Resident's in the Spotlight

Clara Basham

Clara Basham was born on August 24, 1905 in Chatfield, Texas to Bill and Mary Chewming. Her mother was a homemaker and her father was a farmer. Clara has one sister named Luna Callaway who lives in Texas.

Clara worked as a beautician, where she was the owner/operator. She married Ray Taylor and of their marriage they had one son named Bill Taylor who lives in Norman, Oklahoma and years later she married Wylie Basham and of their marriage they had one son named Wylie Basham who lives in Midland, Texas.

Claras' tidbit on life: Just live your own life. Her favorite thing to do at Four Seasons Nursing Center is: "I like to do everything".

Mary Fulton

Mary Fulton was born on May 10, 1919 in Pawhuska, Oklahoma to John and Josephine Murray. She has one brother named John Murray II. Mary worked as an LPN. She married Edward Hines and later in years she married Lyle Fulton. Of these marriages she has 5 children: (2 step-children:Murray Hines who lives in Ft. Worth, Texas and Patrick Hines who lives in Atlanta, Georgia); Jack Fulton who lives in Bartlesville, OK; Deanna Patterson who lives in Oklahoma City, OK and Judith Hall who lives in Moore, OK.

Marys' tidbit on life/family/marriage is: I raised 3 wonderful children and had 2 successful marriages. Make a home for your family, go to church, be involved in their school and interest and I'm just lucky.

Her favorite thing at Four Seasons is:I like to attend exercise class and I love to play Bingo. I enjoy the nurses and many patients, I know when I need lifting

Seasons & Times

Administrator Note by Mary Stacy

The Ten Commandments of Caring

1. Our Residents are the most important people in any nursing center.
2. Our Residents are not dependent on us....we are dependent on them.
3. Our Residents do not interrupt our work....they are the purpose of it.
4. Our Residents do us a favor when they request our assistance. We do not do them a favor by serving them.
5. Our Residents are the most vital part of a nursing center....not outsiders.
6. Our Residents are not collections of charts and prescriptions..they are flesh and blood human beings with feelings and emotions like our own.
7. Our Residents are not ones to argue or match wits with.
8. Our Residents bring us their wants....it is our job to fill those wants.
9. Our Residents are deserving of the most courteous and attentive treatment we can give.
10. Our Residents are the lifeblood of our business.

Merry Christmas to each resident, family member and employee. May the peace be yours that only Christ can bring.

Seasons & Times

Poem of the Month
A Birthday Party

A birthday party is drawing near,
So all men and women be of good cheer.
And giving your children loving care,
Because the Christ child will soon be here.
To spread his love upon the world,
And gently embrace each boy and girl.
He loves them all - the rich and poor; the healthy and lame,
In his eyes they are all the same.
The gifts that we bring him,
We give to each other,
When we remember each man is our brother.
So break out the party favors,
Let our hearts soar,
Because Christ is born,
To save us once more.

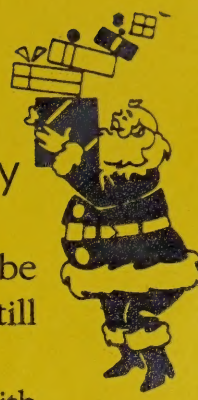
Aloma Turk, RN



Resident Christmas Party

Resident Christmas party will be December 18, 1995. 6:30 p.m. till 8:30 p.m.
A fun-filled evening it will be with Santa Claus and the Cleveland County Brass Band.
Residents will have their evening meal at the regular scheduled time and desserts will be served at the Christmas party.
I ask that personal gifts for your family member be shared at another time, due to some residents whose family may not be at the party to give them a personal gift.
Neva Martin, Activity Director

Employee Christmas Party

Employee Christmas party will be December 12, 1995. 7 p.m. till 12 a.m. at the Moose Lodge.

Spirit of Caring

Get Ready for the Christmas Rush

Approximately 80% of shoppers say that holiday decorations don't affect the date they'll start shopping for Christmas gifts. About 40% of women and 31% of men finish their shopping by mid-December.
Early and mid-autumn serve as the preseason training for the U.S. Postal Service and private carriers. Glance at the approximate number of cards sent during various holidays. Rosh Hashanah 12 million; Halloween 28 million; Thanksgiving 40 million; Christmas 2300 million.

Food for Thought

When speaking of others this day, I pray for a spirit of kindness. May all my conversation be pleasing in Your sight. Amen.

Shopping Cart

Donated items are still being accepted and needed. Please see Neva Martin, Activity Director.

Holiday Snack

Caramel Corn

Ingredients:
9 cups popped popcorn (using no oil)
2/3 cup packed brown sugar
1/3 cup light corn syrup
3 tablespoons margarine
1/2 teaspoon vanilla
1/4 teaspoon baking soda

Remove all unpopped kernels from the popped popcorn. Put popcorn in a 17x12x2-inch baking pan.

Combine the brown sugar, corn syrup, and margarine in a 1 1/2 quart saucepan. Cook and stir over medium heat until margarine melts and mixture boils. Reduce heat to medium-low. Cook, without stirring, 5 minutes more. Remove from heat. Stir in vanilla and baking soda. Pour syrup mixture over popcorn in baking pan and gently stir to coat.
Bake at 300 degrees for 15 minutes; stir. Bake 5 minutes more. Transfer popcorn mixture to a large piece of foil; cool completely. Break into clusters. Store tightly covered. Makes 9 (1-cup) servings.

PREFACE

The supervisor occupies a position of unique importance in our modern industrial system. To the employees his voice is the voice of management, while to higher executives he is the chief avenue of contact with the working force. Wise, carefully planned industrial policies are ineffective unless applied with understanding by all supervisors in the management chain. Supervisors are not merely agents and representatives of management, they are an essential part of management itself.

The objective of the Management Training Program for Supervisors is to bring about a better understanding of the duties and responsibilities of the management group, so that the supervisor can correctly represent the company to his men and direct the work in the most intelligent manner applicable to modern methods.

The supervisor, being the focal point through which transactions pass from the company to the job and worker and in turn from them to the company, is an important part of management in the following respects:

1. Efficient, economic, and effective production methods.
2. Production of quality products.
3. Distribution, protection, and maintenance of materials, machinery, and equipment.
4. Selection and training of personnel.
5. Promotion of morale, company spirit, and pride.
6. Insured cooperation, greater output, and greater harmony.
7. Protection and safety of employees.
8. Create favorable public opinion toward the company.

The worker receives his instruction from the supervisor and the word of the supervisor is the word of the company to him. Supervisors have the responsibility to get production without damage to property, equipment, or injury to the workers. The exchange of ideas concerning the duties and responsibilities of the supervisors, is brought out in the conference in such a manner that each level can benefit from the ideas of others based on the total experience of the individuals of the group. These ideas, practically applied, will improve operations and bring about better understanding and relationships between the management and the employees, and contribute generally to the building and maintenance of a better organization.

M. L. Powers

Management of modern industry occupies a central position between five groups or interests. This position and arrangement is illustrated in Diagram 1. On one side of Management we find the Stockholders, who in the case of some organizations may be the owner, and below Management are the Employees. On one side is the Consumer and across on the other side is the Competitor. The fifth side is represented by Government. In order that an enterprise can continue to function and prosper, the Management must deal with and meet the demands or requirements of each of the groups. Management must reserve enough freedom and latitude for itself so that it will have an opportunity to meet emergencies, to plan new programs and expansion and to grow.

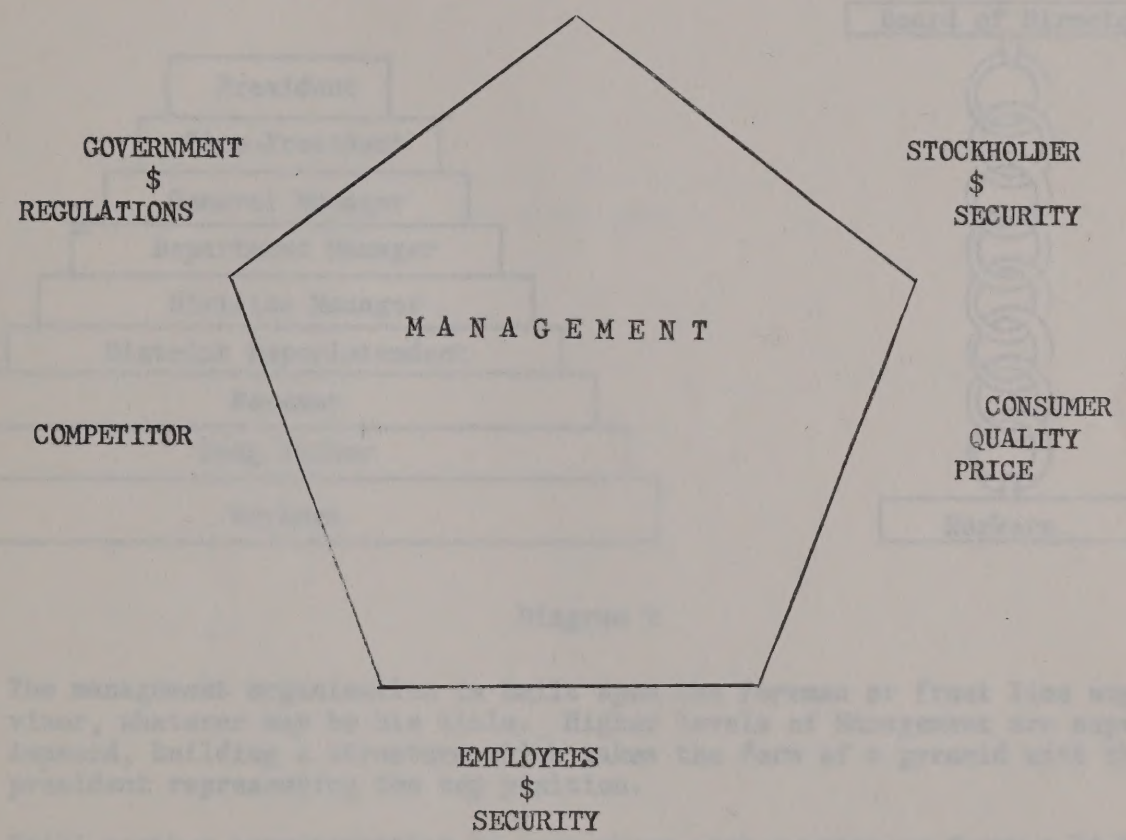

Diagram 1.

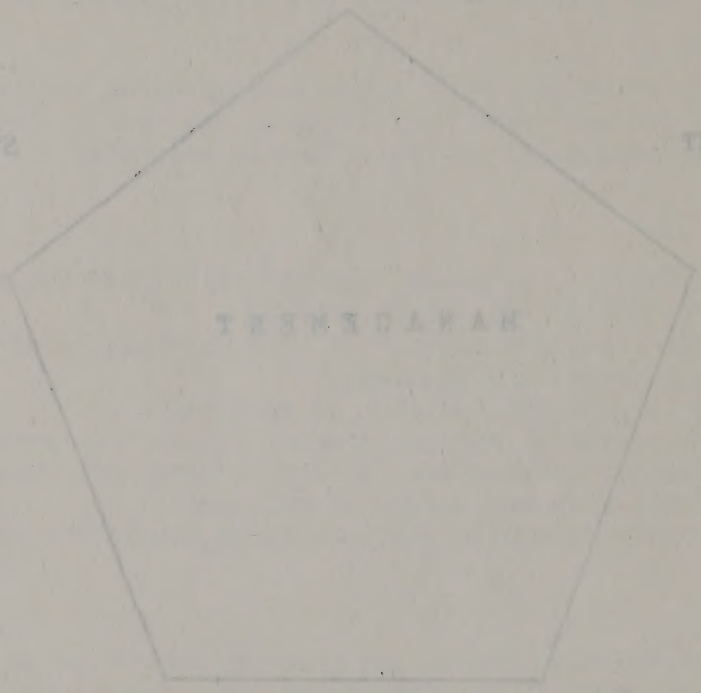
Each group is important and must be given consideration in the plans and aims of Management. The Stockholders have made an investment in the business and have a right to expect a fair return in the form of dividends. In many cases the number of Stockholders will exceed the number of Employees and we find them coming from all walks of life. Many of the Employees are part owners of the business by owning shares of stock. Management has a responsibility to the Stockholders to protect this investment which quite often represents the life savings of an individual, and to conduct the business in such a manner so the Stockholder will realize a fair return. The Employee is interested in a fair



return for his work as well as a safe and respectable place in which to work. He would like to take some pride in being a part of the business. The Consumer expects a good product at a reasonable cost and the Competitor is ever present to see that the Consumer's needs are met. Government on all levels - national, state, and local - has passed laws with which Management must be informed, and to which Management must conform.

Who is Management? This question may be answered by studying a typical organization chart as shown in Diagram 2. This diagram represents a typical organization. The supervisors in your organization may have different titles than those shown in the diagram or there may be more or fewer than shown.

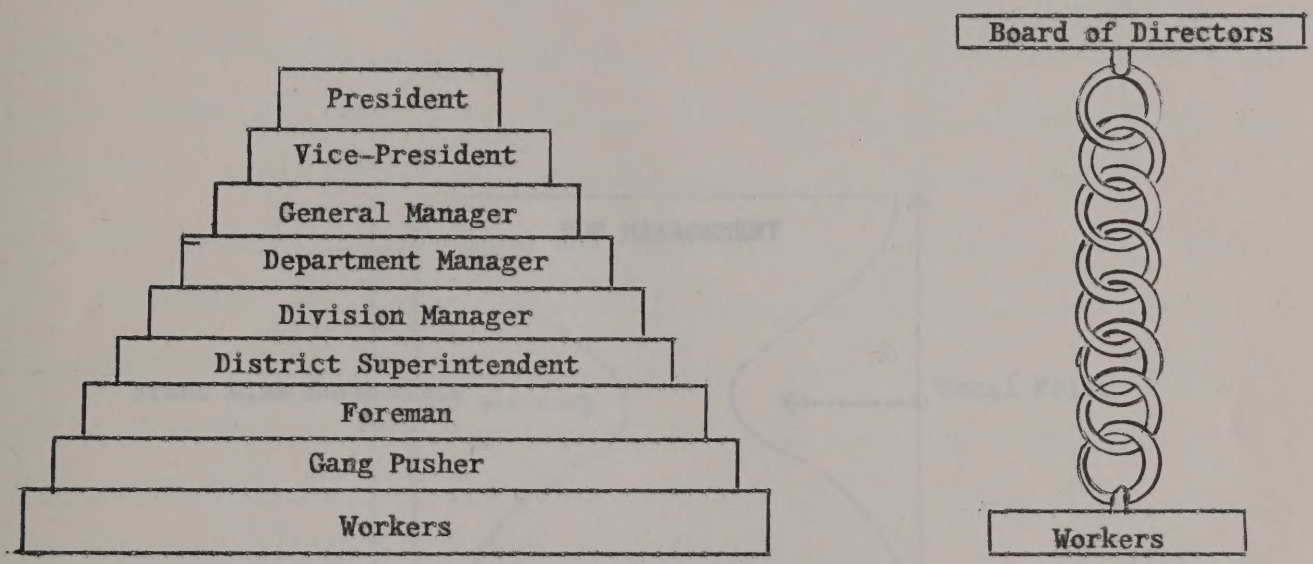


Diagram 2

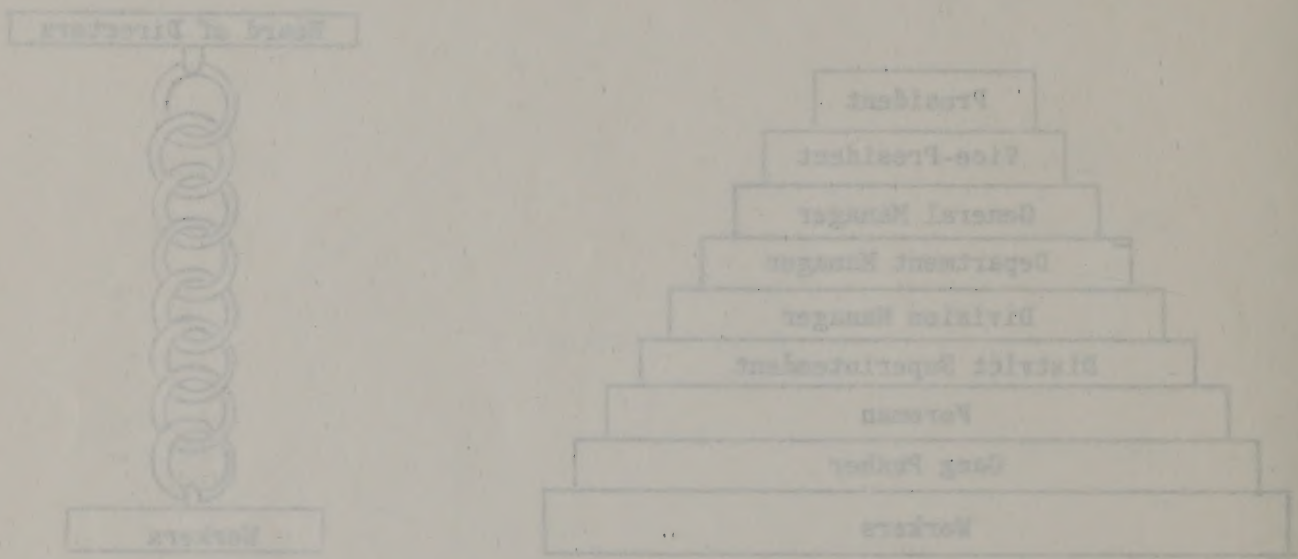
The management organization is built upon the Foreman or front line supervisor, whatever may be his title. Higher levels of Management are superimposed, building a structure which takes the form of a pyramid with the president representing the top position.

Still another representation is seen where each supervisor forms a link in a chain with the Board of Directors representing the Stockholders at the upper end of the chain and the Employees at the lower end.

Thus, the chain is made up of connecting links which in turn tie the Stockholders to the Employees forming one organization. The question may be asked, "How strong is the Chain?" The usual answer to that question is "As strong as the weakest link." The Management is only as strong as the weakest supervisor in that chain.



The Management organization may be illustrated in a different way as shown in Diagram 3. The organization may be compared to the hour glass. The sand falls from the top to the bottom. Thus, the plans, objectives, policies and aims of Management are passed down through the Management Chain, to the Employees. But, in time, the sand has all run through, and the hour glass ceases to function.

In order to replace the hour glass in operation, it must be inverted. The problems, suggestions, reactions, accomplishments, and difficulties of the Employees are passed back through the Management Chain, where they may be considered by the appropriate link or links and new plans made. Thus, in an effective and efficient organization, there must be a communication system, a two-way communication system.

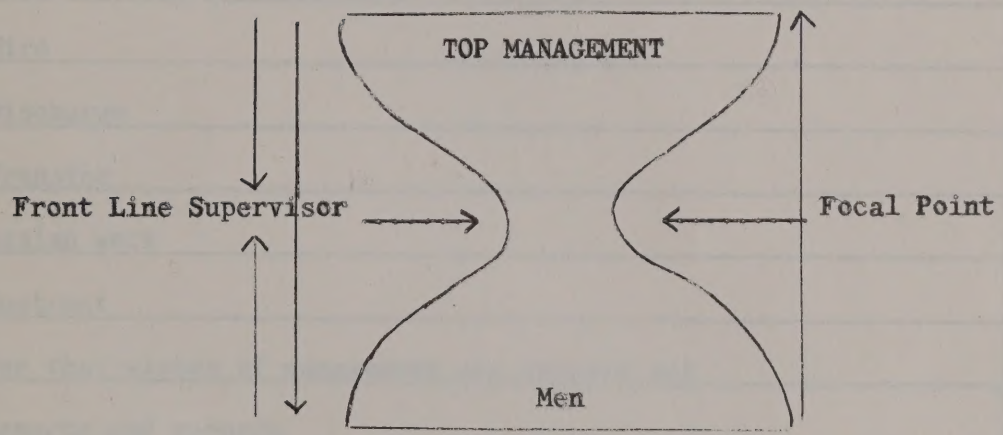


Diagram 3.

The purpose of this conference is then to consider the Management responsibilities of supervisors, and through the exchange of ideas and discussion of problems, improve the efficiency and effectiveness of each supervisor which tends to strengthen the Management Chain.

In order to better understand the problem at hand, it is well that we examine the duties and responsibilities of a supervisor.

DUTIES AND RESPONSIBILITIES OF A SUPERVISOR

		1	2	3
1. Get production	PIC			X O
2. Get a reasonable day's work out of each man	PIC		X O	
3. Keep machinery repaired	PIC	X O		
4. New construction	PIC	X O		
5. Keep harmony among the workers	PIC			X O
6. Get the job done	PIC			X O
7. Keep cost equitable	P			X O
8. Keep men safety conscious	PIC		O	X
9. Hire	P	O X		
10. Discharge	IC	X	O	
11. Transfer	PIC	O X		
12. Assign work	PI	O		X
13. Instruct	I	O		X
14. See that wishes of management are carried out	PIC			X O
15. Reports and records	PIC	O X		
16. Reporting to management about worker's efficiency	P C	X O		
17. Correcting mistakes	IC	X		O
18. Make studies for more efficient operations	PIC			O X
19. Develop new ideas--research	PIC		X	O
20. Purchasing and procuring	P C		X O	
21. Provide safe place for men to work	PIC		X	O
22. Improve operations	PIC			O X
23. Treat men fair	PIC	O	X	
24. Handle grievances	PIC		O X

27. Set a good example	P C		O X	
28. Cooperate with other supervisors	P C		O	X
29. Government regulations	P C		O X	
30. Know or get answers on policies and benefits	P	X	O	
31. Estimating and design	PIC	X		O

X - IMPORTANCE

O - DIFFICULTY

A supervisor may be considered as doing three types of work, or it may be said, that he is doing the work of three different men: a manager, an instructor, and a coordinator. Coordination is defined as securing cooperation of personnel in coordinated effort. In the discharge of his responsibilities, he may act in one or more of these capacities at one time. The three types of responsibilities may be clarified by the following analysis.

TYPES OF SUPERVISORY EFFORT

PLANNING	INSTRUCTING	COORDINATING
1. Determine aims and objectives of management.	1. Give employees instructions as necessary for work to proceed as planned.	1. Secure the cooperation of employees in working together.
2. Make plans to carry out management's aims effectively and efficiently.	2. Train employees both as to "how" and "why" so as to develop an efficient working group.	2. See that work is done according to plan.
3. Keep up-to-date on work methods and procedures.	3. Orient and break in new employees.	3. See that every employee understands the purpose of his job in the whole effort
4. Keep himself informed as to his responsibility.	4. Provide for employee growth and development.	4. Make necessary adjustment to insure an even running organization.
5. Make plans to develop and strengthen his organization.	5. Instruct employees on plans, policies, and aims of management.	5. Take notice of the personal improvement of employees.

In the whole scheme of Management, some of the duties and responsibilities assume a position of greater importance than do others. In order to determine those of greater importance, each was rated comparatively from "1" to "3". A rating of "3" indicates greater importance and "1" less importance

IMPORTANCE_____

The supervisor will experience more or less difficulty in discharging each of his responsibilities. Those responsibilities in which greater difficulty is experienced are marked in the "3" column. Other responsibilities are rated comparatively from "1" to "3".

Difficulty ___ ___ ___ ___ ___ ___ ___ ___ ___ ___

It is interesting to compare the activity of a worker with that of a supervisor. Supervisors usually come from the worker group. For some reason, someone is caused to believe that a particular worker will make a good supervisor and a promotion results. Immediately, this new man is expected to take over the duties and responsibilities of the new position which is quite different from his other job. A chart was developed to compare the differences in the two kinds of work.

WORKER	SUPERVISOR
DO Performs manual labor	Gets men to do work
TOOLS Hands, body, mind, and mechanical tools	Men
SKILL Manual skill and know how	SKILL Planning Instructing Coordinating KNOWLEDGE Of his responsibilities Of the work

One of the skills required of the supervisor is skill in securing cooperation of the personnel in working together which means skills in getting people to work together willingly toward the accomplishment of an aim. This skill could also be described as a skill in leading people.

LEADERSHIP DEFINED -

1. Ability to instruct
2. Ability to get the men to follow your orders willingly
3. Ability to get the confidence of the workers

One of the important factors in leading people is the ability to get people to do things because they want to. It is well that we consider why people want to do certain things. People want to do because of different reasons. An important underlying reason is that people have certain basic wants and when the requirements of these wants are being met through the accomplishment of objectives set by the leader, then the leader is exercising effective leadership.

The things that other people want are the same things that we want. Let us consider, then, these things which we want.

WHAT DO WE WANT?

1. Security
2. Responsibility
3. Recognition
4. Authority--power
5. Good working conditions
6. Opportunity to advance
7. Good girls
8. Job personal satisfaction
9. Money
10. Safe working conditions
11. Good, sufficient supplies and equipment
12. Promotion
13. Backing, as a supervisor
14. Harmonious working conditions
15. Good will of everybody
16. General success in life
17. Plenty of work
18. Paid vacation (long)

19. Plenty of night life

20. Conscience void of offense

21. Peace of mind

22. Good boss

23. Comfortable home (paid for)

24. Good health

25. Kids--family

26. Good neighbors

27. Good schools

28. Good churches

29. Good city government

30. Life insurance

31. Good political leaders

32. World peace

33. Food

There is some overlapping and duplication of the items listed. These may be grouped and combined into a shorter list. The six items next were presented and it was agreed that all of the items in the longer list were provided for in the six items.

BASIC WANTS - MOTIVATING FORCE

1. Food, Clothing & Shelter

2. Recognition, Feeling of Importance or Worth, Social Approval - Power

3. Security and/or Peace of Mind

4. Pride in Accomplishment

5. Family

6. Change or New Experience

The first item, Food, Clothing and Shelter, needs no further explanation. It is recognized that this is of first importance. We concentrate all of our efforts and energies upon this item until we are at least assured of

the minimum requirements. The other wants are important in the industrial organization, and an analysis of each of these follows, first setting out the evidence of each want to establish the importance to the individual, and then considering ways and means which the supervisor may see that the employee or others under his supervision may satisfy this particular want on the job.

RECOGNITION

EVIDENCE ON OR OFF THE JOB	HOW SUPERVISOR CAN APPLY ON THE JOB
1. Try to get their name in the paper	1. Brag on his work
2. Work hard	2. Post records of scrap
3. Daredevil drivers	3. Post % of recovery
4. Do a job recklessly	4. Speak to him
5. Horseplay	5. Address the men in a friendly and courteous manner
6. Get sick--act sick	6. Let the men know about the safety of the department
7. Wear flashy clothes	7. Show concern for his and his family's health
8. Boasting	8. Welcome suggestions--explain <u>why</u> if not used
9. Liar--fish stories	9. Let the man know upper supervisor knows about his suggestions
10. Live beyond their means	10. Certificate of suggestion
11. Act the life of the party	11. Service Awards
12. Self sacrifice	12. Get his name in company publications
13. Try to keep up with the Joneses	13. Better job, pay, advancement, title
14. Works on fund raising drives	14. Bonus for exceeding standard work day
15. Makes big donations when it is known	15. Time off for representatives of the group
16. Honest practices	16. Discuss his problems with him
17. Go to church	
18. Holler real loud	
19. Join Civic Clubs	
20. Run for office	

SECURITY AND/OR PEACE OF MIND

EVIDENCE ON OR OFF THE JOB	HOW SUPERVISOR CAN APPLY ON THE JOB
1. Buy life insurance	1. Reassure him if he is a good worker
2. Buy retirement insurance	2. Keep the company in a sound condition
3. Buy homes	3. Help keep the company progressive
4. Buy property	4. Job training
5. Save money	5. Encourage him to get more education
6. Go to church	6. Encourage him to buy a home
7. Entertain	7. Encourage him to participate in company benefit programs (a) Life Insurance (b) Hospitalization (c) Retirement (d) Compensation (e) Bond deduction (f) Protective clothing and equipment (g) Training programs (h) Recreation (i) Unemployment insurance (j) Social security (k) Draft or Enlistment (l) Paid vacations (m) Scholarship program
8. Acquiring more education	
9. Ask about benefit plans	
10. Seek or ask for more benefits	
11. Change jobs	
12. Work towards success	
13. Does his job well	
14. Seeks a job that does not require physical strain	
15. Sticks to his job	
16. Seek favors from boss	
17. Does favors for the boss	
18. Marry the Boss's daughter	

PRIDE IN ACCOMPLISHMENT

EVIDENCE ON OR OFF THE JOB	HOW SUPERVISOR CAN APPLY ON THE JOB
1. Brag on his work	1. Compliment him--tell him he did a good job
2. Assertion of ability	2. Show him how to do a good job
3. Goes about his work in a confident manner	

4. Takes pains to do his job neatly	3. Educate him that he is working for a good company
5. Work conscientiously	4. Educate him on importance of job
6. Stand off and admire	5. Explain the "why"
7. Look at it	6. Allow time to do a good job
8. Keep things neat and in top condition	
9. Ask if job is satisfactory	
10. Tries to do better	
11. Personal dress	
12. The way he talks about his company	

FAMILY

EVIDENCE ON OR OFF THE JOB	HOW SUPERVISOR CAN APPLY ON THE JOB
1. Gets a family	1. Interview the man and the wife
2. Show pictures of family	2. Discuss his problem with him
3. Talks about his family	3. Ask him what is the matter
4. Provides for them	4. Inquire about his family's health
5. Health of them	5. Visit with them when you meet them
6. Educates them	6. Hold programs for the family
7. Devotes free time to them	7. Hold open house
8. Unhappy home life shows in his work	8. Keep in touch with retired men
9. Works steady and sacrifices	9. Hold family picnics and parties
	10. Furnish hospitalization insurance
	11. Brag on their families
	12. Hire their family

CHANGE OR NEW EXPERIENCE

EVIDENCE ON OR OFF THE JOB	HOW SUPERVISOR CAN APPLY ON THE JOB
1. Ask for promotion	1. Pull him off his work--switch to job work for awhile

2. Ask for change of job	2. Rotate certain duties among the men
3. Transfer	3. Some cases might transfer men
4. Some bid on every job	4. Penalize for absenteeism
5. Change company	5. Give hime some pointers to help him out
6. Talk about another job somewhere else	6. Encourage him to take more education
7. Train to qualify for other jobs	7. Give him help on courses
8. Trade jobs for tryouts	8. Favor families where possible
9. Correspondence courses and education	9. Encourage hobbies
10. Experimenting	
11. Move to different parts of the country	
12. Drinks excessively	
13. Misses work frequently	
14. Pursues hobbies	
15. Vacation	

The cause of personnel problems can be traced in nearly all cases to the failure of the individual to receive satisfaction in one or more of the basic wants. A supervisor who recognizes the importance of the basic wants and can take steps to see that those under his supervision find satisfaction in working for or with him, is one of the better supervisors. When a supervisor tries to the best of his ability to cause people to strive for accomplishment and work together toward a common objective, he will reduce or eliminate his personnel problems. These problems require careful attention of the supervisor and his best judgment and effort in an attempt to bring about adjustments which will lead to satisfaction. The following chart of the supervisor's relationship to his job and the people he supervises was developed.

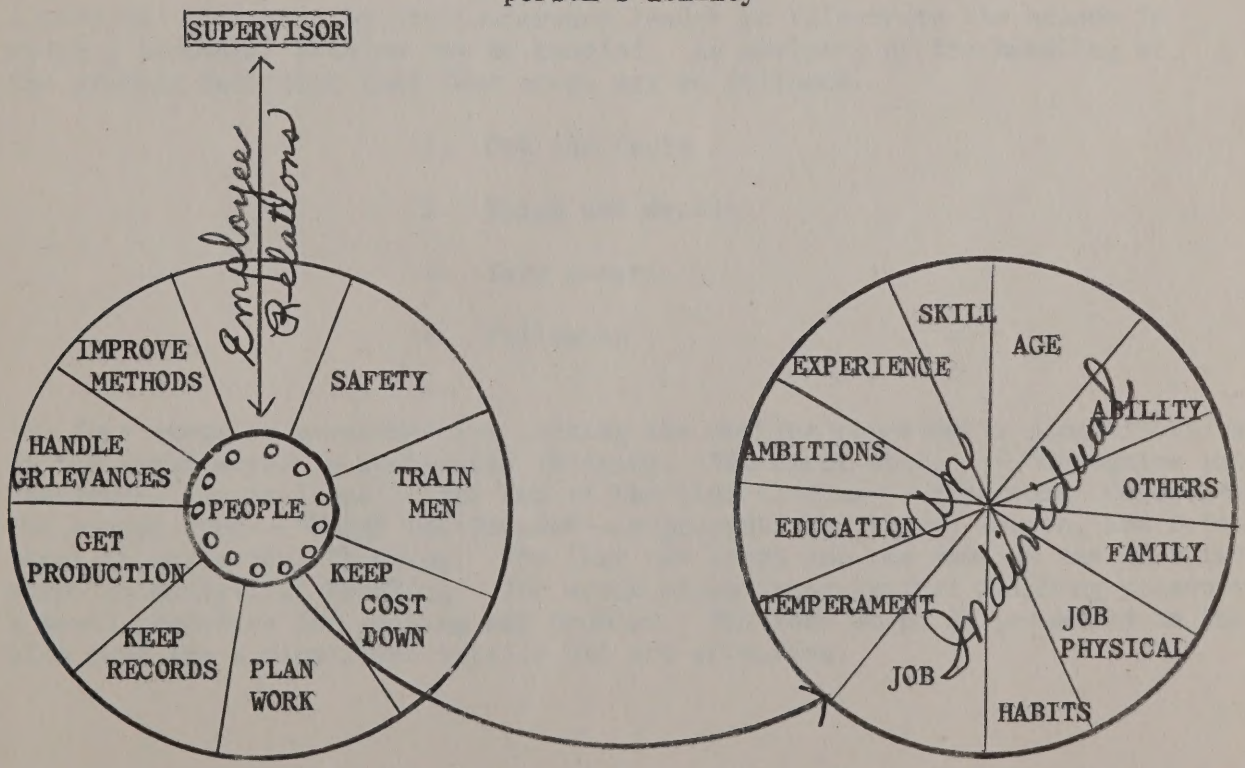
HOW A SUPERVISOR MEETS HIS RESPONSIBILITY THROUGH PEOPLE

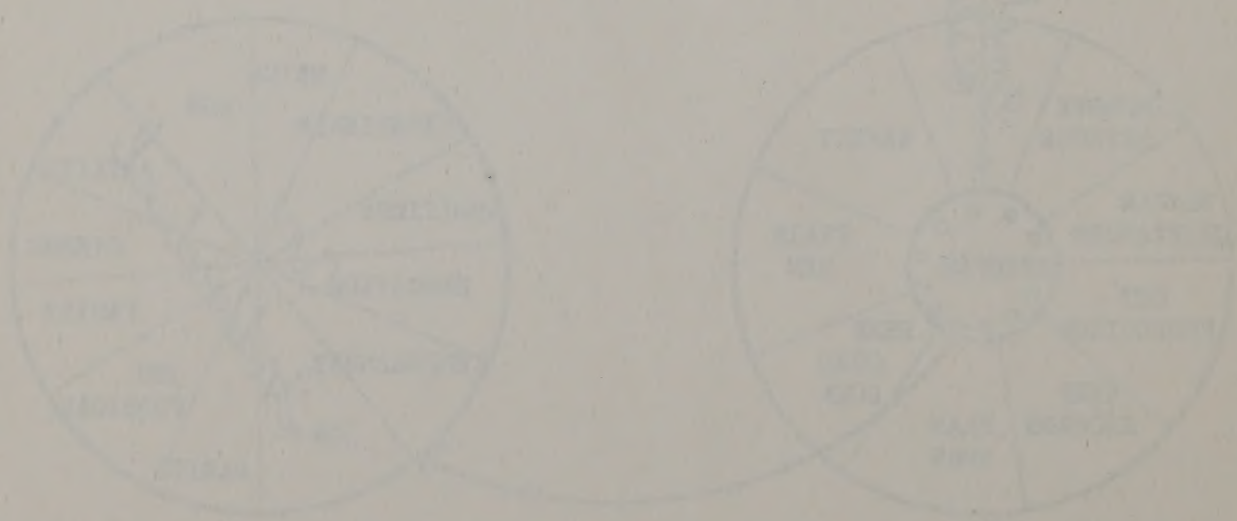
A supervisor gets results through people

Foundations of Good Relations

1. Let each worker know how he is getting along
2. Give credit when due
3. Tell people in advance about changes that will affect them
4. Make the best use of each person's ability

People must be treated as individuals





The Employee Relations line, or the line between the Supervisor and those people he supervises, should have arrows on both ends. The arrows indicate a two-way exchange between the Supervisor and the People - from the Supervisor to the People, and from the People to the Supervisor.

The results obtained by the Supervisor depend upon the relationship between the supervisor and those supervised.

GOOD RELATIONS GET GOOD RESULTS AND POOR RELATIONS GET POOR RESULTS.

The relationships between the supervisor and the employee are a day to day matter and change constantly as situations arise. Employee relations depend upon how the supervisor handles these situations.

Many of the situations may be problems. A problem may be defined as:

ANYTHING WHERE A SUPERVISOR MUST MAKE A DECISION AND TAKE ACTION.

A case was presented by the conference leader to illustrate the manner in which a personnel problem may be handled. An analysis of the handling of the problem indicated that four steps may be followed.

1. Get the facts
2. Weigh and decide
3. Take action
4. Follow-up

The four steps as presented for solving the problem represent a simplification of the seven steps in Analytical Thinking. The first step, ----"Recognize the Problem"--- is included at the top of the blue card as ---"Determine Objective". The second step---"Weigh and Decide"---represents the third, fourth, and fifth steps in Analytical Thinking. The last two steps are the same as the last two steps in Analytical Thinking. The seven steps in Analytical Thinking presents a sound procedure for solving any problem. The four steps as presented on the blue card are a simplified version and are effective.

ANALYTICAL THINKING

1. Recognize the problem
2. Accumulate all functioning data
3. Study data
4. Arrange data in order of importance
5. Make plan or schedule
6. Take action
7. Check results and make adjustments

There are other processes of thinking which should be mentioned----the Inductive-Deductive Process and the Memory Process are used in many situations. It should be noted that the emotional process of thinking is the least sound and is the one probably used to a greater extent than any of the others. The Supervisor should be aware of this fact and not allow emotions to influence his thinking through a problem. He should also take this into account when he is trying to get the facts in any problem and especially a personnel problem.

A. Inductive-Deductive or Reasoning

B. Memory

C. Emotional

Supervisors encounter problems in different ways. Four common means by which supervisors find problems are:

1. Tipped off or senses it.
2. It comes to him.
3. The Supervisor anticipates the problem.
4. It blows up in his face.

Objectives

1. _____
2. _____
3. _____

How to Handle a Problem

1. Get the facts
2. Weigh and Decide
3. Take action
4. Check results

Facts:

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____
11. _____
12. _____

Possible Actions:

1. _____
2. _____
3. _____

Action:

_____

Follow-up:

_____

_____

_____

_____

_____

When an supervisor investigates a case in an effort to be sure he has all the facts, it is necessary that he take into consideration opinions and feelings.

Opinions and feelings are sometimes hard to get but they are important. If a person "thinks" that a certain thing is wrong, or a situation exists, it is just as important to him and has the same effect as if it were true.

HOW TO GET OPINIONS AND FEELINGS

1. Don't argue.
2. Encourage him to talk about the things that are important to him.
3. Don't interrupt.
4. Don't jump at conclusions.
5. Don't do all the talking yourself.
6. Listen

The four step method was used in analyzing the second case presented by the conference leader and further experience was gained in the use of the four step method in studying cases presented by the members of the group.

It was pointed out that people are more or less alike in that they all have certain basic wants. In many respects, people are different and it is again emphasized that people must be treated as individuals.

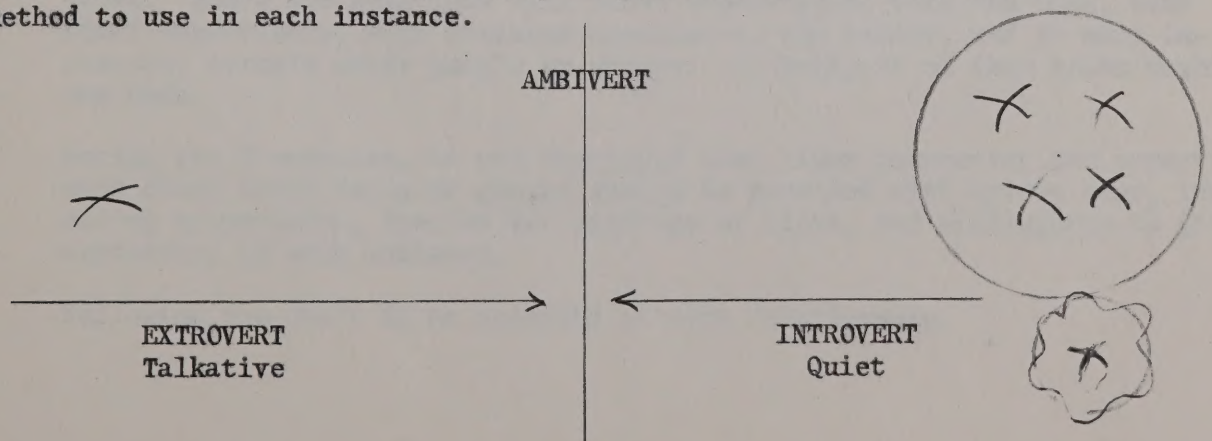
The supervisor who is successful in dealing with people is the one who has the ability to recognize the difference in people and adapt his methods to each individual.

We have all had experience in dealing with people and we have learned to some extent to identify and deal with the different types. The following is a list of types of individuals with whom we have had contact.

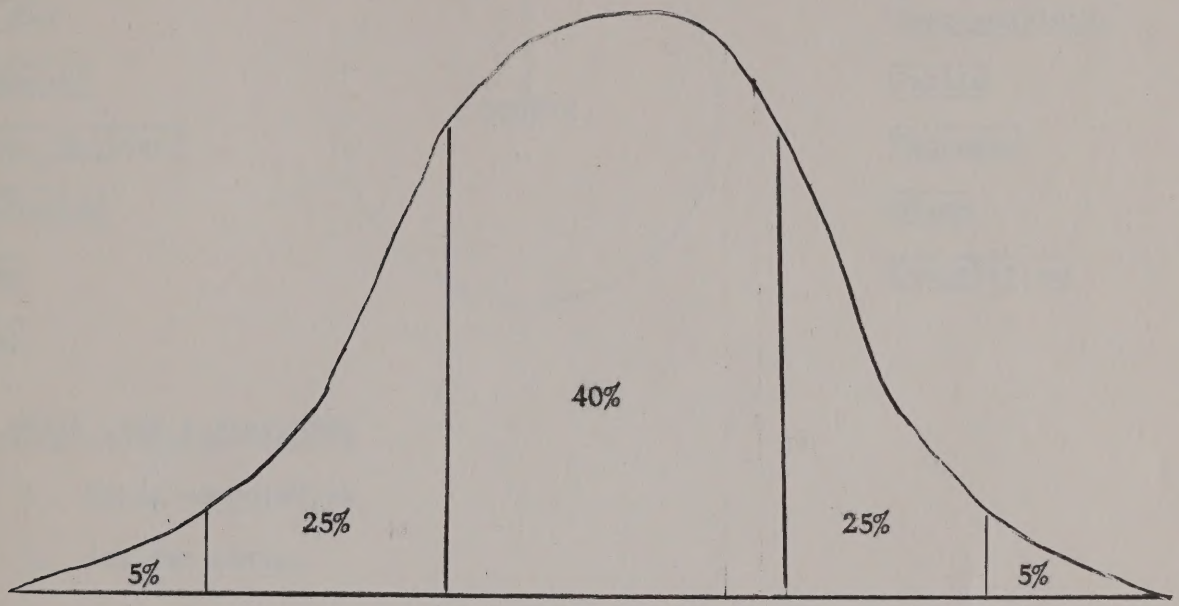
TYPES OF PEOPLE

1. Quiet
2. Good natured
3. Mean SOB
4. Indifferent
5. Sentimental
6. Overbearing
7. Sincere
8. Boastful
9. Stupid
10. Nervous
11. Wishy washy
12. Hypocritical
13. Friendly
14. Gregarious
15. Surly
16. Stubborn
17. Ambitious
18. Lazy
19. Shiftless
20. Studious
21. Energetic
22. Sissy
23. Square
24. Crooks
25. Sickly and puny
26. Robust
27. Dumb
28. Screwball
29. Egotist
30. Irresponsible
31. Sore head
32. Introvert
33. Extrovert

Several types were selected for further study. It should be pointed out that even though we identify a person as one type, that he is in fact a combination of types and care should be taken in trying to standardize too closely the manner of handling people according to type, but instead each case should be analyzed as carefully as possible to determine the best method to use in each instance.



To further emphasize the fact that people are different, the curve of normal distribution was presented. The curve illustrates graphically how human traits and characteristics are distributed among a large number of people. The fact that heights of one hundred men were used to develop the curve has no significance other than that height is a human characteristic, and a convenient example. Height does not necessarily have any relationship to any other characteristic or trait.



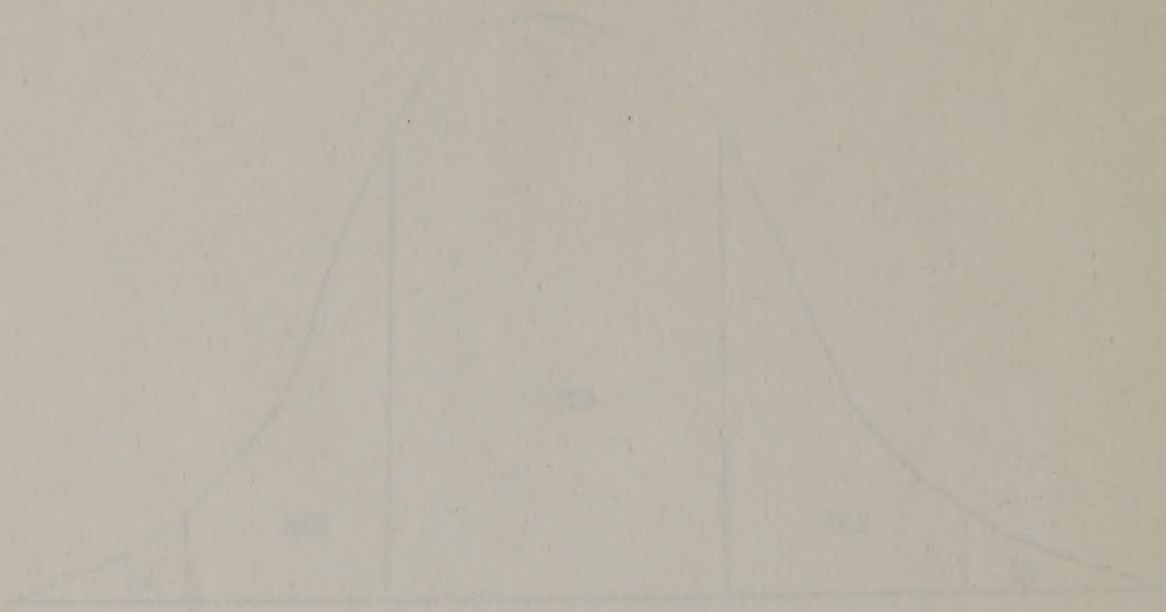
NORMAL DISTRIBUTION

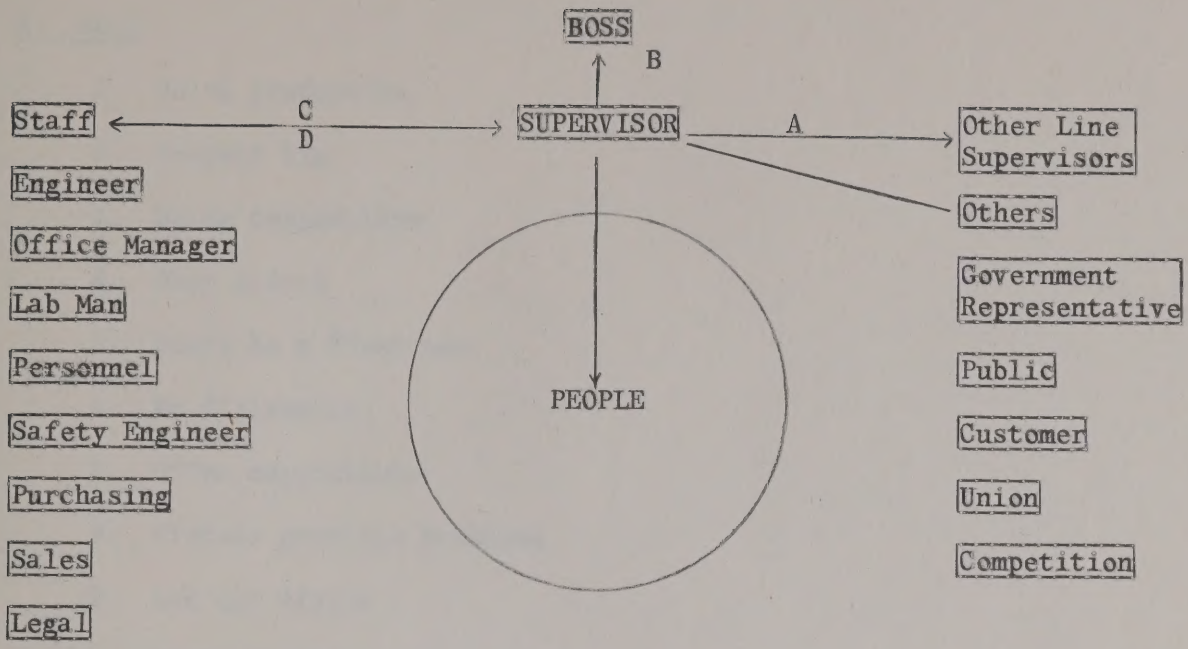
OTHER SUPERVISORY RELATIONS

The supervisor has relationships with people other than those he supervises. There are relations with other supervisors, with the boss, with staff supervisors, with business associates, the public, and in many instances, certain other people or groups. An analysis of this relationship was made.

During the discussion, it was developed that lines connecting the supervisor with other individuals or groups should be provided with arrows also, indicating cooperation, freedom for exchange of ideas, and willingness to give assistance in each instance.

Following the chart is an analysis of each relationship.





A. OTHER LINE SUPERVISORS

1. Being cooperative
2. Ask for advice
3. Do favors
4. Friendliness
5. Counseling with him
6. Give credit where credit is due
7. Ask him to do something for you
8. Discuss mutual objectives
9. Discuss mutual problems
10. Be interested in his well being and family
11. Don't degrade to the boss
12. Don't loan him money
13. Respect his authority
14. Let them know you are aware of their good work

B. BOSS

1. Being productive
2. Respect him
3. Being cooperative
4. Obey orders
5. Don't be a "Yes" man
6. Be diplomatic
7. Offer suggestions
8. Discuss possible problems
9. Ask for advice
10. Don't borrow money
11. Place company interest first
12. Don't bother him with petty problems
13. Get along with other people
14. Respect his idiosyncrasies
15. Play golf with him
16. Stay sober
17. Show initiative and aggressiveness

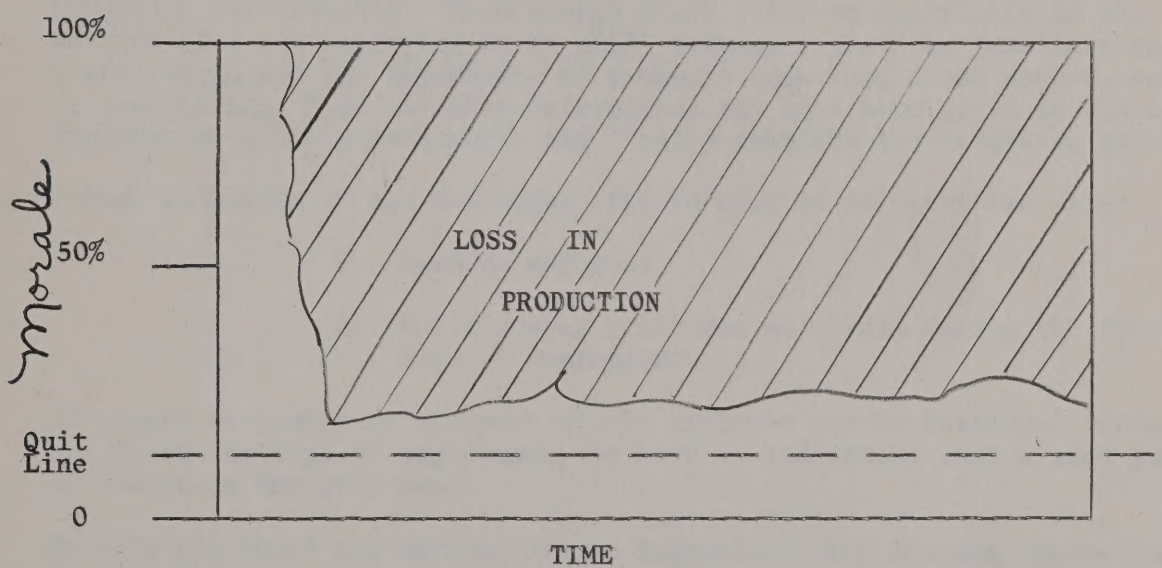
C. LINE TO STAFF

1. Respect him by showing it
2. Be cooperative
3. Take our problems and ideas to him
4. Make your experience available
5. Meet him on social level
6. Be friendly
7. Asks favors
8. Be courteous

INDUCTION OF NEW EMPLOYEES

When a new employee reports for work in a great majority of cases, his morale is high - he is anxious to make good on a new job - he is filled with anticipation wondering what new experiences lie before him. He is wondering what kind of an organization he is getting into.

Things begin to happen immediately. The following chart portrays graphically what happens to his morale. The base line represents time and the vertical line represents morale. The new employee going to work has 100% morale. It is possible, due to poor supervision, for morale to drop sharply during the first day or the second day where some level will be reached. The dotted line running horizontally represents the Quit line. This is a floating line. In times when jobs are easy to get, the quit line rises. In situations like 1933, the quit line was very low. Morale had to almost reach the "0" point before a man would leave a job and a payroll.



Seniority, retirement programs, and other benefit programs have a depressing effect on the quit line. When the employee attains 15 years or more service and can see retirement and other benefits, the quit line drops and he begins to count the days until he reaches the retirement age.

How can we compare the production of an employee whose morale has dropped 50%? What is the relationship between production and morale? Is it possible that and employee with a morale at 50% will actually produce only about 50% of what he is capable? If so, the losses due to low morale are tremendous. Take the case of an employee employed at the rate of $300.00 per month whose morale dropped to the 50% mark and whose production is probably off 50%. The loss in production would amount to $1800.00 per year, or $36,000.00 over a 20 year period. It could be that it would be profitable to spend say 30 minutes of the supervisor's time doing a better job of properly inducting new employees.

The matter of putting a new employee to work is important. Many companies have recognized the importance of properly inducting new employees and have had Induction Training Programs for quite a long time.

Induction Training Programs vary quite a bit from one company to another. In some companies a very short time is spent, 30 minutes or more, while in others, as much as a week is spent before the employee actually goes to work.

One of the companies in the latter group is a power and light company operating in the western part of the country. After the new employee has been hired, he learns about various departments in the organization, about the company's policies, and something about the work that goes on in the field.

Finally he is introduced to his job, and by this time, he has an understanding of how his job fits into the organization and the importance of doing his job well.

At this point, training for the job begins.

The relationship between the employee and his immediate supervisor is the important relationship. Even though staff officers contribute to the induction of a new employee, it is still necessary that the immediate supervisor recognizes the importance of properly inducting a new worker, and by questioning, find out what information may have been given to the new employee by other supervisors, and finally complete the induction procedure.

Proper induction of new employees affects cost in at least two ways:

1. Reduced turnover

2. Build proper attitudes or morale during the first days of employment

If proper attitudes on the part of the employee can be developed during the first few days of employment, we have an indication that a good job of induction has been done.

We have all heard the saying, "First impressions are lasting impressions." The purpose of induction training is to create a good first impression.

In order to stimulate our thinking, let us try to recall some of the things that were done when we were first employed on a job, which may be good, or may serve to suggest things that should not have been done, or things that have been done in the case of others who went to work on a new job.

WHAT WE WOULD LIKE TO HAVE DONE WHEN STARTING ON A NEW JOB

1. Know something about my boss
2. Outline of duties and responsibilities
3. Be made feel at home and a part of the organization - welcome
4. The importance of my job impressed upon me
5. Be introduced to fellow workers
6. Purpose or ultimate objective of company
7. Know how my job fits into other functions
8. Requirements for advancement
9. Know actual working policies and practices
10. Boss assures me that I could bring my problems in
11. Tour around the plant
12. How to get safety equipment
13. About pay and wages--How figured--When pay day
14. Where and when to report for duty
15. What is expected of me
16. Know about benefits
17. Hours of work--days off
18. What tools required to keep in good condition
19. Where the tools come from
20. Indicate that he thinks I can do this job
21. What's the work to be done
22. Who to look to when my supervisor is not around
23. What to do if I get hurt
24. Toilet facilities--where do we eat and when--showers--lockers
25. What the housekeeping rules are

We say that we would like to have all these things done for us when we start on a new job. Others want the same things that we want. An effective induction program should include all of the things in the preceding list. Attention should be given to the order in which the various things are done remembering our objective to make the best possible impression on the new employee starting him off with a feeling that he has gone to work for a good company and that he likes his job and the company.

In developing the following induction procedure it was assumed that the induction was being done by a supervisor who was not connected in any way with the interview or any processing of the new employee prior to his reporting for duty. It is also recommended that the actual induction be done by the immediate supervisor. If a higher supervisor does part of the induction that part must necessarily be repeated by the immediate supervisor. The important relationship in the organization is between each employee and his immediate supervisor.

A. INDUCTION PROCEDURE

1. Introduce self - greet him - put him at ease - find out about him, family, house, living conditions, where worked, what he did, his interests, hobbies, what he would like to do.

2. Explain pay, payday, - how he is to be paid

3. Explain company benefit plans

4. Explain about company - what it does, history, position in industry, objective - stability - policies - rules and regulations - union- opportunity for advancement

5. Explain his duties fully - who he is responsible to and for - directly or indirectly. Explain line of authority, where he will work -- transportation. Explain what goes on at this location and importance of his job to whole effort. Explain tools and equipment, hazards and safety program

6. Introductions to men, fellow workers, boss - explain their jobs - orient to surroundings

B. GIVE WORK ASSIGNMENT

1. Orient him thoroughly on job

2. Explain duties and responsibilities thoroughly. Be willing to answer questions if they should arise

C. FOLLOW-UP

1. That evening - find out how he made it - any questions

2. Next day - do the same and do it daily for a while - see how he fits into organization

3. One to three weeks general review and evaluation

4. Five to six weeks - definite evaluation

SUMMARY

One of the important functions of the supervisor as a part of Management is to get people to work together to meet a common objective.

Leadership is the getting of people to work because they want to.

Effective leading requires an understanding of basic wants.

Personnel Problems usually are caused by someone failing to take basic wants into consideration.

The four-step method of analyzing a problem is a good method for arriving at a good solution.

People are individuals and must be treated as such.

The best time to build morale in employees is when they first go to work.

Training is another function of the supervisor.

Giving employees effective instructions is another skill required of the supervisor and the development of this skill by the supervisor will require as much study and effort as the skill in handling people.

The better the job of training is done, the less coordination is required, and the more time the supervisor has for planning.

MONEY IS MADE BY PLANNING.

ACME FOUNDRY and MACHINE CO.
Lyle K. Fulton

June 8, 1963

BACKGROUND INFORMATION

Lyle K. Fulton, 53, lives at 921 N A Street in Blackwell, Oklahoma. His telephone number is EM 3-1148.

Family History:

Lyle Fulton was born on a farm near Swanwick, Illinois, about fifty miles from St. Louis. He later moved to Aurora, Nebraska, where he had most of his public schooling. He graduated from high school at Giltner, Nebraska. His parents are both living and have lived together all of his life. His father is eighty-two and his mother is eighty. His father formerly was employed with a Glass Plant and is presently Court House Caretaker. Mr. Fulton has two brothers and two sisters. One of his brothers is employed by Acme Foundry as a Foreman and the other is with Continental Can Company.

Employment History:

From January, 1927, to July, 1928, Lyle Fulton was employed by the Hazelatlas Glass Company of Blackwell, Oklahoma. He left this position when the plant was shut down.

Mr. Fulton has been with the Acme Foundry & Machine Company since August, 1928. He held the position of molder until June 16, 1941, at which time he was promoted to the position of Foundry Superintendent, the position he now holds.

Personal History:

Lyle Fulton earns $196 per week plus an annual bonus of $3200 at the Acme Foundry. He carries $15,000 in life insurance, has $5,000 in liquid assets, owns a home worth $15,000 which is free from debt and drives a 1962 Bonneville which is also free of debt. He has no long term debts.

Mr. Fulton was married in 1930. He and his wife had two children, a boy and a girl. The boy is now 30 years old and the girl is 22. His wife died in 1961 and Mr. Fulton married again. He married a widow with three children. His present wife was employed as a practical nurse until their marriage.

Fulton is 5' 11" in height and weighs 150 pounds. He had a physical examination in January of 1962 for taking out a life insurance policy and was issued the insurance at standard rates. He has had no days off work in the past two years on account of illness and has had no serious illnesses other than childhood diseases. He did have an ear operation, a fenestration.

Mr. Fulton has never been arrested, has never had an automobile accident and has never received a ticket for a traffic violation.

Social History:

Lyle Fulton and his wife enjoy bowling for relaxation and belong to the Country Club. Fulton is a "championship" bowler and recently placed in a National Tournament.

He belongs to the Presbyterian Church and his wife belongs to the Catholic Church. He enjoys a social drink but has never had any trouble with alcohol. He and his wife have company about once a week and go out several times a week.

ANALYSIS OF TESTS AND INVENTORIES

The plotted points on the profile on the opposite page represent distances along the base of a normal probability distribution of the scores of men in general (except for interests where the scores are compared to men known to have been successful in the various fields shown, Occupational Level, however, is in comparison to men in general on the Interest Profile).

The double red lines block off areas in which none of the 209 men in our research group scored. These 209 men were at the top two echelons of management. However, some men in the third echelons of management scored in the zones blocked off by the double red lines.

The two red asterisks or stars delineate the middle two-thirds of the sample of top executives and the average of these top executives is half-way between the two red asterisks.

The per cent (at the left), indicates the percentage of the general population which this person's score exceeds (or in the case of Interest that percentage of the success group which the score exceeds).

Further information about the profile is shown in the legend at the lower left hand side of the profile. The sample, however, has been increased in number since this profile was printed.

Basic Tests:

Lyle Fulton shows a mental efficiency total score slightly below average for the general population. However, his score for the quantitative problems equalled average and reached into the range of our executive standards but his score for the verbal-logical problems dropped lower and exceeded 31% of men in general. However, this may be due to limited reading speed and limited vocabulary since on a verbal-logical test there is always the possibility that slow reading speed and limited vocabulary may prevent good performance. On the no-time-limit test Fulton rose to above average levels and reached the executive range. On the verbal-logical problems he reached the low end of the middle two-thrids of the executive range.

His principal limitation was in the area of vocabulary where he exceeded only 62% of men in general, a score which is outside the range ofour executive sample. This suggests the need of improvement in vocabulary which is covered later in this report.

N.S. Not Significant

This profile shows this person's scores in comparison to men in general, with executive zones derived from the study of 157 management men. For all scores except Interests the asterisks * * show scoring zones of the middle ⅔ of 52 top management men and red lines show scoring areas outside of their range. Interest scores of 40 or higher are considered significant and 94% of top executives showed 3 or more such scores, 60% showing 4 or more. In a non-executive control group only 15% showed 3 or more significant scores. Occupational Level employs asterisks and red lines. Ratings at right match the total profile to areas of executive activity. "6" is highest, average lies between 3 and 4. "Interviewer's Rating" represents opinion concerning past performance and background.

NAME Lyle K. Fulton

AGE 53 DATE 6-8-63 ACME FOUNDRY

Mental Functioning

	VERY LOW	LOW	LOW-AVERAGE	HIGH-AVERAGE	HIGH	VERY HIGH
THEORETICAL - thinks in broad, over-all terms; sees abstract principles (W)	25	35	45 ✓	55	65	75
PRACTICAL - thinks in concrete, practical terms, sees detail (D)				✓		
PEDANTIC - thinks in precise, perfectionist way; sees minute detail (Dd)			✓			
INDUCTION - sees principles, general rules from specific experience (W:M)1				✓		
DEDUCTION - draws logical conclusions from general rules (D:M)1				✓		
RIGIDITY - tends toward dogmatic or fixed ideas despite evidence (S)	25	35 ✓	45	55	65	75
STRUCTURING - employs systematic approach to problem-solving (F)			✓			
CONCENTRATION - Can avoid distractions (inside or outside self) (F-:F) 2			✓			

Factors Limiting Mental Performance (if none are checked there are no limiting factors)

LOW GENERALIZATION - has difficulty seeing principles, policies (W-42)	25	35	45	55	65	75
PERFECTIONISM - gets lost in petty detail, minutiae (Dd +63)						
POOR CONTROL - tends to have difficulty concentrating (F- +57)						
HIGH ANXIETY - waivers, distrusts own conclusions, insecure (Fch +63)	25	35	45	55	65	75
COMPULSIVITY - over-conformist in thinking; closed mind (S+F+Dd/3=+57)						

Temperament

Note: These factors represent deep inner feelings for for which there are often compensations in behavior

PERSISTENCE - Stays with a set course, stick-to-it-iveness (S)	25	35 ✓	45	55	65	75
AGGRESSIVENESS - Drive toward goals (using acceptable means) (F:M) 1				✓		
SOCIAL RESPONSIBILITY - Sees obligation to society, family, self (FC:M) 1					✓	
COOPERATION - Good team worker; good relations with others (CF:FC) 4					✓	
TACT - Controls impulses and biases; social self-control (FM::FC:M) 5	25	35	45	55 ✓	65	75
CONFIDENCE - Good inner morale; self-assured; feels worthy (FM:M) 6				✓		
CONSISTENCY - Is predictable; stable in behavior patterns (F::S:Fch) 7			✓			
ANXIETY - Apprehensive, uneasy, feels insecure (Fch)			✓			
MOODINESS - Tends to have sharp fluctuations in mood (FM:F-::F:M) 8			✓			
ACTIVITY POTENTIAL - Controls, Directs Emotional Energy (M)	25	35	45	55 ✓	65	75
IMPULSIVENESS - Acts on impulse rather than plan; spur-of-moment (F-:F) 9			✓			
FLEXIBILITY - Adaptability; adjusts readily to new situations (M::FC:CF) 10				✓		
CONFORMITY - Acceptance of moral and social rules (O:P) 11				✓		

Responsiveness

SEES THINGS LIKE MOST OTHERS DO (P)	25	35	45	55 ✓	65	75
SEES THINGS DIFFERENTLY THAN MOST OTHERS (O)		✓				

Interests

RANGE - Range of Interests is broad if score is higher (H:P::A) 3	25	35	45 ✓	55	65	75
HUMAN - Higher scores denote interest in human elements, factors (H)			✓

ANALYSIS OF TESTS AND INVENTORIES (Continued)

His mechanical comprehension test was average in comparison to men in general and below average in comparison to executives but within their range.

He was quite accurate on the clerical test for checking numbers and performed average or better in comparison to executives and with extreme accuracy. Possibly due to fatigue, his score dropped off on the second half of the test where he was checking the names.

Personality:

On this measurement he showed scores within the range of our executive research group but tending to be slightly more emotional and less self-sufficient as well as less aggressive in face-to-face situations than most executives. He was much more sociable or desirous of social contact than most executives and the total personality pattern describes the type of person who is liked by most subordinates and colleagues but who may limit his effectiveness somewhat by his liking for people and his desire to have them like him.

Adjustment Under Stress:

Lyle Fulton showed excellent adjustment under stress and it could be said that the configuration of his scores should be disregarded because all of them are within such close range.

SORT Profile:

On this test, the Structured Objective Rorschach Test, Fulton showed good mental functioning and no factors which limit his mental performance in a crisis. He tends to be more of a practical than a theoretical thinker and to have an "open mind".

Interests:

Fulton has an excellent pattern of Interests showing four strongly significant Interests in the main Interest areas, the highest for Production Management where he exceeds 54% of men successful in Production, Supervision and Works Management. Second, he has a significant interest in Management Detail and a significant interest in Top Administrative work. He also shows a significant interest in Sales which assures appreciation by him of the problems of the Sales organization. It is interesting to note that he has a significant interest for work with his hands exceeding 50% of men successful in the manual crafts.

Associated
Personnel
Technicians

AMHERST 2-8439

ANALYSIS OF TESTS AND INVENTORIES (Continued)

His General Level of Interests (See "Occupational Level of Interests") was slightly below average in comparison to men in general and just beyond the range of our top management sample (although not beyond the range of men working at the third echelon of management). This score, while not detracting from the specific motivation shown by his other interest scores, tends to indicate that his over-all, non-specific motivation and drive is not as great as his specific drive for Production work.

SYNTHESIS

Summarizing Fulton's scores and interpreting them in the light of his background we find that he is a person above average in mental capacity when not required to work against time and that he has some limitations in vocabulary when compared to executives.

He shows a friendly and sensitive personality with a strong tendency to seek advice before taking action. His personality may be described as the type of supervisor who tends to let things go in the supervisory situation until drastic action is required, rather than pointing out each mistake or error to a subordinate at each time that it happens.

He is a very well adjusted person and shows a good pattern of mental functioning with no severe limitations.

His Interests are good and he shows four significant Interests touching all the major areas of supervisory functioning. However, he has some limitations in his general over-all drive.

Associated Personnel Technicians
118 SOUTH MAIN
WICHITA, KANSAS
AMHERST 2-8439

SUGGESTIONS AND RECOMMENDATIONS FOR LYLE K. FULTON

1. The scores on both the speed and the no-time-limit tests suggest that Lyle Fulton's personality trait of seeking advice and counsel before taking action is very desirable. He will find that others can help him in handling problems of a high order of difficulty and that his work will be made easier by following the advice and counsel of others. As a matter of fact, he probably has already developed a policy along these lines.

2. When a person has a limited vocabulary he should set about to improve his knowledge of words by (1) Making a good dictionary his constant companion while reading, looking up each word that he could not use in a sentence of his own; (2) Working cross-word puzzles or playing "Scrabble", again using a dictionary; (3) Going to the library to find back copies of the Reader's Digest (with its monthly feature "It Pays To Increase Your Word Power). However, in doing this, he should not accept the definitions in the magazine, but should look up the words he misses, always using them in a sentence three times before dropping the word as a project.

3. Lyle Fulton would profit from getting a high school text book on physics to get a better grasp of the basic principles and laws lying behind the mechanical processes. Also, he might find it profitable to view the television show "College of the Air" which appears on NBC Stations at 6:00 a.m. through the winter months.

4. Lyle Fulton will find it desirable to study the techniques of dealing with people as shown in the book "Psychology In Living" by Dr. Wendell White (MacMillan). The techniques shown there both for advancing ideas and for over-coming objections or wrong ideas will help to give him more strength and staying power in face-to-face situations.

   In addition to this, Fulton should remember one does not live the life of a leader during the hours that he is on duty and then allow others to "run" his life in the period outside working hours. Fulton is the kind of "nice guy" who tends to let other people have their way regardless of his feelings on the point. This tends to undermine his strength of personality for the time that he needs it most --- during working hours.

   He should keep in mind the fact that good supervision involves the correction of each and every mistake by a subordinate promptly and without allowing time to intervene. The good supervisor is the one whose subordinates feel the constant pressure of his supervisory force even when he is not within sight or earshot.

SUGGESTIONS AND RECOMMENDATIONS (Continued)

5. To step up his general or non-specific motivation and drive, Fulton needs to set specific goals for himself and answer the questions:

   a. Where do I want to be in ten years?
   b. Where will I have to be in five years to attain that goal?
   c. What are the successive one year steps that will be required to reach the five year goal?

Family Group Sheet

Husband:	**Lyle Kenney Fulton**

Notes

Lyle was 21 years when he married 1st wife, Ruby Louise Turner.
He was 52 when he married 2nd wife, Mary Margaret "Mickey" Murray Hines.
The day Lyle and Ruby joined the church, Jack Kenney was baptized-Easter Sunday, 1 April 1934.
Metal casting foundry work for the Acme Foundry in Blackwell, Oklahoma. Worked for the same company for 50+ years. His hobbies were carving, woodworking, gardening, and family.

INFORMATION: This was written in 1984 while Lyle was living with Jack & Barbara. Lyle is an avid bowler achieving a perfect game during practice games before a league series. He is an excellent self-taught woodcarver, carving man gifts for his family. He also enjoys a good game of billiard pool. He has remained very active in his retirement and does not show his numerical age.

Obituary- appeared in the Blackwell Journal Tribune, Tuesday, February 28, 1995.
LYLE K. FULTON
Lye Kenney Fulton of Blackwell died in the Baptist Medical Center in Oklahoma City on Friday, February 24, 1995. He was 85. His funeral will be Wednesday, March 1, at 2 p.m. in the Presbyterian Church in Blackwell with Rev. Geoffrey Pfaff officiating. Burial will follow in the Blackwell IOOF Cemetery under the direction of Roberts Funeral Home. Casket bearers will be Fred Williamson, Jim Kincheloe, Max Kincheloe, Les Cartwright, Bob Miller and Jack Bell. Honorary bearers will be Bill Brewer, Dale Shaw, Pete Anderson, Glendon Berry and Lee Elam.
Mr. Fulton was born July 9m 1909, in Marissa, Illinois, to Howard Gordon and Margaret Josephine (Kenney) Fulton. He moved with his parents to the Aurora, Nebraska area, where he grew up and attended local schools. He helped on the farm with his parents until 1927 when he moved to Blackwell to work for the Hazel-Atlas Glass Plant. In 1928, he began working for the Acme Foundry in the core room, later becoming foundry superintendent. He and Ruby Louise Turner were married on October 25, 1930 in Blackwell. They settled here. She preceded him in death. He later married Mary E. Hines on August 24, 1961. They settled in Blackwell. Mr. Fulton retired from the foundry in 1979, following 50 years of employment. He was a member of the American Foundry Society. He was also a member of the Presbyterian Church and the Blackwell Bowling Association.
Surviving are his wife, Mary E. Fulton, of the home; two dauthers, Deanna Sue Patterson of Oklahoma City, and Judith Hall of Moore; three sons, Jack Fulton of Bartlesville, Murray Hines of Fort Worth, Texas, and Patrick Hines of Roswell, Georgia; one brother, Eugene Fulton of Pomona, California; eight grandchildren and five great-grandchildren. He was preceded in death by one son, Edy Mac Fulton; one brother, Harold Fulton and two sisters, Lucille Linn and Ruth Lauderdale Looney.
The casket will be open at the funeral home until 11:30 a.m. on Wednesday and at the church from 1 p.m. to 2 p.m. It will then be closed.
Memorial contributions may be made in Mr. Fulton's name to the Oklahoma Medical Research Foundation--Heart Fund. The funeral home will act as custodian of the fund.

Wife:	**Ruby Louise Turner**

Notes

Obituary
RITES WEDNESDAY FOR MRS. FULTON
Mrs. Lyle K. (Ruby Louise) Fulton, 48, died at her home, 921 North A, at 3:45 p.m. Monday, following an extended illness. Funeral services wil be held Wednesday at 2:30 p.m. in Roberts and Sonc chapel with Rev. George Hinshaw of the First Presbyterian Church officiating. Mrs. Fulton was a lifelong resident of Blackwell. She was born here July 24, 1912. She was a member of the Presbyterian Church. Survisors are her husband; a daughter, Mrs. Max L. Barnes; a son, Jack Fulton, Bartlesville; three grandchildren, her mother, Mrs. Mary Ann Turner, Blackwell; and two sisters, Mrs. R.D. Goodno, Oklahoma City, and Mrs. Joe Goble, Blackwell. Burial will be in the IOOF Cemetery. Pallbearers will be L.O. Miller, Henry Buskuhl, Lawrence Law, Roger Goff, Dick Batten and Jim Dacus.

Child:	**Jack Kenney Fulton**

Notes

Child:	**Edy Mac Fulton**

Notes

Otituary
EDY MAC FULTON
Funeral services for Edy Mac Fulton, 3-month-old son of Mr. and Mrs. Lyle K. Fulton, 437 East Oklahoma, who died at the Riverside Clinic Hospital at 5:50 p.m. Monday, will be held at the Presbyterian Church at 10 a.m. Wednesday. Burial will be in the IOOF Cemetery, under the direction of Fyffe's Chapel. Edy Mac had been ill since Thursday. He was born May 25. Surviving are his parents, and one brother, Jack.

Child:	**Deanna Sue "De" Fulton**

Notes

FLOWERS THIS MORNING are in memory of Mrs. Lyle K. Fulton by Mr. Fulton, Deanna and Jack.

USHERS AND HOSTESSES SCHEDULED TO SERVE THIS MORNING are Moss Offield, Jon Kotchavar, Guy Markland, Tom Horsburgh, Mrs. Moss Offield and Mrs. Art Fey.

* * * *

PRAYER GROUP will meet Wednesday at 9:30 A.M. with Mrs. Ed Bagby.

* * * *

HAVE FUN WITH YOUR FAMILY !! Plan to come to the CHURCH FAMILY PICNIC sponsored by the Women's Fellowship.
TIME - 6:00 P.M.
DATE - Wednesday, July 26th
PLACE - Southwest Blvd. Park (one block northwest of High School)
WHAT'S THE DEAL? - Bring picnic type covered dishes and your own table service. Drinks furnished by the Women's Fellowship.
COME - RENEW the Fellowship experiences of the congregation at this enjoyable Mid-Summer's Night party.

* * * *

OUTLINE of TODAY'S SERMON

TEXT - 121st Psalm

Introduction - There are four pictures of the nature of God revealed in this Psalm

1. The God of the Unchanging Hills
   (verse 1"I will lift up mine eyes unto the hills")
2. The God of the Sleepless Watch
   (verse 3 "....he who keeps you will not slumber or sleep")
3. The God of the Friendly Shade
   (verse 5 "The Lord is your shade....")
4. The God of Our Everyday Life
   (verse 8 "The Lord will keep your going out and your coming in from this time forth and forever more.")

* * * *

THE SACRAMENT OF INFANT BAPTISM will be offered next Sunday, July 30th. Parents are asked to make arrangements with the pastor for the baptism of their children if this ceremony has not been given.

* * * *

THE HINSHAWS will leave for vacation and Summer School in Indiana next Sunday. Gordon Edwards, of Ponca City, will be filling the pulpit during the month of August.

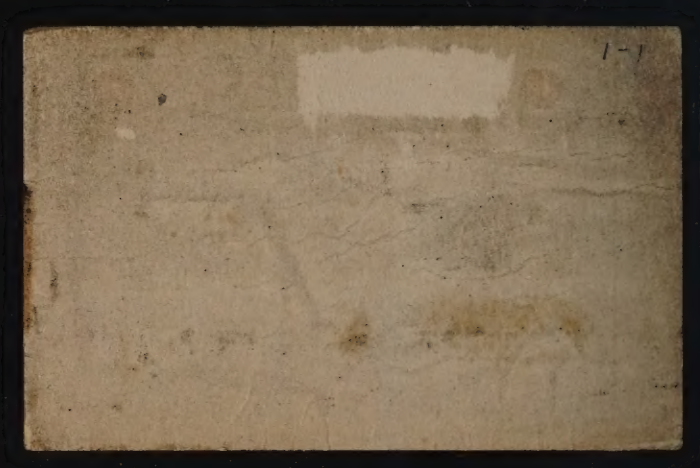
Dated at Blackwell, Oklahoma, this 28 day of March, 1942.

Signature of Warden Lyle K. Fulton

Chief Warden

Chief of Civilian Protection



BULLETIN OF INFORMATION FOR PERSONS REGISTERED

You have registered for selective service and training in the interests of national defense. Under the law it is now your duty to keep yourself informed as to any action concerning you which your local board may take. This booklet is given you to help you in obtaining this information and in observing the law. *Keep this booklet—Read it carefully.*

REGISTRATION CERTIFICATES

When you registered you were given a small card called a registration certificate. This certificate shows that you did register. *It is important that you keep your registration certificate with you at all times.* Do not lose it. But if it is lost or stolen go at once to your local board, and they will give you another certificate.

LOCAL BOARD

Your local board is set up to select the men in your community who are to be trained for national defense. The members of your board are civilians, citizens of the United States, and live in your county. Your local board must decide which men go for training. Rules and regulations have been made to be followed by your local board. These rules and regulations are written to make sure that you and every other registrant will get fair treatment.

If you do not know where to find your local board office, then ask your postmaster, your bank, or your newspaper. In large cities there will be more than one local board. Find out which local board has your card and where its office is. Someone at the post office, the city clerk's office, or any bank, or newspaper office can tell you where to find your local board.

You are responsible for keeping in touch with your local board. Watch for notices at your local board office. Tell your local board any time you change your address. Tell your local board before you leave your county for an extended absence.

VOLUNTEERING

You may enlist through the regular recruiting stations in the Army, Navy, or Marine Corps in the same way that you could before you registered. If you do enlist, you must notify your local board at once.

Or you may go to your local board and volunteer for military training and service. You may wish to do this so that you may finish your training as soon as possible. If you want to do this, go to your local board and tell them you want to volunteer for training now. If you volunteer and are accepted you will get the same training that you would if you had waited to be selected by the local board.

SERIAL NUMBERS

Shortly after registration your registration card will be given a serial number by your local board. You can find out what your serial number is by looking at the list which will be posted at the offices of your local board. Read the next paragraph about your serial number in the national lottery.

260674°—40

ORDER NUMBERS

After your card has received its serial number, numbers will be drawn by chance in a national lottery in Washington, D. C. The order in which these serial numbers are drawn will determine your order number. Your order number will determine the order in which, in your local board area, you may be called for training and service unless you are deferred.

QUESTIONNAIRES

After the order numbers have been assigned, your local board will mail you a questionnaire when your turn comes. The questionnaire is a printed list of questions which you must answer. Your answers will be used by your local board in deciding whether you are to be called for military training and service. Your questionnaire must be returned to your local board within 5 days from the day of mailing by the local board.

There is one way you can be sure about the time your questionnaire is due. Your local board will post outside its office a notice of the order numbers of the men to whom questionnaires have been mailed. Watch for this notice. If your order number is on this notice and you do not receive your questionnaire in the mail at once, go to your local board, get another questionnaire, answer the questions, and return it at once.

ADVISORY BOARDS FOR REGISTRANTS

Somewhere near you there is at least one Advisory Board for Registrants. This board is made up of persons who are willing and glad to help you fill out your questionnaire, without charge. Ask your local board where you can find the nearest Advisory Board for Registrants. Go to this Advisory Board and get its help. Do not pay any money to anyone for helping you to fill out your questionnaire. This questionnaire is the most important information which your local board needs to decide whether or not you are to be called for training and service. Your answers to the questionnaire must be correct and must be in proper form. The Advisory Board will help you to do this the right way. If you wish to make out your questionnaire without help, then read carefully all of the instructions.

GOVERNMENT APPEAL AGENTS

In order to protect your interest as well as the interest of the Government, there is a Government appeal agent for your local board.

OATHS

The law requires you to swear (or affirm) to the truth of your answers. Do not pay any money to anyone for taking your oath or affirmation. Any one of the following persons can take your oath; find one who will do it free of charge:

Any member of your local board.
The chief clerk of your local board.
Any member of the Advisory Board for Registrants.
Any postmaster.
Any Federal, State, or municipal officer authorized to administer oaths.
A notary public.

CLASSIFICATION AND SELECTION

The law and the rules of the Selective Service System provide for deferment of your training and service as long as this deferment serves the Nation's best

interest. Your questionnaire has questions and space for the information needed by your local board. You should attach to your questionnaire any papers necessary to prove the truth of your answers. Any written statements you may submit must be in the form of sworn affidavits. You may answer all questions freely because your answers as to your dependents, your income, and your physical condition are strictly confidential. Give your local board full and complete information in answering your questionnaire. Your local board will study your questionnaire and will get from you or others any additional information it needs about you. When it has this information you will be placed in one of four general classes:

Class I—Those persons available for training and service in the land or naval forces.

Class II—Those persons deferred because the public interest is best served by their staying at their usual work.

Class III—Those persons deferred because others are dependent upon them for support.

Class IV—Those persons deferred from service either by the law itself, or for physical disability, or other reasons.

Your local board will mail you a notice of your preliminary classification. It will also keep in its office a record of the classification given you.

Watch for your classification at the office of your local board.

CLASS II DEFERMENTS

You will be put in Class II if your employment in industry, agriculture, or other occupations or employment, or your activity in other endeavors, is found by the local board to be necessary to the maintenance of the National health, safety, or interest. No such deferment will be made except on the basis of the status of the individual himself, and no such deferment will be made of individuals by occupational groups or of groups of individuals in any plant or institution.

CLASS III DEFERMENTS

You will be put in Class III if your local board decides that your status with respect to persons dependent on you for support renders your deferment advisable. Dependents are defined in the law to include only those who are in fact dependent for support in a reasonable manner on income earned by you from your business, occupation, or employment.

CLASS IV DEFERMENTS

Class IV will contain men whose deferment is prescribed by law or who for other reasons are not considered available for selection.

DEFERMENTS ARE TEMPORARY

All classifications can be changed by your local board. Whenever your grounds for deferment change, you must tell your local board. For instance, if a person dependent upon you for support should die, marry, or become self-supporting, tell your local board. If you lose your job or change your work, tell your local board. Your local board will mail you notice of any change of your classification, but you must keep yourself informed about your classification. Keep in touch with your local board office and learn from your local board any changes in your classification.

CONSCIENTIOUS OBJECTORS

The law relieves any person of combatant training and service who, by reason of religious training and belief, is in good faith conscientiously opposed to participation in war in any form. However, the law does not relieve the conscientious objector from service, which will be either noncombatant service or else work of national importance under civilian direction. Your local board can give you full information on this question.

PHYSICAL EXAMINATIONS

Only persons put in Class I will be given physical examinations. Your local board will mail you a notice to report for physical examination. After your physical examination your local board will decide if you are physically fit for military training and service. If you are physically fit, you will remain in Class I; if you are not physically fit, you will be put in Class IV and will be deferred until further notice.

APPEALS

If you are not satisfied with your preliminary classification one or more members of your local board will be available to discuss the matter with you. If you then desire to appeal from your classification, your appeal must be filed within five days from the date your local board writes in its Classification Records the class in which you are placed. You do not need to hire any person to appear for you. To make an appeal, go to your local board, tell it you wish to appeal, and sign your name on the space printed on the questionnaire. When you do this, your local board will send to the board of appeal all papers and evidence needed for the appeal.

You cannot go in person to the board of appeal, nor can you have any person appear there for you. You cannot send any new papers or evidence to the board of appeal. You must give your local board all papers and evidence about yourself. Do not pay any money or any fee to anyone for your appeal. When a decision has been made by the board of appeal, you will be notified by your local board.

CALLS FOR TRAINING AND SERVICE

From time to time your local board will get a call for a certain number of men from your county, and those in Class I will enter upon training and service according to their order numbers. If you are called for training and service, your local board will mail you a notice of the time and place you are to report for duty. Failure to observe this notice would subject you to the penalties provided by law.

If you are in Class I, keep closely in touch with your local board to learn when you are to be called. Your local board will tell you what clothing to bring and furnish transportation and meals while you are traveling. Your local board will take care of everything necessary to get you to the induction station.

NOTICES

Your local board will post outside its office, notices which affect you. The following lists will be outside the local board offices:

(1) List of serial numbers given to registrants.
(2) List of order numbers given to registrants.
(3) Notice of mailing questionnaires to registrants.

Keep yourself informed by looking for these notices at your local board office.

Your local board will keep in its office a classification record showing the date any other notices were mailed to you. These dates are important. Learn them from your local board by calling at its office for information. The notices which will be mailed to you are these:

(1) Notice of classification.
(2) Notice to appear for physical examination.
(3) Notice of local board's decision as to physical qualifications.
(4) Order to report for induction.

A record will be kept in the local board office of the date each of these notices was mailed to you.

As a part of your duty to defend the Nation, it is your duty to keep yourself in touch with your local board and to know what the local board has done about you. The classification record at the local board office is always open for your inspection. Therefore, failure to receive notices and orders mailed to you by your local board will not excuse you for failure to comply with them.

SUMMARY OF IMPORTANT INSTRUCTIONS

Report to your local board any change of address. Report to your local board before leaving your county on an extended trip. You must obtain permission from the local board before leaving the United States. If you are away from home, your local board might take some action affecting you, and you would not know of this action unless your local board has your address at all times.

You must report to your local board any change in your condition which might affect your classification. This means that any change in your dependents, your occupation, your citizenship, or a substantial change in your physical condition must be reported to your local board.

For information, write only to your local board, your advisory board for registrants, and the government appeal agent assigned to your local board. If you have questions to ask, one of these boards or the agent can answer them. Sending a letter to your State capitol or to Washington will only delay the answer because no one has authority to interfere with your local board in passing upon your availability for service.

Keep this booklet with you. Read it. Follow the instructions given in this booklet. If you do this, you should have no trouble in doing your duty under the Selective Service Law and the President's regulations. Remember it is your duty to learn what your local board is doing about you.

This bulletin is only a summary of information and does not have the force and effect of rules and regulations, which govern the operation of the Selective Service Law and are on file in each local board office.

○

A MESSAGE TO REGISTRANTS FROM THE PRESIDENT OF THE UNITED STATES

I wish I could personally talk to each one of you about our country's pressing need for a stronger defense, and its vital meaning to you, your family, and the whole Nation. I would tell you that the task before us today is as compelling as any that ever confronted our people, and I would add that each of us must willingly do his bit if we are to hold fast our heritage of freedom and our American way of life—our national existence itself.

And whether or not you are to be among those selected, I welcome you as one whose name has been inscribed on the roll of honor of those Americans ready, if need be, to join in the common defense of all.

Franklin D. Roosevelt

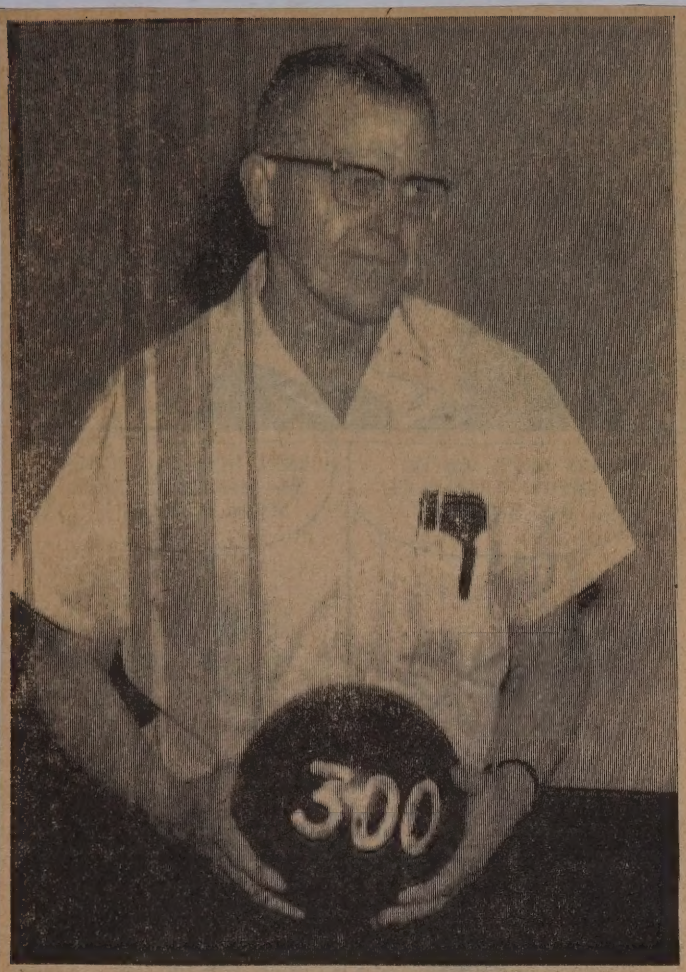
OKAY, I GIVE UP-- WHERE ARE THEY?

Pictured here:
Back Row, Lyle Fulton, Ray Shriner, F.L. Vogler and Glenn North
Front row: Bill Turvey, Walt Geiger and Harvey Tucker



LYLE FULTON has to his credit something that every bowler dreams of and only few Blackwell bowlers can claim, that being a 300 game. Lyle rolled the perfect game last weekend during a practice session. He rolls in Early League bowling for Bill Massey Insurance and Wednesday night for Al's TV. According to Charles Williamson, manager of Bowlarena, this is the first perfect game rolled in the building and the first in about 25 years for Blackwell. (J-T Photo)

A BOWLER'S PRAYER

Deliver me from low score games,
7-10 splits and open frames,
Guide my ball into that pocket
And drop that pin
if I just rock it,
And let me make
my claim to fame
And bowl just
Another ONE 300 GAME!

And he did!
Lyle had two
perfect games
in his Lifetime!

RESIDENT AGENT

ALBERT S. TEED
WOLCOTT BUILDING
HUTCHINSON, KANSAS

March 25, 1964.

Mr. Marvin Billington, Captain
Bowlareno Lanes Team,
Box #665,
Blackwell, Oklahoma.

Dear Mr. Billington:

We are happy to advise that your Mr. Lyle Fulton won our 1964 Class B All-Events, and to congratulate him on his fine 1838 score.

His trophy will be ready for shipment on Monday, March 30th, and we ask that you advise to whom it shall be sent and to what address.

Prize checks are now being written, and I am hoping that I can have all 1382 of them signed and ready for mailing on the same date.

It was fine to have had you fellows with us this year, and hope that you will again join us next year at Hutchinson, Kansas.

Sincerely,

Lester C. Baston

Lester C. Baston,
Secretary-Treasurer

Hines - Fulton vows announced

Mr. and Mrs. J. C. Murray of 713 East Ninth street, announce the marriage of their daughter, Mary E. Hines of Carter Nine, to Lyle K. Fulton of Blackwell.

The wedding was an event of Thursday, August 24, at 10 a.m. in the Immaculate Conception Church with Father John Murray officiating.

The bride was attended by Mrs. Deanna Barnes of Jacksonville, Fla., the groom's daughter, as the matron of honor; and Miss Judy Hines of Tulsa, as the bridesmaid. Patrick Hines served as the best man.

A reception followed in the home of the bride's parents.

After a short wedding trip, the couple will be at home in Blackwell.

Fulton-Hines Wedding Revealed

At a wedding ceremony solemnized Thursday, Aug. 24, 1961, in the Immaculate Conception Church of Pawhuska, Mrs. Mickey Hines formerly of Carter Nine, and Lyle K. Fulton of Blackwell, were united in marriage with the Rev. John T. Murray officiating.

The bride was attended by her daughter Miss Judy Hines, as maid of honor, and Mrs. Deanna Barnes, daughter of the bride-groom, as bridesmaid.

Pat Hines, son of the bride, acted as the best man for the bridegroom.

Following the ceremony, a reception was held in the home of the bride's parents in Pawhuksa.

Immediately following the reception, the couple left for a short trip touring the Ozarks.

Mr. Fulton is Superintendent at the Acme Foundry in Blackwell, Okla., where the couple will establish residence at 921 N. A. St.

THURSDAY, SEPTEMBER 14, 1961

SHIDLER — Mrs. Mickey Hines, formerly of Carter Nine, and Lyle K. Fulton of Blackwell were united in marriage August 24 in the Immaculate Conception Church in Pawhuska. Rev. John T. Murray officiated. The bride was attended by her daughter, Miss Judy Hines, as maid of honor, and Mrs. Deanna Barnes, daughter of the bridegroom, was bridesmaid. Pat Hines, son of the bride was best man.

A reception was held in the home of the bride's parents in Pawhuska following the ceremony after which the couple left for a short trip touring the Ozarks. Fulton is superintendent at the Acme Foundry in Blackwell, where the couple will reside at 921 N. A. Street.

DELBERT GOGGINS BILL WINTER=

THE COMPANY WILL APPRECIATE SUGGESTIONS FROM ITS PATRONS CONCERNING ITS SERVICE

MOST RECENT GRADUATES OF Blackwell's school of practical nursing are pictured here along with dignitaries present for their graduation ceremony.

11 Are Graduated By BGHs Nursing School

Bishop Victor J. Reed conferred diplomas on 11 graduates of Blackwell General hospital school of practical nursing at a pontifical mass in St. Joseph's Catholic church.

Graduates include Angelina Antu, Oktaha; Sue Gassert and Viola Perdum, Ponca City; Mary Hiens, Carter Nine; Mary E. Ketrick and Sheila Ketrick, Tulsa; Olive Noblett and Peggy Parsons, Blackwell; Mary Ann O'Connor, Shawnee; Adalea Stowers, Cushing; and Jean Turner, Enid.

Bishop Reed, who addressed the graduates, was escorted to the church by Knights of Columbus of the Ponca City district.

Judy Hiens, daughter of Mary Kiens and a graduate of St. John's school of nursing, sang "Ave Maria."

Felician Sisters from Blackwell General hospital sang in the choir with Sister Mary Firmima as organ accompanist.

Blackwell General's school of practical nursing has graduated 25 classes since its opening in 1948.

Two classes are admitted annually, one in September and another in March.

A new class of 18 students will begin training on Sept. 4.

Commencement exercises for graduates of Blackwell General hospital's school of practical nursing will be held a 9 a. m. Sunday, Aug. 20, at a pontifical mass celebrated by Most Rev. Victor J. Reed, bishop of Oklahoma City-Tulsa, in St. Joseph's church.

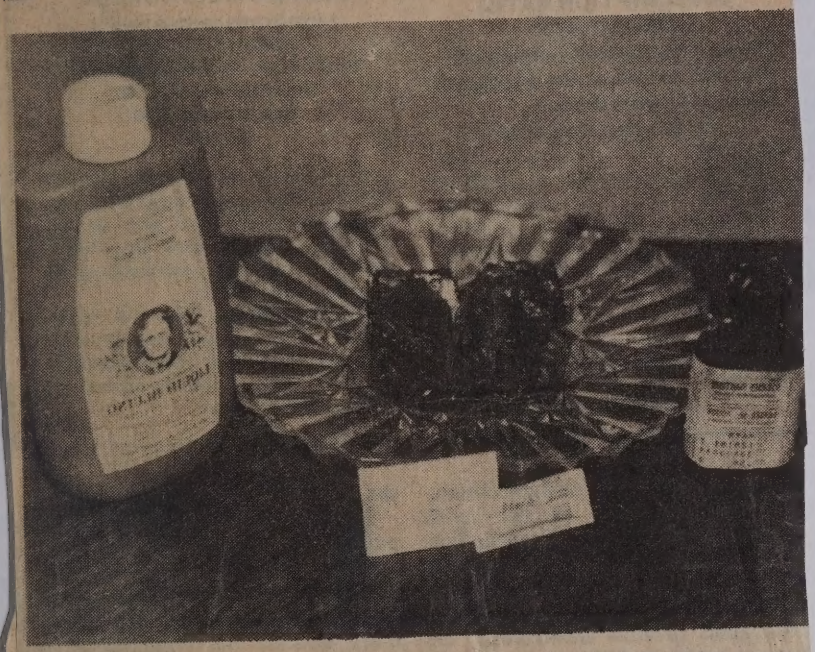
Doodles by LOIS

By LOIS FESSENDEN



There has been such an interest in the making of Coal Flowers, crystal gardens, or crystal castles, that we decided to have a show and contest.

MARY FULTON

On July 19, Mary Fulton shared news that a small chunk of broken brick could be used in place of coal. Can understand the need for iodine or mercurochrome in this, as those have a coal tar base.

Mary said, "Use a shallow transparent dish. Put the piece of broken brick or chunk of coal in the dish. Cover with a layer of table salt. Mix together three tablespoons liquid bluing, or ink, three drops of iodine or mercurochrome, one teaspoon ammonia, and pour over the lump of coal or brick. Add a bit of water daily, being very careful not to pour the water on top of the flower. It starts to grow immediately."

SHIRLEY ARNOLD

On Aug. 2, we told directions for a Carey Castle from Shirley Arnold in Braman. "One and one-fourth tablespoons table salt, four pieces of two-inch coal. Pour laundry bluing over coal in a saucer until it reaches halfway mark on side of coal. Pour salt over coal and bluing. In a few days crystal flowers will begin to form. For color variety, add food coloring.

Doodles by LOIS

By LOIS FESSENDEN

The Grape Dumplings

A call from Mrs. Harold Patton brings the first recipe for Grape Dumplings that we had asked in last week's Doodle.

Mrs. Patton's father had a sister named Waltena. Waltena married Raymond Red Corn of Pawhuska. This is the lady who refined and developed the mixture sold in stores and at the Red Corn Restaurant in Pawhuska called Ha-Pah-Shu-Tse. (Red Corn)

Mrs. Patton told me that Wal-Mart recently featured a big display of this fry bread mix and on the newer packaging (which I haven't seen yet) is found the wanted recipe.

Then the mail brings more news. Mrs. Lyle (Mary E) Fulton shares some of the Indian lore and recipes from a book she owns which was published by Juman in Pawnee, Oklahoma.

According to the author of the book of Indian recipes, the grape dumplings were billed as "The best known Indian dessert."

Mary said, "I imagine the different tribes had their own version of this and other dishes. The first recipe appears to be the same used in Red Corn's in Pawhuska, but I learned to make grape dumplings from an Osage aunt some years ago. We made a light dumpling mixture and dropped by teaspoons in the boiling juice."

Mrs. Fulton continues, "While thumbing through the booklet, I found this recipe which is exactly the one you have in mind. It is called "Walakshih." It is made with cornmeal."

Bless her heart, she copied it and the other one and sent them to me.

One item she shared came as a surprise. Didn't know the wild opossum grapes could be dried on the stems for later use.

The author of the book admitted that the housewife who didn't have a supply of opossum grapes could use the store bought juice. (Sweeten with sugar or honey)

Thanks to both of you dear ladies for responding to our plea.

Bless the Children

A grandfather teasing the little one snuggled close to the grandma, said, "You are giving grandma all of your love."

Looking incredulous, the tiny one replied, "But, grandpa, I've got lots of loves."

Smile

The lady said, after being informed by her husband the car battery was dead, "I hope it didn't suffer."

Time Changes

Couldn't find the note we scribbled about the 1914 auto once owned by Oral DeCamp. Do remember he said with the side seatrs in the touring car, he could take all of the basketball team to the neighboring towns for the games. If I'm not mistaken, this was a girls basketball team.

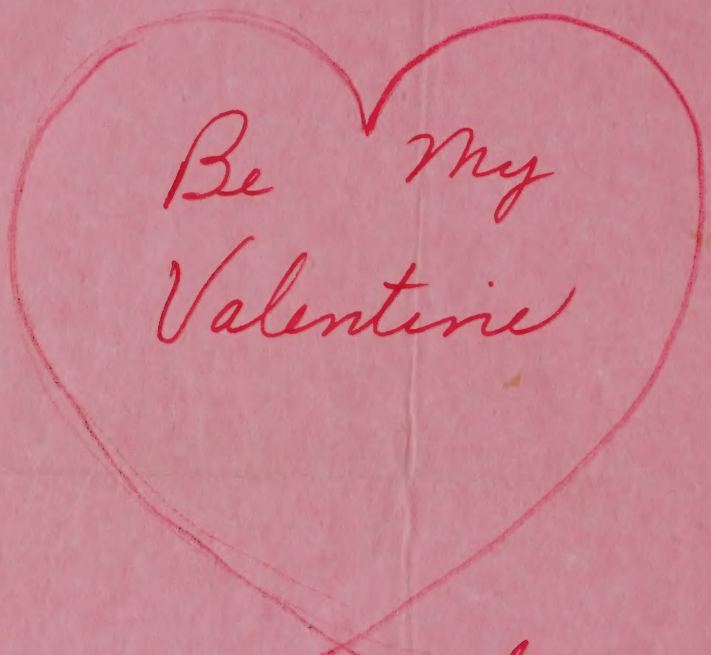
Anyhow, to show how times have really changed, he told of going in to a restaurant after a game to have something to eat. He paid the entire bill for all with five dollars and was given some change.

Oral said the DeCamp family came to Blackwell on a stage coach. Hope he has written some of his memories down for his family and will share some with all of us.

Someone loves you more each day,
Loves you more than words can say,
Always loves to be with you
And wants to share in all you do,
Thinks you're dear as dear can be--
Someone loves you, Sweetheart--ME!

Yours Bowling Pal

Roses are red, violets are
blue, sugar is sweet and
you're My Sweet Daddy



Love you little, love you BIG
Love you like a little Oink Oink.
You didn't know I was a pack.
You also my old Money Bags.
Let up at the game table.

Much Love

Reception planned for Lyle Fultons

Mary E. and Lyle K. Fulton, 939 North Seventh, in Blackwell are being honored at a reception on the occasion of their silver wedding anniversary on Sunday, Aug. 23, in the Red Cross building, 1313 West Ferguson.

Friends, neighbors and relatives are invited to attend between 1 and 4 p.m. and share the happy time with them.

The family requests there be no gifts. However, guests are encouraged to bring anecdotal notes, photographs and other memorabilia to be placed in a memory album.

Hosts for the event will be the couple's children, Deanna Patterson of Moore, Judith and Irwin Hall of Woodward, Jack and Barbara Fulton of Bartlesville, Murray and Linda Hines of Fort Worth and Pat and Teri Hines of Houston.

Mary Hines and Lyle Fulton were married Aug. 24, 1961, in the Catholic church in Pawhuska.

Mary came to Blackewell in 1960 to attend Blackwell General Hospital's nursing school. Lyle was employed by Acme Foundry for 53 years.

ILIAE VSTAE TAE DIS

Be it known that Lyle K. Fulton *is hereby awarded the title of*

DAD of the YEAR

For: Staunchly serving in such varied capacities as chauffeur, gardener, plumber, fix-it man, barbecuer, family treasurer, financial advisor, and referee.

For: Maintaining an even temper and a level head while withstanding the rigors of child-rearing and the hazards of fatherhood.

For: Calmly handling the problems of dwindling allowances, exhausted charge accounts, impossible homework, and general transportation.

For: Being always prepared to fix leaky faucets, raise sagging spirits, give a pat on the back (or lower if needed), lend a helping hand or a buck, offer good advice and give unselfishly of his time and affection.

In view of the above, the bearer of this certificate is hereby entitled to one whole day of Uninterrupted Peace And Quiet

Signed Mary Dennis *this* 15th *day of* June *Nineteen Hundred and* 69

There is worse things than being alone

A Prayer for a Married Couple

O GOD, our Heavenly Father, protect and bless us. Deepen and strengthen our love for each other day by day. Grant that by Thy mercy neither of us ever say one unkind word to the other. Forgive and correct our faults, and make us instantly to forgive one another should one of us unconsciously hurt the other. Make us and keep us sound and well in body, alert in mind, tender in heart, devout in spirit. O Lord, grant us each *to rise to the other's best*. Then we pray Thee add to our common life such virtues as only Thou canst give. And so, O Father, consecrate our life and our love completely *to Thy worship*, and to the service of all about us, especially those whom Thou hast appointed us to serve, that we may always stand before Thee in happiness and peace; through Jesus Christ our Lord. AMEN.

This beautiful Prayer was written by Bishop Slattery, soon after his marriage, to be used each day in their family devotions at home in Boston, Massachusetts.

Lord thank you for the food before us Friends beside us and love between us Amen

LYLE K. FULTON

LYLE K. FULTON

Lyle Kenney Fulton of Blackwell died in the Baptist Medical Center in Oklahoma City on Friday, Feb. 24, 1995. He was 85.

His funeral will be Wednesday, March 1, at 2 p.m. in the Presbyterian Church in Blackwell with Rev. Geoffrey Pfaff officiating. Burial will follow in the Blackwell IOOF Cemetery under the direction of Roberts Funeral Home.

Casketbearers will be Fred Williamson, Jim Kincheloe, Max Kincheloe, Les Cartwright, Bob Miller and Jack Bell.

Honorary bearers will be Bill Brewer, Dale Shaw, Pete Anderson, Glendon Berry and Lee Elam.

Mr. Fulton was born July 9, 1909, in Marissa, Ill., to Howard Gordon and Margaret Josaphine (Kenney) Fulton. He moved with his parents to the Aurora, Neb., area, where he grew up and attended local schools.

He helped on the farm with his parents until 1927 when he moved to Blackwell to work for the Hazel-Atlas Glass Plant.

In 1928, he began working for the Acme Foundry in the core room, later becoming foundry superintendent.

He and Ruby Louise Turner were married on Oct. 25, 1930, in Blackwell. They settled here.

She preceded him in death.

He later married Mary E. Hines on Aug. 24, 1961. They settled in Blackwell.

Mr. Fulton retired from the foundry in 1979, following 50 years of employment.

He was a member of the American Foundry Society. He was also a member of the Presbyterian church and the Blackwell Bowling Association.

Surviving are his wife, Mary E. Fulton, of the home; two daughters, Deanna Sue Patterson of Oklahoma City, and Judith Hall of Moore; three sons, Jack Fulton of Bartlesville; Murray Hines of Fort Worth, Texas, and Patrick Hines of Roswell, Ga.; one brother, Eugene Fulton of Pomona, Calif.; eight grandchildren and five great-grandchildren.

He was preceded in death by one son, Eddy Mac Fulton; one brother, Harold Fulton and two sisters, Lucille Linn and Ruth Looney.

The casket will be open at the funeral home until 11:30 a.m. on Wednesday and at the church from 1 p.m. until 2 p.m. It will then be closed.

Memorial contributions may be made in Mr. Fulton's name to the Oklahoma Medical Research Foundation — heart fund. The funeral home will act as custodian of the fund.

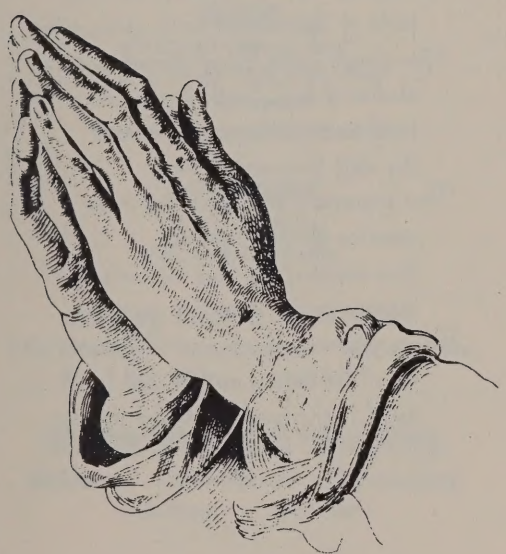
LYLE KENNEY FULTON



The Twenty Third Psalm

The Lord is my Shepherd: I shall not want.
He maketh me to lie down in green pastures:
He leadeth me beside the still waters.
He restoreth my soul: He leadeth me in the
paths of righteousness for his name's sake.
Yea, though I walk through the valley of the
shadow of death, I will fear no evil:
for thou art with me: thy rod and
thy staff they comfort me.
Thou preparest a table before me in the
presence of mine enemies:
thou anointest my head with oil:
my cup runneth over.
Surely goodness and mercy shall follow
me all the days of my life: and I will
dwell in the house of the Lord for ever.

Memorial contributions may be made in Mr. Fulton's name to the Oklahoma Medical Research Foundation — heart fund. The funeral home will act as custodian of the fund.

ROBERTS FUNERAL HOME
BLACKWELL, OKLAHOMA

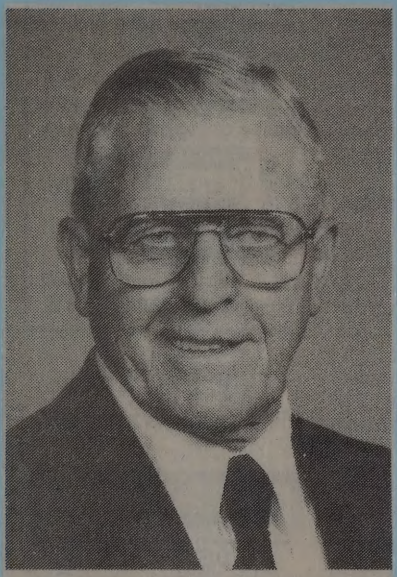
In Remembrance

Journal-Tribune Tuesday, February 28, 1995 Blackwell, Okla.



LYLE K. FULTON

Lyle Kenney Fulton of Blackwell died in the Baptist Medical Center in Oklahoma City on Friday, Feb. 24, 1995. He was 85.

His funeral will be Wednesday, March 1, at 2 p.m. in the Presbyterian Church in Blackwell with Rev. Geoffrey Pfaff officiating. Burial will follow in the Blackwell IOOF Cemetery under the direction of Roberts Funeral Home.

Casketbearers will be Fred Williamson, Jim Kincheloe, Max Kincheloe, Les Cartwright, Bob Miller and Jack Bell.

Honorary bearers will be Bill Brewer, Dale Shaw, Pete Anderson, Glendon Berry and Lee Elam.

Mr. Fulton was born July 9, 1909, in Marissa, Ill., to Howard Gordon and Margaret Josaphine (Kenney) Fulton. He moved with his parents to the Aurora, Neb., area, where he grew up and attended local schools.

He helped on the farm with his parents until 1927 when he moved to Blackwell to work for the Hazel-Atlas Glass Plant.

In 1928, he began working for the Acme Foundry in the core room, later becoming foundry superintendent.

He and Ruby Louise Turner were married on Oct. 25, 1930, in Blackwell. They settled here.

She preceded him in death.

He later married Mary E. Hines on Aug. 24, 1961. They settled in Blackwell.

Mr. Fulton retired from the foundry in 1979, following 50 years of employment.

He was a member of the American Foundry Society. He was also a member of the Presbyterian church and the Blackwell Bowling Association.

Surviving are his wife, Mary E. Fulton, of the home; two daughters, Deanna Sue Patterson of Oklahoma City, and Judith Hall of Moore; three sons, Jack Fulton of Bartlesville; Murray Hines of Fort Worth, Texas, and Patrick Hines of Roswell, Ga.; one brother, Eugene Fulton of Pomona, Calif.; eight grandchildren and five great-grandchildren.

He was preceded in death by one son, Eddy Mac Fulton; one brother, Harold Fulton and two sisters, Lucille Linn and Ruth Looney.

The casket will be open at the funeral home until 11:30 a.m. on Wednesday and at the church from 1 p.m. until 2 p.m. It will then be closed.

Memorial contributions may be made in Mr. Fulton's name to the Oklahoma Medical Research Foundation — heart fund. The funeral home will act as custodian of the fund.

The Twenty Third Psalm

The Lord is my Shepherd: I shall not want.
He maketh me to lie down in green pastures:
He leadeth me beside the still waters.
He restoreth my soul: He leadeth me in the
paths of righteousness for his name's sake.
Yea, though I walk through the valley of the
shadow of death, I will fear no evil:
for thou art with me: thy rod and
thy staff they comfort me.
Thou preparest a table before me in the
presence of mine enemies:
thou anointest my head with oil:
my cup runneth over.
Surely goodness and mercy shall follow
me all the days of my life: and I will
dwell in the house of the Lord for ever.

Lyle Kenney Fulton was born July 9, 1909 in Marissa, Illinois to Howard Gordon and Margaret Josaphine (Kenney) Fulton. He moved with his parents to the Aurora, Nebraska area on a farm and grew up there attending schools there. He helped on the farm with his parents until 1927 when he moved to Blackwell to work for the Hazel-Atlas Glass Plant. In 1928 he began working for the Acme Foundry in the Core Room then later becoming foundry superintendent. He married Ruby Louise Turner October 25, 1930 in Blackwell and they settled here. She preceded him in death and he later married Mary E. Hines August 24, 1961 and they settled in Blackwell. He retired from the foundry in 1978 following 50 years of employment. He was a member of the American Foundry Society and the Presbyterian Church. He was an avid bowler belonging to the Blackwell Bowling Association. He is survived by his wife, Mary E. Fulton of Blackwell; 2 daughters, Deanna Sue Patterson of Okla. City, Okla.; Judith Hall of Moore, Okla.; 3 sons, Jack Fulton of Bartlesville, Okla.; Murray Hines of Ft. Worth, Tex.; Patrick Hines of Roswell, Geor.; 1 brother, Eugene Fulton of Pamona, Calif.; 8 grandchildren and 5 great grandchildren. WORDS OF FAITH

Death is not ever easy to deal with...there is a finality that reminds us that we are not in control - that things on this planet happen over which we can do nothing - and that our lives have been changed with the death of a loved one. Today is Ash Wednesday, a day in the life of the church year, when we are reminded that we are not the ones around which the universe revolves. A day to come to God and to confess our weaknesses and to commit ourselves anew to following Jesus. It is a day when we acknowledge that we are but mortals and on our own, we are but ashes to ashes and dust to dust. But Ash Wednesday is also much more than that...because Ash Wednesday points us down the path to the Cross...it points us to Jesus and to the kind of God who is in control of this world.

The Scriptures I've just read, tell us about God...and this God is one who is not content to just let us do our own thing...to let "fate" take its course. The God of these Scriptures searches as a Shepherd for the lost; this Lord is one to whom we can look for help; this Jesus is one who promises to go before us to prepare a home for us and who will bring us safely there. This God is not one who keeps score in the heavens - and then who punishes us with infirmities or sufferings when we falter...this is a God who suffered himself...and who forgives and who promises us life. This is not a God who determines that men and women must make it according to their perfect lives, and then who watches as each one fails. This is a God who sent his Son, so that when we do fail, we have a Savior who is strong enough to lift us out of our sin. This is a God who promises life - no matter how dark the world is, no matter how frustrating the final days, no matter how many times we might fail or stumble...this God - in Jesus - came with the purpose of saving us, not condemning us.

As we face the struggles of this life, and as we celebrate the joys, this Jesus comes and enters our lives...and helps us to face the sorrows, joins with us in the joys and accomplishments, and walks beside us even when we enter the valley of death.

One of the things that Lyle really wanted to partake in these past few months was the sacrament of Communion. Several times it was planned, but it just never came together. The good news of the gospel is that our future is not solely dependent on our actions...communion with the almighty God is possible because of God's actions. And so even though Lyle did not have opportunity to partake of the Sacrament of Communion in the last few days of his life, he is experiencing "communion" now with the Lord of all of life, because of what God has done.

The good news on this Ash Wednesday, is that the story doesn't end today. The story may take us through ups and downs...through a jubilant crowd in Jerusalem to the angry mob at the Cross...but it doesn't end there. The story doesn't end with a dark Friday, there is an Easter morning...a Resurrection Day - which does not ignore the struggle, but which acknowleges it and overcomes it. The Scriptures remind us that Jesus suffered and died, but that he also rose again. They remind us that in the hands of God our lives are secure...no matter how dark the day is...and that we have nothing to fear in death, because Jesus has conquered death. This power over death is God's promise to those who believe. God does not just sit in the heavens and give us promises and words - in Jesus Christ, he has come in the flesh and by his actions has shown us that we can believe in his promises. Hear and believe this promise of Scripture.(Rev. 21)

WORDS OF REMEMBERING

These are some facts about Lyle Fulton. They tell us something about him...they remind us of his family and of his work, both of which were so important to him. But they don't capture who Lyle was - mere facts don't paint the kind of picture that memories of times shared with a person can paint. Those of you here shared those kinds of memories with Lyle. As the family has shared some of their stories of Lyle with me I have seen what a rich life he lived and what a fun-loving family he has raised and been a part of. I just want to take a moment to share a few words that capture a bit of who Lyle was to those closest to him.

When Lyle's family talked of him, and of their memories as a blended family...there was great exuberance in their voices. Lyle was a person full of life. From the pranks he played as a young boy to the humor he displayed during his last days, Lyle was one who enjoyed sharing joy with others through his sense of humor, through his playful teasing. It was very moving to me to see how much joy he had shared with his children and his family and how much they enjoy life...it is a tribute to his love of life that he would pass it on to his family. It was clear that he passed that joy on to his wife Micki as well. One of the first things that Lyle told me when I met him...was how he met Micki. They were both widowed and both had children...all but Pat being grown and out of the home. They met on a blind date...and I was told later how they both tried to get out of going on that date. But it was a relationship that would bring much joy - not only to Lyle and Micki, but also to their children. Lyle was a person who was full of life.

Lyle also loved to tell stories. I could see that he also passed on the art of telling a story to his children. Lyle would often tell me fascinating stories from his past. He never seemed to forget those stories and would tell them as if they had happened just yesterday. He had a lot of stories to tell because Lyle was one who had numerous skills and interests. Whether it was working long hours at the foundry or singing songs from his boyhood or growing strawberries in his backyard or carving wonderful figures from wood or bowling a perfect game or trying to help Pat with the impossible task of keeping his car started, Lyle went at life with zest and excitement. His many experiences made it possible for him to tell all those stories with that twinkle in his eye and that sheepish looking grin.

But a side of Lyle that I observed in my short friendship with him was the tender side. The side of Lyle, that in spite of all the experiences and joy he had discovered in life, also saw the hard parts of life and was painfully aware of the limitations that each of us have in life. Lyle was a person who wanted to take care of things - NOW! And so it was frustrating for him when his health wouldn't allow him to take care of everything; it was painful for him when he couldn't solve all the challenges that age brought to him and to Micki. And so I would guess that life also brought a lot of whistling from Lyle - which is what he did when nervous; life also brought its share of tears...tears and prayers that showed me how tender Lyle was and how aware he was of his deep need for God. Both Micki and Lyle had to learn in sometimes hard ways, to give one another's lives into the hands of of our God of hope and of promise. And although it was a difficult part of his life, and although it was not filled with the kind of laughter that so many shared with Lyle, I believe it was founded on the real joy that only God can bring. And for me, painful as

they were, those times of prayer and of tears with Lyle and with Micki, demonstrated a trust in Jesus Christ that is born not in the easy times, but through the struggles of life.

Those are some pictures from the life of Lyle Fulton. Some of you may remember the laughter, the stories, the tenderness, the faith; for others, your memories may be altogether different. So I want to give each of you a chance to remember Lyle as you knew him. And to take time to thank God for the unique way that he touched your life. After a time of silent prayer, I will close with a spoken prayer, and then I invite you to join in praying the Lord's Prayer. Let us come to God and give him thanks for the gift of Lyle Fulton. (Silent prayer / spoken prayer / Lord's Prayer)

"On Eagles' Wings" - Ray Cantwell, organ

The song that Ray just played is entitled "On Eagles' Wings". I want to read one verse and the chorus from this special song...

> "You who dwell in the shelter of the Lord,
> who abide in his shadow for life,
> say to the Lord: "My refuge,
> my Rock in whom I trust!"
> And he will raise you up on eagles wings,
> bear you on the breath of dawn,
> make you to shine like the sun,
> and hold you in the palm of his hand."

As you commit Lyle into the palm of God's hand, one of the things that you can do to honor Lyle's life is to strive to live out those qualities in Lyle that were positive. May I challenge you to do the same. May you enjoy this life that God has given you; may you laugh together; may you share in one another's lives; may you live life in such a way that you can tell stories as Lyle did; and may you love one another and care for one another as family and friends...and trust your lives in the hands of Jesus Christ - who alone can bring you lasting joy.

****

May the Prince of Peace grant you that serenity, that peace that only He can give;

May God the Father give you courage to live the days ahead;

And may the Holy Spirit grant you the wisdom that comes in walking with God. Amen.

"On Eagles Wings" - Ray Cantwell, organ

Closing remarks and Benediction

Closing Music ("I'll Fly Away" as casket is being removed)

WORDS OF FAITH

Death is not ever easy to deal with...there is a finality that reminds us that we are not in control - that things on this planet happen over which we can do nothing - and that our lives have been changed with the death of a loved one. Today is Ash Wednesday, a day in the life of the church year, when we are reminded that we are not the ones around which the universe revolves. A day to come to God and to confess our weaknesses and to commit ourselves anew to following Jesus. It is a day when we acknowledge that we are but mortals and on our own, we are but ashes to ashes and dust to dust. But Ash Wednesday is also much more than that...because Ash Wednesday points us down the path to the Cross...it points us to Jesus and to the kind of God who is in control of this world.

The Scriptures I've just read, tell us about God...and this God is one who is not content to just let us do our own thing...to let "fate" take its course. The God of these Scriptures searches as a Shepherd for the lost; this Lord is one to whom we can look for help; this Jesus is one who promises to go before us to prepare a home for us and who will bring us safely there. This God is not one who keeps score in the heavens - and then who punishes us with infirmities or sufferings when we falter...this is a God who suffered himself...and who forgives and who promises us life. This is not a God who determines that men and women must make it according to their perfect lives, and then who watches as each one fails. This is a God who sent his Son, so that when we do fail, we have a Savior who is strong enough to lift us out of our sin. This is a God who promises life - no matter how dark the world is, no matter how frustrating the final days, no matter how many times we might fail or stumble...this God - in Jesus - came with the purpose of saving us, not condemning us.

As we face the struggles of this life, and as we celebrate the joys, this Jesus comes and enters our lives...and helps us to face the sorrows, joins with us in the joys and accomplishments, and walks beside us even when we enter the valley of death.

One of the things that Lyle really wanted to partake in these past few months was the sacrament of Communion. Several times it was planned, but it just never came together. The good news of the gospel is that our future is not solely dependent on our actions...communion with the almighty God is possible because of God's actions. And so even though Lyle did not have opportunity to partake of the Sacrament of Communion in the last few days of his life, he is experiencing "communion" now with the Lord of all of life, because of what God has done.

The good news on this Ash Wednesday, is that the story doesn't end today. The story may take us through ups and downs...through a jubilant crowd in Jerusalem to the angry mob at the Cross...but it doesn't end there. The story doesn't end with a dark Friday, there is an Easter morning...a Resurrection Day - which does not ignore the struggle, but which acknowleges it and overcomes it. The Scriptures remind us that Jesus suffered and died, but that he also rose again. They remind us that in the hands of God our lives are secure...no matter how dark the day is...and that we have nothing to fear in death, because Jesus has conquered death. This power over death is God's promise to those who believe. God does not just sit in the heavens and give us promises and words - in Jesus Christ, he has come in the flesh and by his actions has shown us that we can believe in his promises. Hear and believe this promise of Scripture.(Rev. 21)

WORDS OF REMEMBERING

These are some facts about Lyle Fulton. They tell us something about him...they remind us of his family and of his work, both of which were so important to him. But they don't capture who Lyle was - mere facts don't paint the kind of picture that memories of times shared with a person can paint. Those of you here shared those kinds of memories with Lyle. As the family has shared some of their stories of Lyle with me I have seen what a rich life he lived and what a fun-loving family he has raised and been a part of. I just want to take a moment to share a few words that capture a bit of who Lyle was to those closest to him.

When Lyle's family talked of him, and of their memories as a blended family...there was great exuberance in their voices. Lyle was a person full of life. From the pranks he played as a young boy to the humor he displayed during his last days, Lyle was one who enjoyed sharing joy with others through his sense of humor, through his playful teasing. It was very moving to me to see how much joy he had shared with his children and his family and how much they enjoy life...it is a tribute to his love of life that he would pass it on to his family. It was clear that he passed that joy on to his wife Micki as well. One of the first things that Lyle told me when I met him...was how he met Micki. They were both widowed and both had children...all but Pat being grown and out of the home. They met on a blind date...and I was told later how they both tried to get out of going on that date. But it was a relationship that would bring much joy - not only to Lyle and Micki, but also to their children. Lyle was a person who was full of life.

Lyle also loved to tell stories. I could see that he also passed on the art of telling a story to his children. Lyle would often tell me fascinating stories from his past. He never seemed to forget those stories and would tell them as if they had happened just yesterday. He had a lot of stories to tell because Lyle was one who had numerous skills and interests. Whether it was working long hours at the foundry or singing songs from his boyhood or growing strawberries in his backyard or carving wonderful figures from wood or bowling a perfect game or trying to help Pat with the impossible task of keeping his car started, Lyle went at life with zest and excitement. His many experiences made it possible for him to tell all those stories with that twinkle in his eye and that sheepish looking grin.

But a side of Lyle that I observed in my short friendship with him was the tender side. The side of Lyle, that in spite of all the experiences and joy he had discovered in life, also saw the hard parts of life and was painfully aware of the limitations that each of us have in life. Lyle was a person who wanted to take care of things - NOW! And so it was frustrating for him when his health wouldn't allow him to take care of everything; it was painful for him when he couldn't solve all the challenges that age brought to him and to Micki. And so I would guess that life also brought a lot of whistling from Lyle - which is what he did when nervous; life also brought its share of tears...tears and prayers that showed me how tender Lyle was and how aware he was of his deep need for God. Both Micki and Lyle had to learn in sometimes hard ways, to give one another's lives into the hands of of our God of hope and of promise. And although it was a difficult part of his life, and although it was not filled with the kind of laughter that so many shared with Lyle, I believe it was founded on the real joy that only God can bring. And for me, painful as

they were, those times of prayer and of tears with Lyle and with Micki, demonstrated a trust in Jesus Christ that is born not in the easy times, but through the struggles of life.

Those are some pictures from the life of Lyle Fulton. Some of you may remember the laughter, the stories, the tenderness, the faith; for others, your memories may be altogether different. So I want to give each of you a chance to remember Lyle as you knew him. And to take time to thank God for the unique way that he touched your life. After a time of silent prayer, I will close with a spoken prayer, and then I invite you to join in praying the Lord's Prayer. Let us come to God and give him thanks for the gift of Lyle Fulton. (Silent prayer / spoken prayer / Lord's Prayer)

"On Eagles' Wings" - Ray Cantwell, organ

The song that Ray just played is entitled "On Eagles' Wings". I want to read one verse and the chorus from this special song...

> "You who dwell in the shelter of the Lord,
> who abide in his shadow for life,
> say to the Lord: "My refuge,
> my Rock in whom I trust!"
> And he will raise you up on eagles wings,
> bear you on the breath of dawn,
> make you to shine like the sun,
> and hold you in the palm of his hand."

As you commit Lyle into the palm of God's hand, one of the things that you can do to honor Lyle's life is to strive to live out those qualities in Lyle that were positive. May I challenge you to do the same. May you enjoy this life that God has given you; may you laugh together; may you share in one another's lives; may you live life in such a way that you can tell stories as Lyle did; and may you love one another and care for one another as family and friends...and trust your lives in the hands of Jesus Christ - who alone can bring you lasting joy.

****

May the Prince of Peace grant you that serenity, that peace that only He can give;

May God the Father give you courage to live the days ahead;

And may the Holy Spirit grant you the wisdom that comes in walking with God. Amen.

You have our sympathy in the loss of your father. He was a loving father & wonderful neighbor - we want you to know we enjoyed having the Fultons for our good neighbors all these yeard and will always remember the Cheerful & tearful Visits we had. They loved their family Very much

Our Prayer now is for a Merciful recovery of mrs Fulton and strength for the family

The Ray Long's - Next door

May time accomplish
What no words can do
And bring some measure
Of comfort to you.

Love & Prayers
The Longs

Words seem so inadequate,
But may these help some way
To let you know that many thoughts
Are there with you today.

With Sincere Sympathy

Dear Mary,

I was so sorry to hear about Lyle. I didn't know how sick he was. Lyle was such a special person and full of life. I never could believe his age because he was so active. He was an inspiration to all who knew him. I always enjoyed his visits to the dental office. Lyle is in a better place now and doesn't have to suffer anymore. He will truly be missed. I'm sure your faith, family and friends will help you through this hard time. I am glad that I had the pleasure to know him. My thoughts and prayers are with you. Sincerely,

Leslie Brown (Dr. London's office)

Dear Lyle -

We are so sorry to hear that you are back in the hospital. One darn thing after another, isn't it? You have had more than your share. But we feel sure you will come out on top. You have a lot of character, determination and fortitude! You are a real fighter - plus you have all these people in Blackwell pulling for you! You do have a lot of friends and they are praying and hoping for the very best. Roy & Lucille went to visit Mickey yesterday. Said she looked really good and acted like she felt real good. So that was good news.

Not much going on in the neighborhood these days - just trying to keep up with the Fulton family.

Really nice weather here this week so hurry on back - we'll sit on the porch and watch the grass grow!

Love

Corky & Jack Bell

931 N. 7th St. B'well

GOD SAW YOU GETTING TIRED

AND A CURE WAS NOT TO BE,

SO HE PUT HIS ARMS AROUND YOU

AND WHISPERED, "COME WITH ME."

WITH TEARFUL EYES WE WATCHED YOU

AND SAW YOU PASS AWAY,

AND THOUGH WE LOVE YOU DEARLY,

WE COULD NOT MAKE YOU STAY.

A GOLDEN HEART STOPPED BEATING,

HARD -WORKING HANDS

WE PUT TO REST

GOD BROKE OUR HEARTS TO PROVE TO US

HE ONLY TAKES THE BEST.

Dear Dee,

I was deeply saddened when I heard that you had lost your father.

I have been thinking of you since then. Please accept this letter as my heartfelt condolences to you. I would have liked to spend some time with you to personally extend my sympathy to you but you know how things are at school..we are always running in different directions all day long.

I want you to know that I value your friendship very much and you will always be in my prayers in times like these.

As a very dear friend of mine I want you to know one thing that I have learned personally about loosing someone very close to you...grief is a heartache that heals very slowly, life can be tough, but so are we. We may feel fragile, but we are actually pretty resilient. We surprise ourselves, and others too, by picking up the pieces-moving through our bad times, facing life´s challenges, and seeing the beauty of the world once again.

I never met your dad but yet I feel like I knew him for a long time just from talking to you. He will be missed sadly, but he will always be in our hearts.

Sincerely

Gilbert.

GOD SAW YOU GETTING TIRED

AND A CURE WAS NOT TO BE,

SO HE PUT HIS ARMS AROUND YOU

AND WHISPERED, "COME WITH ME."

WITH TEARFUL EYES WE WATCHED YOU

AND SAW YOU PASS AWAY,

AND THOUGH WE LOVE YOU DEARLY,

WE COULD NOT MAKE YOU STAY.

A BLACKWELL INSTITUTION Since 1926

E. C. GRAHAM, president of the Acme Foundry, and His Associates are proud to be a part of the great Cherokee Strip country. Fantastic as the progress of the area has been, the progress and growth of the Acme Foundry has been no less impressive. Since its establishment in Blackwell 27 years ago, Acme has grown in capacity as well as in reputation with hundreds of manufacturers in the Middle West. The name of Blackwell has been brought into almost every state through Acme castings. The volume production of high quality grey iron castings is a business few foundries attempt. However, Acme Foundry, as one of the oldest licensees of the famous Sorbo-Mat process of controlled specification irons, has long been recognized as the leader in the industry. During the past several years, there has been a constant program of plant improvement and growth. The last year the pouring capacity of the foundry has been increased 30%. Acme is pleased to participate in the 60th Anniversary celebration of the opening of this great area.

Clinton Miller Started Run From Caldwell Area

A man only 100 yards ahead of him in the race for land in the Cherokee Strip run jumped off his horse and beat Clinton D. Miller to the land which he wanted.

Miller, a Nardin pioneer, made the run with a friend and neighbor of his, Andrew Storck, from the line four miles east of Caldwell.

When Miller staked his claim he was 5½ miles north and 3½ west of the present town of Nardin.

In the morning when he looked around the claim, he found that there was another fellow on the land with him, and knowing that court battles to get the land would cost him money which he didn't have, he let him have the land.

Miller came to Kansas from Millersburg,Pa., with his family in 1884.

Many rumors were heard about the opening, it was reported by Miller, and often there would be a false alarm and all those wanting claims would get their horses and dash in to make a claim, only to be driven out by soldiers sent in from Washington.

When the cattle men cleared out the fences which they had put up, the government came in and set up cornerstones, getting the land ready for permanetnt settlement.

Miller had to stand in line to register for the Run from 8 a.m. one day until 12 noon the following day.

After he had given up his claim and was back in Kansas after the Strip run, he heard of a man who wasn't going to be able to keep his claim, so Miller told him he'd give him a team of horses and some cash.

Miller got the claim, 160 acres, a year after the opening.

All during the first year, he spent time driving back and forth between his parent's Kansas farm and the claim, making improvements.

He dug a wel, built fences and a dugout.

It was in 1895 that he moved to his present land since he didn't want to live there for the first two years.

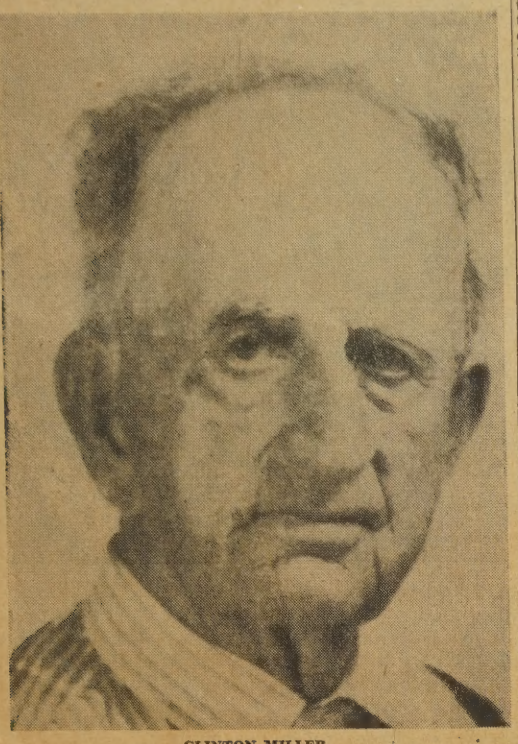
Miller, married in 1881, moved with his wife into the two-room house which he had built.

In 1897 he added another room, and in 1901 he expanded it to its present size.

Miller thanks Dennis Flynn, congressman for the territorial government of Oklahoma, for the fact that a lot of settlers didn't lose their lands.

They (the settlers) had been paying anywhere from $1 to $2.50 an acre for land, and Flynn introduced and fought for a bill that gave the lands free.

Mrs. Miller died in January of 1948.



CLINTON MILLER

Paul and Pierre Mallet, two French traders and six attendants, in 1740 traveled up the Arkansas River, and probably were the first white men to set foot in Kay county.

Kickapoo Indian Agency Once Was Located Right At Bitter Creek Mouth

(This is one of several articles in this issue of the Journal-Tribune, written by James C. Henderson. The articles have to do with the Kay-Grant county are where Henderson punched cattle as early as 1894. The stories are now a part of the Chronicles of Oklahoma. The Editor.)

By JAMES C. HENDERSON
The Stampede

In March, 1874, we put in a cattle camp on the Chikaskia river, near its mouth, and not far from the place where the Nez Perces agency was afterward established.

There were five of us in the camp that spring. I was sixteen and one-half years old and the others were all grown men.

We had a kind of "straw boss" who was known as Colonel O. P. Johnson. He claimed to have been at one time a renowned scout and Indian fighter, and, to judge from the great stories he used to tell, one would be led to think that he had fought Indians all the way from the Pecos to "the Shinneries," and then some.

There was no other camp in that country between the Arkansas river and the old Sewell stockade, at the Pond Creek crossing on the Chisholm Trail.

The only other white people in that country were the government employes at the Kickapoo Agency, which was located near the mouth of Bitter Creek.

The Kickapoo agent was an old Quaker named Williams. The Kickapoos seemed to be nearly all women, most of the men having been killed in fighting the American and Mexican troops on the Rio Grande. There were a few Mexicans with the Kickapoos.

One day there was considerable excitement among the Kickapoos. One of the women was missing for about a half day. They thought the Osages had stolen her. The next day a Mexican told us that she had been fishing on the Chikaskia river.

The cattle we were holding belonged to my father and to old Parson Slaughter of Texas. Parson Slaughter was the father of John, Bill and Colonel C. C., all of whom own some of the largest ranches in Texas at this time. The old parson had moved to Emporia, Kansas, where John and Bill were going to school.

My father's cattle were common Kansas stock but those of Parson Slaughter were from Texas and were of the vintage of the sixties. Some of them were eight years old and their horns were a fright.

These cattle were regular old coasters.

Our saddle horses had all kinds of Mexican brands. Such kinds of horses and cattle were very common in those days, but they would be a curiosity now. We did not realize at the time the kind of a menagerie we had.

One afternoon, after we had been at the camp about a month, we saw a band of Indians coming down the big flat east of the Chikaskia. They were coming toward our camp and, as they drew near, we saw they were the Kickapoos.

They were coming to pay us a visit and, incidentally, to ask if we would give them a beef. They had always treated us very well and had not molested anything of ours, so we gave them a beef. It was on this occasion that Colonel Johnson shone at his best. He told the Kickapoos that he owned all of the cattle and horses and that the rest of us were his hired hands.

It was quite refreshing to watch him ride at the head of this Kickapoo band, showing them his big herd of cattle.

After they had been given a beef, a Mexican shot it, and, after it had been dressed, they brought a large chunk of it over to our camp, after saying "gracious" several times which, in Mexican, means "thank you." They then started back to their agency.

Early one morning, about the first of May, we heard a great commotion among the cattle. We were eating breakfast at the time. We jumped on our horses and ran to find the cause of the commotion.

The cattle had been rounded up on the big flat between Duck Creek and the Chikaskia about dark, the evening before. Right in the middle of the herd, we found an Osage mourning party, waving their blankets and yelling like Basha Bazooks. The way those old "coasters" did run was certainly a caution.

We enjoyed the fun almost as well as the Osages did, but we had to do several miles of hard riding to get the cattle together again.

The Indians ran west and crossed the Chikaskia when they saw us coming. They did not try to kill any of the cattle—they evidently just wanted to see them run.

These Indians then went on west up the Salt Fork, and they killed a man near where the Black Dog Trail crossed Pond Creek.

This man belonged to an outfit that was coming up the trail from Texas with a herd. Some of the cattle had strayer off and he was hunting for these strays when the Indians found him.

Shortly after this stampede, John and Bill Slaughter brought an outfit and took their cattle to the Flint Hills, in Kansas. We then moved our cattle up near the state line, as it was not considered safe to stay on Salt Fork in the summer time.

That summer we helped to drive a herd of cattle to Emporia. While I was there on the street one day, I met old Parson Slaughter. He told me that his cattle had gotten fat and that he would ship them in a few days and that he would then go back to Texas.

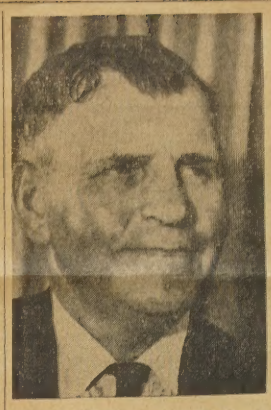
While we were talking someone hallooed, "grasshoppers!" We looked toward the sun and we could see them passing over by the million. None of the grasshoppers lit that day but the next morning the ground was alive with them.

I went home a few days later and all the way down the Walnut river, they had eaten all green vegetation and, in some places, the trees had been defoliated by these insect invaders.

In the fall of 1874, the Deans put their cattle with ours and we moved by easy stages back to the Salt Fork We went to the Kickapoo agency but our friends, the Kickapoos, had left.

There stood the agency building all empty. They had gone to another reservation on the North Canadian river.

We drifted on and established our winter camp on Pond Creek, about one mile from Salt Fork.



RAY ELLEDGE, west of Blackwell, will be superintendent of department A, beef cattle, one of the most important at fair time.

Mission Project Began PH Church

Beginning on May 21, 1939, the organizational meeting of the Pilgrim Holiness church here in Blackwell lasted for six weeks.

The church grew out of a home missionary project of the Oklahoma district Pilgrim Holiness church.

After the close of the meeting on July 11, 1939, another organizational meeting was held in the home of Mrs. Harve Billbe.

A blacksmith shop was the scene of the first worships of the church and after that the group worshiped in the chapel of what had been the Roberts mortuary on Blackwell.

Construction of the new church was begun on Sept. 18,1951, and it was dedicated Sunday, Feb. 17, 1952.

Brief News

Personal items and brief news constituted a large part of "The Kay County Sun," one of Blackwell's earliest newspapers. Here are some of these personals reprinted from the March 3, 1898 issue of that paper.

Wm. Vickery and Frank Yeoman of Newkirk, are in the city to-day.

J. R. Tate went to Perry this morning.

Attorney W. C. Tetirick went to Newkirk this morning to attend district court.

W. S. Prettyman has taken one instantaneous picture of the Htuchinson & Southern railroad entering Blackwell. This picture shows the track layers, engine, cars and a great multitude of spectators.

Wm. Atwater, civil engineer, of Hutchinson, and brother-in-law of Receiver Walker, is building one of the finest residences in the city. It thus appears that the H. & S. sees a great future in Blackwell, as so many people more or less interested with this line are locating here.

Ed Cornell went to Belle Plaine this morning, where Mrs. Cornell has been for some time, attending the bed side of her mother.

R. P. and S. P. Kern shipped two car loads of hogs over the H. & S. today.

Thirty Men Employed at Tonkawa Foundry, One of Young County Industries

(The following article is for the most part a reprint from the February, 1953, issue of Consolidated Gas Utilities corporation's monthly magazine, "The Consolidator". The Editor.)

TONKAWA—One of northern Oklahoma's most important industries, the Tonkawa Foundry, is by no means a pioneer institution, but in the short space of 36 months, has made unbelievable progress.

Cliff Salisbury, owner and manager, has been in the business of turning out castings to meet specifications to the thousandth of an inch since 1929.

Owner of the bustling Tonkawa industry Salisbury is a young man, but never-the-less he's a pioneer in his field, and he's never still a minute.

Only last July the foundry tested, and found successful, a new automatic mould conveyor which Salisbury designed, built and perfected as a factory mechanization improvement.

The oval shaped conveyor takes the moulds in a production circle where castings are made, cooled and the forms removed.

The improvement revolutionizes the casting system from manual to a simple process involving the pressing of three levers.

The conveyor is for use on big production jobs.

In a progressive, rather than a pioneering, manner, the firm has recently completed additions for the moulding room and the furnace room.

Tonkawa Foundry melts iron, brass, bronze and aluminum, pours the molten metal into moulds and produces castings of all sizes, shapes and descriptions, and for thousands of different uses.

A native of Independence, Kans., Salisbury first went into the foundry business there, later at Dewey, then came to Tonkawa in 1950.

Tonkawa had no foundry at that time and the city offered great possibilities. The Wetmore Hammermill Co., of Tonkawa is a good customer, but Salisbury ships the finished product to many far-away points.

Geared for rapid and mass production, the average order turned out by Tonkawa Foundry is about 20,000 pieces, but orders for a three month period for one customer would not be unusual if they called for 200,000 pounds of castings in more than 300,000 pieces.

Thirty men, most of them recruited in the Tonkawa area, are employed at the foundry, all of them specialists at their particular job, Salisbury said that of that group, 10 are exceptionally skilled.

Castings business begins when refined metal is placed in the furnace. When the metals have reached the necessary hot point for pouring, employes draw the molten metal into large containers, carry them to sand moulds and ladle the hot stuff in by hand.

The moulds are prepared by the tamping of sand around wooden or metal patterns, which are then removed to await the hot metal which, after it cools, assumes the same shape as the pattern.

After cooling, the moulds are overturned, castings removed and taken to a cleaning room where all sand is removed by shot-blasting machines.

Rough edges are ground away and castings machined to exact specifications before they are shipped ready for assembly.

Salisbury recently remodeled the south end of his building to make more moulding room.

Most of the castings are sold to the general jobbing trade for use in the gas and oil industry, the machine industry and the manufacturing of agriculture equipment.

Salisbury's "lead" men are shop foreman Melvin Solomon, Ted Harman in grinding and cleaning, Delbert Van Blaricom in the core room, Bill Stowers in the melting room and Bill Southern in the moulding room.

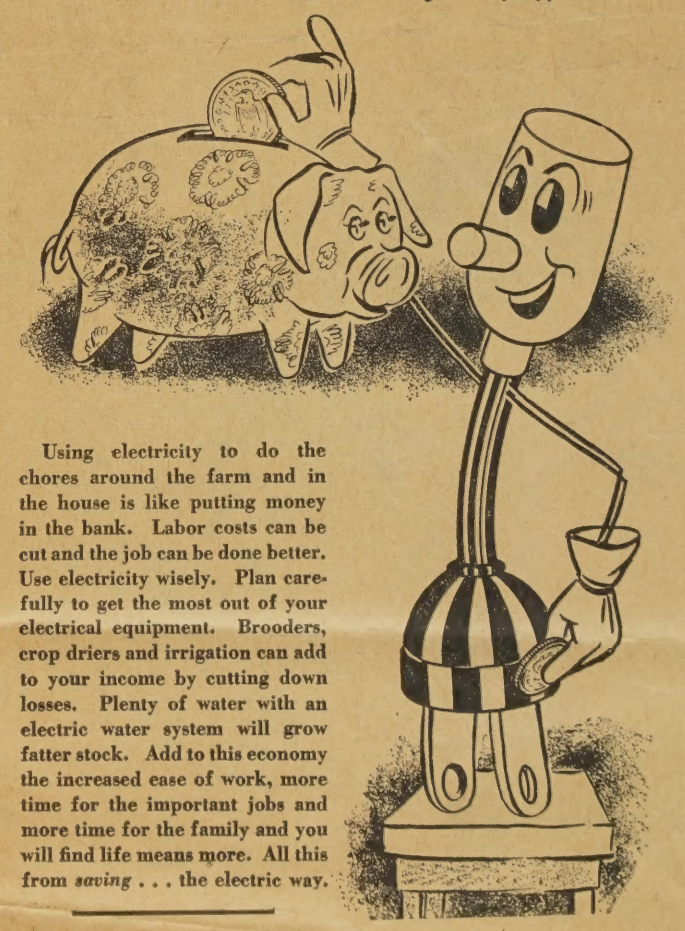
One of Tonkawa's Industries, Tonkawa Foundry

ELECTRICITY

60th Anniversary — Commemorating CHEROKEE STRIP RACE FOR LAND — SEPTEMBER 1893 1953 — BLACKWELL, OKLAHOMA

The Greatest Contribution To Agricultural Progress Since the Opening of the Cherokee Strip!

SAVE...THE ELECTRIC WAY...



Using electricity to do the chores around the farm and in the house is like putting money in the bank. Labor costs can be cut and the job can be done better. Use electricity wisely. Plan carefully to get the most out of your electrical equipment. Brooders, crop driers and irrigation can add to your income by cutting down losses. Plenty of water with an electric water system will grow fatter stock. Add to this economy the increased ease of work, more time for the important jobs and more time for the family and you will find life means more. All this from *saving* . . . the electric way.

Kay Electric Co-operative

A BLACKWELL INSTITUTION

Since

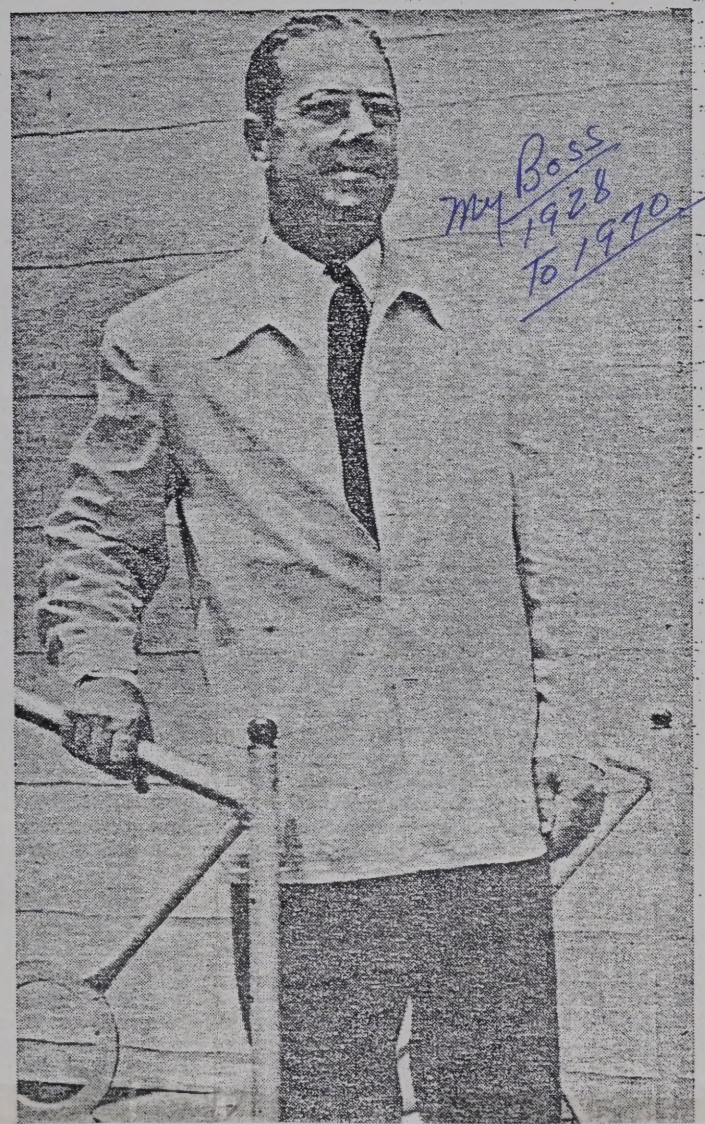
1926

E. C. GRAHAM, president of the Acme Foundry, and His Associates are proud to be a part of the great Cherokee Strip country. Fantastic as the progress of the area has been, the progress and growth of the Acme Foundry has been no less impressive. Since its establishment in Blackwell 27 years ago, Acme has grown in capacity as well as in reputation with hundreds of manufacturers in the Middle West. The name of Blackwell has been brought into almost every state through Acme castings. The volume production of high quality grey iron castings is a business few foundries attempt. However, Acme Foundry, as one of the oldest licensees of the famous Sorbo-Mat process of controlled specification irons, has long been recognized as the leader in the industry. During the past several years, there has been a constant program of plant improvement and growth. The last year the pouring capacity of the foundry has been increased 30%. Acme is pleased to participate in the 60th Anniversary celebration of the opening of this great area.

BLACKWELL DAILY JOURNAL-TRIBUNE (Okla.) Sunday, June 19, 1955

Acme Foundry To Open Its Rebuilt Plant on Monday

Job Called Miraculous By Graham



Ethan C. Graham and his Acme Foundry and Machine company have set the pace for the huge rebuilding job that faces the tornado-stricken area of Blackwell.

The thriving industry, which employs 135 men, was not completely destroyed inside as the result of the May 25 tornado, but only the office remained standing of the 15 or 16 which were in operation the night of the big blow.

It took workmen exactly three weeks to completely reconstruct the plant. In fact, Saturday one more building was standing there than was up before the storm.

Fighting against time, Graham said immediately following the storm that he would be back in business June 20. Monday is June 20, and the foundry will be pouring castings again tomorrow.

The plant looks much the same as it did before, as far as the locations of the buildings are concerned. All were built back in the same places except the pattern shop, which is now in a different spot.

In addition two new pattern storage buildings have been erected and the machine shop, which is doing temporary business at Sixth and Furguson streets, is yet to be constructed.

It hasn't even been started yet, because it was able to operate in another location for the scrap, yet suffered only a bump on the head, a bruised leg and a scratched finger," Graham said.

"He wanted to go right on home, but we insisted that he stay in the hospital overnight," Graham said.

The owner of the industry said that the Blackwell Zinc company loaned them valuable machines in the cleanup process.

"Patterns are the life blood of a foundry," Graham pointed out. "How they did it, I'll never know, but in two days time the men moved thousands of them to dry quarters at the fairgrounds, sorted them, and laid them out as to customer. It was a miraculous job."

It was pointed out that the foundry suffered a big loss of cranes, those overhead conveyances which carry molten metal to the molds. They were all knocked down, and the I-beams on which they run were twisted and ruined.

As a general rule, all of the heavier equipment damaged wasn't ruined. The smaller tools were hurt, and many of them lost. All of the heavy equipment damaged badly, is now being overhauled.

Of course, all of the wiring, gas lines and air lines (most equipment is operated pneumatically) had to be put in new.

Ten or 12 carpenters were put on the job to help foundry workers, and four others hired to complete the task.

Graham said that he carried adequate insurance on the plant.

"At least we believed it adequate, and under ordinary circumstances, it would have been.

"But our first thought was to get the plant back in operation, without thought of expense. Right now I can't say how much money it will cost me.

"I haven't had time to give it any thought. We didn't question the price of anything, it was just a question of whether or not it was available, and how quickly they could get it here.

"We've been paying good straight time, time and a half, and in many cases double time. I didn't tell any of our customers we were hit. Most of our big clients knew about it and were here to inspect their patterns.

"I wanted to wait until I had something good to tell them, and when the plant was ready to go into operation again Thursday, I had a letter, complete with pictures of before, after and now, printed up, and the brochure goes into the mails Saturday tornado and the progress we are making, we are enclosing a photograph of the plant prior to the storm, one taken the day following the storm, and one as the plant looks today, June 17.

"Since the very instant the storm struck, our one aim has been to get our plant into business as quickly as possible. That goal is now in sight and we will be pouring castings again on June 20.

'The patterns we removed from the plant early the following morning of the storm. We have concentrated our efforts on rebuilding and have taken time only to give the patterns a quick check.

"We believe that very few patterns are completely lost, but we have not been able to ascertain the damage to all patterns.

"Several customers have been here to check their own patterns from this angle. We will of course accomplish this job eventually, but if you desire this information quickly, for insurance purposes, we suggest you contact us and we will be glad to assist any of your men in this job.

"Also, as a result of the storm, we are finding ourselves short of pattern storage space. If you have any patterns in our plant that are permanently inactive, we would appreciate your advising if we may return them to you, or if you desire we can destroy them.

"It would be impossible to define the great sense of gratitude we feel toward our customers for their loyalty, patience and assistance during this critical period. We can only pledge our continued policy of better service and better quality."

TO ALL OUR FRIENDS AND CUSTOMERS:

You have probably heard that on Wednesday evening, May 25, 1955 our plant was virtually destroyed by a tornado that swept the east side of Blackwell.

To give you a clearer picture of the damage caused by the tornado and the progress we are making, we are enclosing a photograph of the plant prior to the storm, one taken the day following and one as the plant looks today, June 17, 1955.

Since the very instant the storm struck our one aim has been to get our plant into business as quickly as possible. That goal is now in sight and we will be pouring castings again on June 20, 1955.

The patterns were removed from the plant early the following morning. We have concentrated all our efforts on rebuilding and have taken time only to give the patterns a quick check. We believe that very few patterns are completely lost, but we have not been able to ascertain the damage to all patterns, as yet. Several customers have been here to check their own patterns from this angle. We will, of course, accomplish this job eventually, but if you desire this information quickly, for insurance purposes, we suggest you contact us and we will be glad to assist any of your men in this job.

Also, as a result of the storm we are finding ourselves short of pattern storage space. If you have any patterns in our plant that are permanently inactive we would appreciate your advising if we may return these patterns to you, or if you desire we could destroy them.

It would be impossible to define the great sense of gratitude we feel toward our customers for their loyality, patience and assistance during this critical period. We can only pledge our continued policy of better service and better qualitity.

Very truly yours,

ACME FOUNDRY & MACHINE CO.

E. C. Graham,
President

New Corporation Will Operate Acme Foundry

As the result of an agreement made several years ago between the late Ethan C. Graham, former owner and manager of Acme Machine and Foundry company, and six of his key employees, a new corporation is to be formed and will assume operation of the plant shortly after the first of the year, a spokesman fo rthe group told the Journal-Tribune Friday.

The agreement was entered into by Graham and the following six men who will purchase all of the fixed assets of the company: Lyle Fulton, Jack Graves, Roger Goff, Charles Diel, John Thompson and Dick B ;ten.

The company will continue operation at the same location, 400 East Frisco, and the organization and formation of the new corporation will take place late in December.

No major changes in policy or personnel is contemplated. The new owners intend to operate the company in much the same manner as it was by E. C. Graham.

Controlling Interest is Acquired by Two Ponca City Men

Acme Foundry and Machine Company, 400 East Frisco, Saturday announced completion of reorganization plans, the election of Charles M. Diel, 721 West Florence, as president, and the purchase of controlling interest by two Ponca Citians, Jerry Evans, and James W. Buttram.

Too, the promotion of several key employees was announced. The action followed the expected incorporation after the Oct. 27 death of Ethan C. Graham, 69, the firm's founder.

Evans and Buttram, both Ponca City industrialists, made it emphatic that Acme Foundry "is a Blackwell industry and will remain that way in the same tradition and practices instituted by Mr. Graham."

John Thompson, 944 North Sixth, is the new vice-president; Roger Goff, 314 Fairview the new secretary and treasurer; Jack Graves, 1902 South Third vice president of operations; Lyle Fulton, 939 North Seventh foundry manager; Richard K. Batten, 1512 South Second vice president of Sales, and Merle McKern, 715 West Blackwell, manager of the machine shop.

Buttram, 44, owner of Buttram Pipe Line Construction company of Ponca City and Tulsa, is engaged in various ventures, including serving as president of Buttram Industries Corporation, Ponca City; president of North Park Development Company, Ponca City and partner in the following: Buttram - Bowker Development company, Ponca City; Major Development Company, Tulsa, and Diversified Properties Limited, Houston, Tex.

He owns and operates a 300-acre farm of small grains near Ponca City, is on the board of directors of the First National Bank and Trust company of Ponca City, and boards of the following companies and corporations: Pelton Electronics Manufacturing, Buttram Industries and North Park Development, all of Ponca City; Southland Motor Inn Corporation of Tulsa, Bois D'Arc Watershed association of Newkirk, and on the board of governors of Unity High school, Ponca City.

Married to the former Ardyth Grover, daughter of a Lenapah rancher, he attended schools in Ponca City, Red Rock, Perry, Fairfax and Lusk, Wyo., before taking his B.S. degree from Oklahoma State University in 1950.

The Buttrams have three children, Kathleen, 18, an honors freshman student at OSU; James, 17, Ponca City high school, and Chris Ann, 12, Ponca City elementary school.

He has also been active in Ponca City civic work, in OSU alumni work, and others. He served in the U.S. air force.

Evans, no stranger to Blackwell, is a partner in Evans and Throop Construction Company, Inc., of Ponca City and Stillwater. This firm has done Blackwell's paving projects, and a vast number of similar jobs in this area.

HAPPY 50TH Birthday—A plaque honoring Acme Foundry and Machine Co.'s 50th anniversary was presented to Lyle Fulton, foundry manager, by Kent Randall Thursday as well-wishers looked on. Fulton has been with the foundry for 49 years. He starts his 50th year Aug. 16. Randall made the presentation on behalf of the Chamber of Commerce, Blackwell Industrial Foundation, City of Blackwell, and Blackwell Industrial Authority. Shown with Randall, president of the Blackwell Industrial Foundation, are from left: Bill Rodgers Jr., chairman of the Blackwell Industrial Authority, Fulton, and Ken Nunn, president of the Chamber of Commerce. (J-T Photo)

ons Announced After Acme Foundry Reorgan

Colorado 1950-54. He was associated with Glen Paris and ons, Ponca City, for five ears and became an employe of Acme March 19, 1956.

He married Mary Kay Gram in 1956 and they have ree children, Ethan, 14, ary Virginia, 11, and Patrica ee, 7. He is a former presint of Little League Associaon, elder in Presbyterian urch, member Masonic lodge d a director in the Chamber Commerce and First Nanal Bank.

Goff was born in Bucklin, ans., and attended school ere before attending college Kansas State Teachers, Emria, and Kansas State. He as employed with Westingouse for three years in Newrk, N.J., three years in U.S. ir Force procurement divion, is a veteran of the air rce, and has been with Acme nce 1947.

He is a member of the Unitd Methodist church, Ameri-n Red Cross Chapter board, hamber of Commerce, Nanal Chamber of Commerce, nited Fund board and Blackell Country Club. His wife, velyn, is a teller at the Serity Bank and Trust compa-.

Graves became an Acme empyee April 1, 1946. He has rved as shipping clerk, in st accounting, all departent of the Foundry, in sales, sales manager and assistant ant superintendent.

He is a member of the Manic Lodge, American Legion, merican Foundrymen's Soety, board of directors Asciated Industries of Oklahoa, Plains State Chapter of the oundrymen's society. He is former member of the hamber of Commerce and untry Club's boards.

His wife is Marian and they ve two sons, Nick, an OSU shman, and Chris, a BHS

bo Mat Engineers in 1937 at the time Fulton was put charge of metals until 1940 when he was named Foundry superintendent, the position he has held since. He is a member of the Presbyterian church, the American Foundry Society the Plains State Foundrymen's society, and lives with wife Mary at 939 North Seventh.

Prior to joining Acme in 1959, Batten was state distributor for Piper Aircraft with headquarters in Ponca City. He came to Kay county from Fort Worth where he was the supervisor of subcontracts serving much of the B-36 program. At one time he was regional sales manager for Piper Aircraft company.

He is a graduate of Chaffy college in Ontario and Upland Calif., from where he joined the navy at the start of World War II. At the war's end he was commanding officer of a night carrier torpedo squadron and recently retired as a commander in the naval reserve.

Presently he is vice chairman of the Plains State chapter of the A.F.S. American Foundry Society, and is a member of the American Society for Metals. His wife is Betty.

McKern is a graduate of Blackwell high school and was studying mechanical engineering when called to service in the air force during World War II. While in the A.F. he was a machine shop instructor for four years at Kelly Field, Tex. After discharge he went to Great Bend, Kans. as assistant shop foreman in a large oil field shop. He joined Acme in 1948 doing heavy machine work and operating large lathes and the boring mill.

In Feb. 1952, he was named machine shop superintendent. He and his wife, Eva, currently are serving a five year term as state field directors of the Natioanl Campers and Hiker's association, in which they are instrumental in forming new chapters in Oklahoma. They attend the Presbyterian church.

Graham began operation of the foundry here in 1926 employing only 20 men. The foundry now employes about 200 and pays over $1.25 million in annual payroll.

Production has climbed from the meager beginning through a great depression, World War II and a devastating 1955 tornado which virtually destroyed the plant to 400 tons of castings each month.

Production was abruptly stopped by the violent storm of 1955. However, with the help of the employes, who rebuilt the plant themselves, iron was pouring again in 21 days.

Selling castings to over 150 manufactuers in 14 states and Canada, Acme deals mainly with the manufacture of diesel engine parts, of which Nickles Machine Corp. of Ponca City is a principal buyer.

They also manufacture pump components such as impellers and pedestals for such companies as Mission Pumps of Houston. The pumps are used on trucks for loading and unloading propane and butane, some are used in the refrigeration industry and brewing facilities also.

Valve bodies for Cessna Hydraulics are made at the foundry also. They are used in hydraulic systems on agricultural and industrial heavy equipment. Safety-Seal piston rings are also produced as rough castings at Acme.

"Most of our products go into the oil and gas distribution industry sooner or later," said Batten. "The company grew with the oil play in the state," he added.

High grade steel scrap, including rails, railroad car springs and some auto parts, is used to charge the furnaces at the foundry. Here it is melted and treated before it is poured into molds also made at the plant.

Patterns for the sand molds are made either by the pattern shop of Acme or by contract pattern makers.

Highly skilled employes of Acme follow blue prints supplied by the buyer to make full scale Philippine mahogany models of the future product, (actually slightly oversized to allow room for machining and finishing).

These patterns are then painted and used to make sand casting molds.

Metal patterns are also used but are more expensive to the buyer. However, they do last longer. Once used, the patterns are stored at the foundry for future use. They are heavily insured by their owners during storage.

Match - plate type patterns, two haves of a full size replica of the desired product, are sent to the foundry by purchasing companies to be mounted on a plank of metal about two feet square. This method is used to form the patterns for small parts.

These patterns too are used for making sand molds. The process is known as the cope and drag (top and bottom) method of casting products.

Sand used in the former process, with wooden patterns, is a mixture of sand, oil and a binder to hold the mold together. This mold is made by burying the pattern in sand and then removing it. This leaves a "hollow" in the sand the same shape and size as the pattern. The mold is then placed in a drying oven overnight and baked at 450 degrees.

After the drying process has been completed the mold is placed in a metal pouring jacket, to give it additional strength, and prepared for casting.

"Green sand" or "squeezer" castings are made using the cope and drag method with match-plate pattrens. The sand, a mixture of sand and coke, is not baked, but is forced around the pattern by a hydraulic press, hence the name "squeezer."

This pressing forms two halves of the mold, with additional pieces inserted to create passage ways for the molten iron, which are placed in a pouring jacket and then arranged on the squeezer floor for pouring.

There are two furnaces in Acme's foundry. One is an electric Ductile iron heater and the other a coke fired cupola furnace for Gray Iron.

Ductile iron, used in diesel engine parts, is heated to 2,485 F. degrees in the electric furnace before it is poured. The furnace is capable of holding 17,000 pounds of iron.

Portions of the furnace's contents are poured out during a pouring shift into a ladle supported on an I-beam trolley which can be rolled throughout the main bay of the pouring floor. From this ladle the iron is again poured into another containing small amounts of nickel-magnesium and silicon-magnesium.

This process alters the surface tension of the molten metal and produces a material with a tensile strength of 80,000 pounds. Ductile iron makes good castings with outstanding potential for machining, according to Gray Iron Association information.

Again the metal is poured into the original movable ladle and rolled to the pouring area to be used for casting cylinder heads, cylinders, pistons and piston rings.

Gray iron from the cupola furnace is used for the pump parts and valve bodies made by the company. The furnace is tapped for 1,000 pounds of metal every four minutes during a pouring shift.

Coke, a coal product, is used to fire the cupola furnace.

Four men sort scrap from the salvage yard near the foundry, weigh it and feed the furnace with it throughout the pouring shift.

They also feed the furnace fires with coke to maintain the heat source. It takes 130 pounds of coke for very 1,000 pounds of metal melted. The coke is burned directly with the scrap. This also contributes somewhat to the carbon content of the molten metal.

The iron is 2,800 degrees when tapped.

Small, 300 pound capacity, ladles are filled from a 1,400 pound capacity ladle, located under the cupola, and rolled to the squeezer floor. Here the iron is poured into the "green sand" molds which are lined along the

filled with
ers who f
pound la
pouring s
to cool
crew bre
away fr

this way.

Larger engine parts are allowed to cool for 48 hours before they are "unearthed." Even after this time they are still very hot.

From the pouring floor the new rough castings are sent to the cleaning department where all flashings and imperfections are either ground off or chiseled away with pneumatic chisels.

The castings are then sorted and boxed for shipping by rail, freight or air freight.

After receiving the castings the buyer must finish and machine the parts to final tolerances. However, because of the care taken in the pattern shop and pouring area of the foundry, the parts are very close to specifications when they leave the casting department.

Small parts, such as valve bodies which have many small passageways cast into their interior, must be inspected before shipment with a boroscope. his is a device which enables an inspector to see flashings and other imperfections within the part. If flashings are found they must b

Hospital Notes

Patients dismissed Saturday from Blackwell General hospital included:

Francis J. McBrain, 412 West Blackwell.

Mrs. Robert A. Smith, Route 1.

Donald Schneeberger, Ponca City.

Mrs. Floyd Harrington, Enid.

Mel Gene, 7, and Marlin D., 11, sons of Mr. and Mrs. arius Kahle, Kildare.

Howard L. Congram, 829 uth First.

Kyle Moreland, 1404 South nth.

Otis L. Irons, 719 East Linln.

Mrs. Albert H. Dannebohm, 2 East College.

Loy Freeman, 119 Enlow.

Brief News & Personals

Department's annual pinning ceremony May 6.

Symbols of the passage from student nurse to professional, Northern Oklahoma College nursing pins will be conferred on each graduate by Kathleen Taylor, director of nursing, at the 7:30 p.m. ceremony in Wilkin Auditorium.

A reception for graduates, their relatives and friends will follow in the Student Union.

Blackwell graduates receiving their nursing pins are Mailyn Henry, Jane Cargill, and Freida Nottingham.

Also receiving their pins are Deborah Bahm, Ponca City; Mary Lou Lauer, Tonkawa; Kathy Hendrix, Enid; Robin Brown, Edmond; Mary Eberhart, Ponca City; Linda Buffalohead, Ponca City; Carol Clickner, Douglas; Lula Gibson, Medford; Betty Bay, Ponca; Cathy Dent, Ponca; Linda Simmons, Ponca; Suzanne Holderby, Cherokee; Debra Rankin, Red Rock; and Roberta Barker, Ponca City.

Others to be pinned are Virginia Brewer, Ponca; Rebecca Glazebrook, Enid; Jacklyn Sells, Laverne; Kim Dickey, Bartlesville; Rubin Ray, Enid; Jacqueline Ross, Ponca; Carol Milliron, Morrison; John Boolen, Tonkawa; Bob Wilson, Wakita;

JUNIOR HIGH P.-T.O. SLATE—These new officers will serve Junior High P.-T.O. during the 1977-78 school year and will preside when the P.-T.O. meets again next fall. The president and vice-president will represent the unit at the Community Council meeting May 9. Seated, from left, are Mrs. Marion (Colette) Wright, president and Mrs. Bill (Angie) Coussens, vice-president. At back are Mrs. Terry (Carol) Wiens, secretary, at left and Mrs. A.D. (Gwen) Barnes, treasurer. The Junior High P.-T.O. was first organized last fall. (J-T Photo)

LUBBOCK, Tex. (UPI) —

Florida tomatoes enjoy a rebirth

By Gaynor Maddox

First Lady's tumor benign

By HELEN THOMAS
UPI White House Reporter

WASHINGTON (UPI) — First Lady Rosalynn Carter, feeling "fine" after surgery to remove a non-cancerous lump from her breast, plunged right back into a busy schedule today.

Mary Hoyt, Mrs. Carter's press secretary, said the First Lady had a Spanish lesson early today, then greeted a group of mentally retarded children touring the White House. She also planned to attend a National Symphony lecture and concert.

"She's fine," Mrs. Hoyt said.

Mrs. Carter went to Bethesda Naval Medical Center Thursday for a routine gynecological checkup she has every six months. When doctors found a lump in her breast, she underwent immediate surgery and the lump proved non-malignant.

Aides said Mrs. Carter, 49, was up and about the White House within three hours of the 40-minute operation. President Carter was informed of the discovery immediately and was told his wife was going into surgery.

Crotten de Chavigne, a small goat cheese from the Berri area of central France, is the most expensive cheese in the world.

FOOD FOR AMERICANS

CONVERSATION—Henry Buskuhl, whose association with Acme dates back many years in carpentry-construction, talks with Mrs. Lyle Fulton.

IN THE SHADE—Many sought the shade of the park's old bandstand as the evening wore on. Among them (l to r) were Charles Bonham (melt department), Arlie Bray (mold) and A. C. Pratt (supervisor melt). A total of 600 hamburgers and 250 hot dogs were served. Picnic details were handled by Fred Williamson and Bob Miller with help from Art DeCamp, Max Payne, John Hood, Jim Kincheloe, Shari Cox, Pat Wyckoff and other plant foremen.

DEAR READER — No, I don't recommend a do-it-yourself project. If you have real electrolysis and the operator — physician or otherwise — does it properly the hair follicles should be permanently destroyed. The whole principle of electrolysis is to introduce an electrical current of sufficient intensity long enough to destroy the hair follicle (root) of the hair. The trick is to do this just right without damaging the skin and causing scarring or unsightly blemishes that may persist. Some local reaction is not unusual and should be temporary.

The first treatment is not enough for any one area. Why? Because you can't see the smaller hairs or find the root of those that are resting or have had the shaft of hair removed by whatever means. As these sprout and are identified they can then be treated. A few treatments in a given area, though, should produce permanent results. If the area to be treated is large, then sections of it may have to be treated at different visits to complete the job.

[illegible] to the exact same area and it is electrolysis you are paying for, something is amiss.

If you still can't get a reasonable result see a different dermatologist and he may recommend a competent trained individual to do the electrolysis for you. Many trained operators for this procedure are not physicians at all and the cost might be less.

I do think that for most people the place to start with the excess hair problem is with a dermatologist from your area. He will define the cause of the problem and will know the reliable operators in your area who can do proper electrolysis.

Those who are interested in keeping the hair on their head and taking care of it can send 50 cents with a long, stamped, self-addressed envelope for The Health Letter number 12-2, Your Hair and Its Care. Address your request to Dr. Lamb in care of this newspaper, P.O. Box 326, San Antonio, TX 78292.

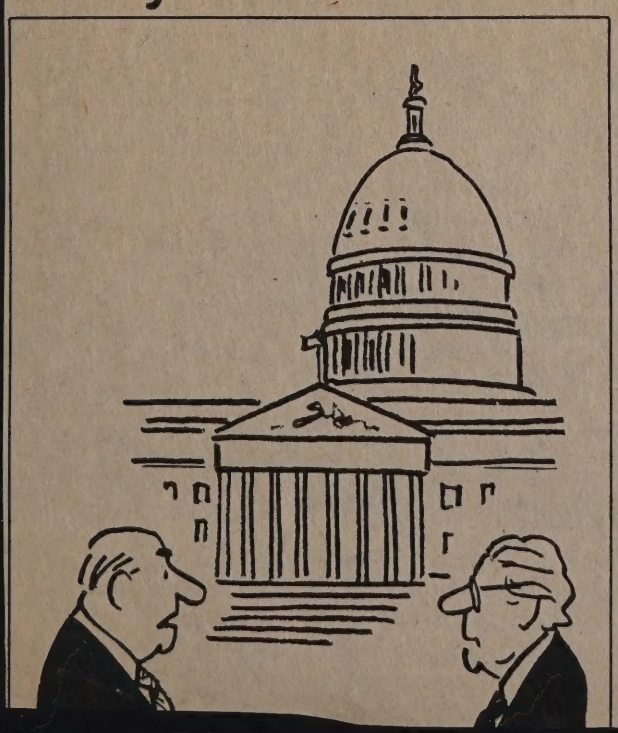
Thoughts

"Either make the tree good, and its fruit good; or make the tree bad, and its fruit bad; for the tree is known by its fruit."—Matthew 12:33.

Our deeds still travel with us from afar, and what we have makes us what we are.—George Eliot, English novelist.

Berry's World



Rural roundup

BY ERIC RUFF
J-T Washington Bureau

WASHINGTON—USDA is looking for farmland value to climb 6 to 8 percent this year. Since 1970 it has doubled, and in portions of the Midwest, it's tripled.

Agriculture officials estimate that from 1972 to 1976 capital gains possible on all U.S. famland were $339 billion. Income earned off that land was $144 billion though—less than half the capital gains.

Peanut farmers take note. USDA is asking for comments on proposals for the 1978 peanut program. Written comments should be sent to the Price Support and Loan Division, ASCS-USDA, P.O. Box 2415, Washington, D.C. 20013.

Experts are looking for U.S. farm exports to substantially exceed fiscal 1977's $24 billion mark.

Surpassing the fiscal '77 level will set a record, with larger exports of wheat, soybeans, oilseed products and cotton leading the way.

American consumers aren't

WITH THE GANG—General Manager Fred Allon and his wife, Catherine, joined the picnickers, their first time to share an all-family event since coming to town last October.

UNPOSED—Jerry White (left), Harrison Rowe and Renae Diaz unconsciously all stand with folded arms as they listen to the announcement of prize winners. Lucky Jerry won a radio and other gift recipients were Barbara Miller and Leslie Christenson, pump Thermos; Henry Pendergraft, ice chest; Floyd Ridgeway, camera; Virginia Holmes, electric ice cream freezer and Lark Thompson, Rummy Fun game.

CANDID SHOT—Salesman Jack Graves and Ralph Epperly (mold department) and his wife (l to r) take a minute out from the goins' on. Saturday's picnic was the second for Acme families, following a successful "first" last summer.

TAKING IT EASY—Grass and lawn chairs make comfortable seating for sideliners at the softball game. They are (l to r from top) Cleora and Tracy Tebow, Mrs. Bill Sprueill and Tammy, Virgia Holmes and Mrs. Frances Stout. Action at the picnic included horseshoe pitching, an afternoon baseball game, softball morning and evening, park play equipment for the kids and impromptu cooling tank ducking.

whole and in segments, on ...
across the nation.

The movie, which has a production budget of $65,000 to $75,000, will also be made available to state party organizations for showings at campaign gatherings or use on local TV where the party groups can afford time buys.

In addition, the RNC and GOP congressional campaign committees are preparing issue packets for distribution to Republican candidates and are exploring other proposals for spreading the word on taxes and their link with inflation.

Last fall, while Proposition 13 was no more than a speck on the California horizon, the GOP National Committee, the Republican Congressional Campaign Committee and the Republican Senatorial Campaign Committee thrashed out tentative plans for an even more ambitious 1978 blitz built around the tax issue.

At the time, however, Senate Minority Leader Howard H. Baker Jr. expressed doubts about the significance of the issue and the cost and effectiveness of an all-out joint crusade. As a consequence, the scheme was shelved. Some of those who favored the plan back then are now darkly muttering "I told you so" behind Baker's back.

Not all GOP strategists are convinced of the wisdom of national party leaders trying to set the tone of campaigns from Hawaii to Maine, whether the suggested focus is on taxes or some other issue.

"I'm leery of the party trying to dictate from Washington what the major issue should be in local campaigns," said Steven Stockmeyer, executive director of the GOP Congressional Campaign Committee.

"I think the big anti-crime push orchestrated by the Nixon-Agnew White House in 1970 backfired on us, and I'm skeptical of that kind of stuff. Still, I have a feeling this inflation-tax thing may just be something we can use successfully as a focal point nationwide."

None of the Republican strategists is ready to predict that the tax issue will be enough to produce huge GOP gains this fall, either in Congress or at the state level. The advantages of incumbency, which accrue primarily to Democrats since there are more of them in office, still constitute a formidable edge.

But for the first time, at least in recent years, Republicans feel they have found an issue that will permit them to take the offensive in the fall, to campaign for something instead of forever opposing Democratic programs.

(NEWSPAPER ENTERPRISE ASSN.)

will come by ... self, not others.

SCORPIO (Oct. 24-Nov. 22) Solutions can easily be found through discussing your problems with others today. However, you may later conveniently forget they came up with the answers.

SAGITTARIUS (Nov. 23-Dec. 21) You should show a profit today in business transactions conducted along practical lines. Speculative ventures won't be so rewarding.

CAPRICORN (Dec. 22-Jan. 19) Guard against trying to upstage others or doing anything that could be considered in poor taste. Adhere to proper decorum and today will be fortunate socially.

AQUARIUS (Jan. 20-Feb. 19) You're very capable of managing your affairs today, but what's good for you isn't necessarily good for others. Don't try to mastermind associates business.

PISCES (Feb. 20-March 20) Finding reasons to neglect your work today may momentarily give you time to have some fun, but the price you pay may not be worth it in the long run.

ARIES (March 21-April 19) I... you're making any purchases today, especially for the home durability and quality should take precedence over price and fads.

TAURUS (April 20-May 20) You may be receiving good news today that will require time to be fully appreciated. Don't let a negative person destroy your anticipation.

GEMINI (May 21-June 20) Conduct your more serious business matters early in the day

THE WINNER IS—It's all eyes on an unseen announcer as a group from the Acme family listens for the name of a winner of one of several gifts the firm offered during the company sponsored picnic last Saturday in Riverside Park.

t week's voting on Capitol Hill

Robert Byrd explained he and other pro-labor bill senators switched from their previous voting positions in order to salvage the bill somewhat and refer it to committee.

On two previous cloture votes Byrd and the antifilibuster forces mustered 58 votes—two shy of the needed 60 to end debate.

The bill now rests in the Senate Human Resources Committee where Republicans appear confident it will die a peaceful death when Congress adjourns this fall.

Generally the measure would make it easier for employes to unionize and win contracts and calls for stiff penalties against employers breaking labor laws.

Votes on other major issues follow.

ECONOMIC ASSISTANCE TO KOREA was cut off by the House last week in an effort to force the Korean government to send a top official here for questioning. The House is interested in what part Kim Dong Jo, the former ambassador to the United States, played in the Koreagate scandal currently under investigation here. The House voted 273-125 to cut $56 million out of the 1979 agriculture appropriations bill for Food for Peace sales credits to South Korea. A yes vote is a vote for cutting off the funds. Reps. Ted Risenhoover, Wes Watkins, Glenn English and Mickey Edwards voted yes, Reps. James Jones and Tom Steed voted no.

FUNDS FOR THE CONTROVERSIAL NEUTRON BOMB were left in the public works appropriations measure approved by the House. An amendment by Rep. Theodore Weiss, D-N.Y., provided that "none of the funds. . .shall be available for the production of enhanced radiation weapons." In opposition to the amendment Rep. Ted Risenhoover, D-Okla., warned "The only way we are ever going to maintain peace in the world is be strong enough so that the Communists will not attack us or any other part of the world." A yes vote is for prohibiting funds for the neutron weapon. All the delegation voted no except Steed who did not vote.

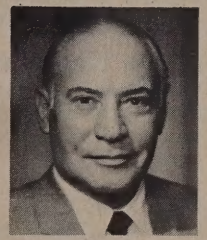
A TWO PERCENT REDUCTION IN THE INTERIOR DEPARTMENT budget was defeated by a narrow margin. The House voted 211-198 against cutting the $12.7 billion appropriation for the Interior Department. Rep. Clarence Miller, R-Ohio, offered the amendment which would have cut approximately $254 million. Rep. Sidney Yates, -Ill., opposed Miller's amendment because he said it would allow the administration to make the cuts and we would be "surrendering our responsibility," Yates said. A no vote is against cutting the budget. Jones, Watkins, English and Edwards voted yes, Risenhoover and Steed did not vote.

A $12.7-BILLION APPROPRIATION WAS approved by the House after an angry congressman was consoled. Rep. Robin Beard, R-Tenn., angered by the Supreme Court decision which prevented construction of the Tellico dam in his state, intended to offer some 682 amendments to the bill. He was convinced not to take the action when the Senate leadership promised he would have an opportunity to have the Tellico project reinstates later this vear. The funds were approved in the House, 356-50. A yes vote is for the $12.7 billion appropriation. Jones, Watkins and Edwards vote no, Risenhoover, Steed and English voted yes.

O-T [illegible] and editorials

AN APPRECIATION award was presented to Acme Foundry President Jack Graves by Jack Clinkingbeard, president of Local Union 149, Tuesday as foundry employes look on. The certificate was in appreciation for 50 years of employment for families of Local Union 149 (AFL-CIO). Clinkingbeard said it's the union's belief "that Acme Foundry and Local 149 can set a good example for harmony for all companies and unions in the United States." (J-T Photo)

Obituary



(1971 photo)

Harry H. Kessler, 85, died June 10 after suffering a massive heart attack. He was chairman and chief executive officer, Meehanite Metal Corp., Chattanooga, parent of 15 companies, including foundries in California, Tennessee, Delaware, Iowa, and Missouri, as well as Casting Materials Co., Chattanooga. Meehanite itself is a consulting firm with more than 300 licensees in 37 countries.

A 1924 graduate of the University of Missouri at Rolla with a B.S. degree in metallurgical engineering, he subsequently was awarded a degree as a metallurgical engineer in 1959 and a doctor of engineering degree in 1967. He entered the foundry industry while in college, with American Steel Foundries, 1921-25. Later associations included American Manganese Steel Co. and Banner Iron Works, St. Louis. He left Banner to become manager and a partner of Sorbo-Mat Process Engineers.

His activities expanded to include many business and professional affiliations, including Meehanite. Among his many honors was the John H. Whiting Medal of AFS in 1971 "for a lifetime of contributions to the technology of the production of iron castings and dissemination of such technology to insure that castings be recognized as a superior engineered product."

His career in the foundry industry was paralleled for many years by activities in the field of professional boxing that made him internationally famous. An amateur boxer as a youth, he refereed more than 5,000 matches between 1927 and the mid-'70s, including more than a dozen world title bouts. In 1971, he was the first non-boxer to be elected to the Boxing Hall of Fame and on the sports pages commonly was known as the "Millionaire Referee" and the "Millionaire Metallurgist." His biography, which appeared several years ago, was called *The Millionaire Referee.*

8-15-28 went to work for A.F. Foundry employed 9 at that time. Helper in Core room Spring '29 apprenticeship in molding until 37 when put in charge of metal. June 1 '41 became Fdy Supt until Oct 17'77 when Fred Allen was placed in that position. Foundry poured approx 7000# daily at time of starting = Acme to appx. 65,000# gray iron + 17,000# ductile daily now. Lyle grew up & the Foundry. Completed 50 years Aug. 15th. Seen it thru big fire in 45 + 55 big tornado but both survived

Mon

Dear Kids:

Hope you had a successful trip Barb + all well. Paul looked ghastly! Do hope he gets rested + recouped.

Lyle had a very exciting week. We had a reporter 3 hrs. Mon p.m. The mayor proclaimed Wed. as "Lyle Fulton Day" + it was on KLTR for 2 days handy. The bank even ran "Happy 50th Anniv. Lyle Fulton" on its running message, time + temp marquee thingie.

There were 2 parties at foundry; nice pic + write up in local paper, P.C. News + Oh. City Times Wed.

Dee sent a telegram, we had calls, notes, cards, letters, plant, flowers, gift certificates etc.

Paul finally decided to relax + enjoy it. He is deserving of it all.

We called Thumps + Ruth Tripps. They said Gene + Effie wants them to meet here mid Sept. We haven't heard from them.

Gotta go. Love,

Dad + Mickey

Lyle Fulton grows with Acme

BY HELEN SEUBERT
(J-T Staff Writer)

"I guess I've got sand in my blood," Foundryman Lyle Fulton said Monday night.

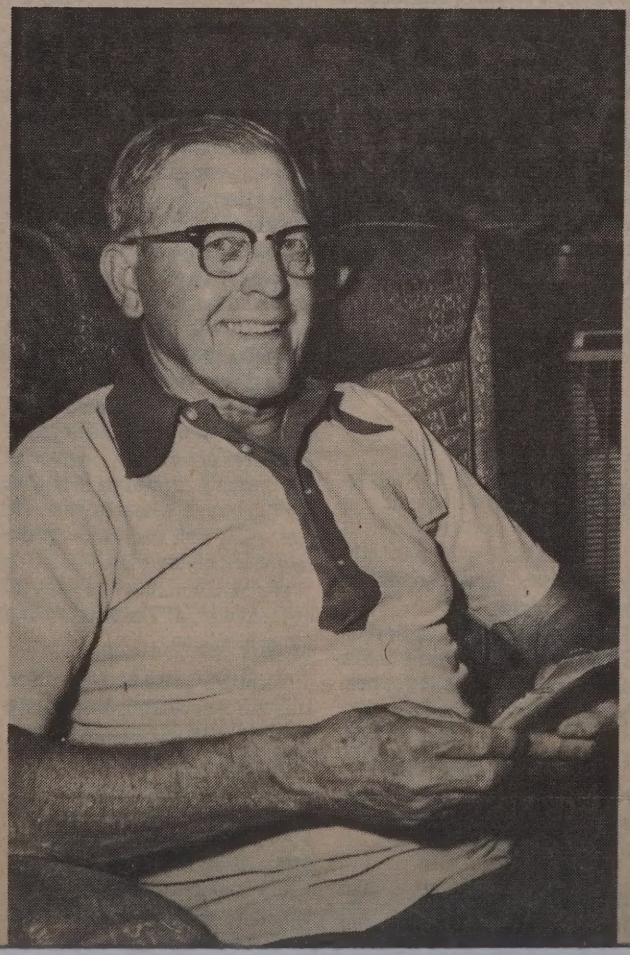
He made the statement with pride because today, Aug. 15, marks his 50th anniversary with Acme Foundry and Machine Co., Inc., in Blackwell, producers of gray and ductile iron.

It's a far cry from Aug. 15, 1928, when a young Nebraska farm youth, his dad and brother signed on with a foundry which had been in operation a scant two years.

How the three came to be in Blackwell bears on Lyle Fulton's determination to put down roots and his subsequent progress from core room apprentice to foundry superintendent for 48 years.

Blackwell Mayor Garry Whitman has proclaimed Aug. 16, 1978 as Lyle K. Fulton Day in Blackwell. Lyle Fulton, foundry superintendent with Acme Foundry, marks his 50th year with the company today.

The mayor issued the proclamation on Monday.



Nineteen-year-old Lyle Fulton applied himself to his apparenticeship with a diligence that hasn't lessened in 50 years.

Apprenticeships in the core room and mold department moved him into the journeyman's spot, a four-year procedure in the old days. Until 1936, he worked as a molder in the foundry.

"I worked hard and Ethan Graham appreciated that," Fulton said.

In late 1936, he was put in charge of melting and pour-off a job he held until June 1, 1940, being appointed foundry superintendent on that date.

By that time there were 36 employees in the foundry department and the tough times of the depression were fading away, only to put Acme to another test—World War II.

Fulton's days were long starting at 4 a.m. and lasting until 7 p.m. After a meal and bath, he would return to the plant to make certain the night crew was operating.

"I was 3-A and the boss went to plead with the draft board about three times a week to convince them I was needed could get, even putting German prisoners of war from the Tonkawa camp to work for five months one year. They brought rough loaves of bread and herring to eat for lunch. Graham felt they couldn't work on that kind of fare and fed them two meals a day," Fulton said.

"We didn't hire women but we did have men working a shift for us and another for the zinc smelter," he added of the manpower shortages.

Acme suffered a different kind of blow in 1945 when the machine shop and offices burned to the ground. Work continued in a makeshift location at the National Guard Armory.

Ten years later, the giant tornado which hit Blackwell's east side leveled Acme's machine shop and, again, work continued in a temporary location, Sixth and Furguson, while one was rebuilt.

Fulton lost another crew in August, 1946, the men leaving to work in Tacoma, WA, with Earl Heckman, Graham's former partner.

But Acme weathered

Fulton

Continued from Page 1

with long records of employment but the Golden 50 belongs to Fulton.

He likes to think the 48 years and two months he worked without loss of time is a credit to his dedication to Acme. Crushed vertibrae, inflicted when he tried to carry a casting, accounted for his short absence from the plant.

He recalls in his early days at the foundry, there were three electric light bulbs, turned on only on cloudy days. Each man had a small mirror to reflect light so he could see into the molds. Bellows were used for air.

Despite modern improvements, foundry work is dependent on each man's personal ability and team spirit.

According to Fulton, the foundry's largest casting weighed 5,200 pounds and the smallest not over two ounces.

The plant's molds and castings go into valve castings, pressure pumps, cylinders, hydraulic valve bodies, centrifugal pumps and other needs dictated by customers from the atomic field, tool firms, pipelines, gathering stations, refineries, the oil industry and rolling machinery.

Fulton's wife of 17 years, Mary, says of her husband: "He's a foundryman through and through. He'd rather pour iron than eat."

Fulton Still Feels Young After 50 Years at Foundry

Ponca City News 8-16-78

Lyle K. Fulton, an employee of Acme Foundry in Blackwell since Aug. 15, 1928, was honored today with a celebration commerating his 50 years of employment with the company.

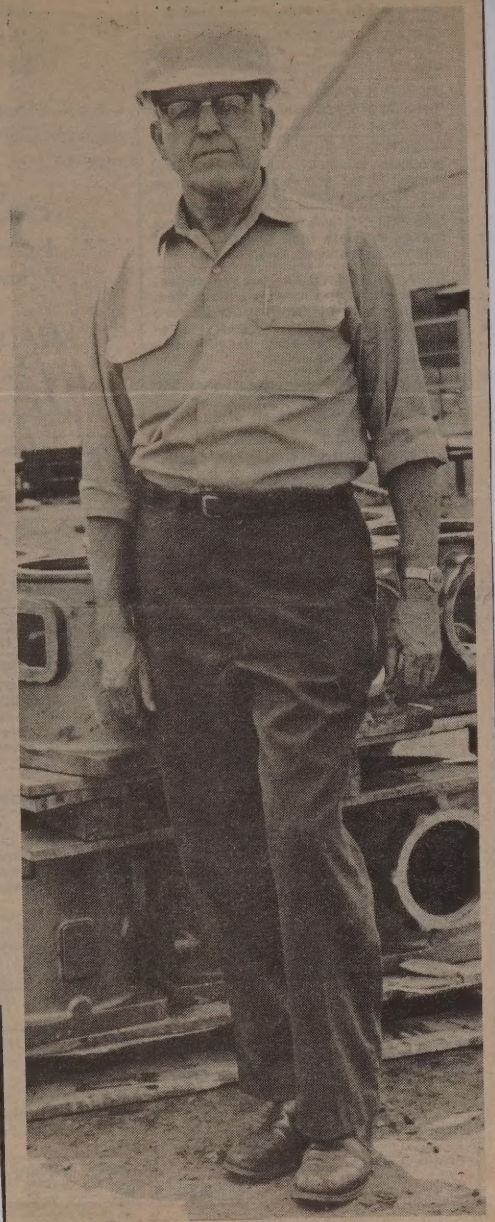
Blackwell Mayor Garry Whitman also proclaimed today as Lyle Fulton Day throughout the city.

Fulton, a youthful 69, was named foundry superintendent in June, 1941. When Fulton, his father and brother were hired in 1928, the foundry had only six other employees. It currently employs over 200.

The foundry veteran, who looks as though he could work another 50 years, has no plans for retirement. How does one feel after working in a business for that long? "I love it. I just love it," Fulton said.

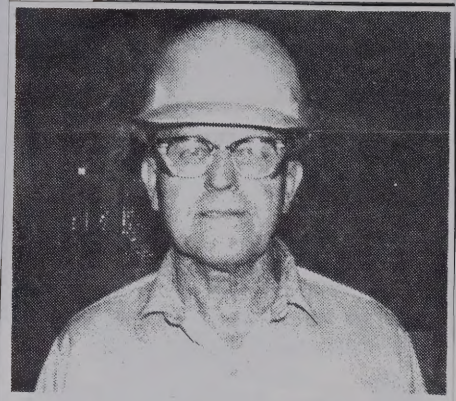
Acme Foundry is currently owned by Jerry Evans, James Buttram, Roger Goff and Dick Batten. "Fulton is quite an amazing and interesting person," Evans commented. He acts young, thinks young and is in incredible condition.

Fulton and his wife Mary have eight grandchildren and one great-grandson, age 10 months. Their son Jack resides in Bartlesville and their daughter, Deanna Sue Barnes, in Millington, Tenn. Fulton also has three stepchildren, Murray Hines, Ft. Worth; Pat Hines, El Dorado, Ark.; and Judy Hall, Las Cruces, N.M.



Lyle K. Fulton

ACME TODAY



Happy 50th Anniversary Lyle

August, 1978

HAPPY 50th ANNIVERSARY

It isn't often that you know a person who has begun a career at age 19 with a given company, and is still at that same career with that same company 50 years later. Lyle Fulton began working for Ethan Graham at Acme Foundry on August 16, 1928. He has done nearly every job in the foundry at one time or another, and has accumulated a vast knowledge of metal casting over the years. Lyle's energy is hard to match, and if you're going to walk along side of him, plan to hurry. Lyle began as a laborer, and grew to foundry superintendent, in 1941.

Lyle is a part of the foundry and has worked closely with many other foundrymen at Acme for many years, so we decided to celebrate his anniversary with all of Acme's employees, by serving donuts and coffee throughout the day, Wednesday in our lunchroom and serving cake in the office for other personnel.

A story has appeared in the Oklahoma City Times, Ponca City News, and Blackwell Journal Tribune about Lyle's career. Blackwell's Mayor Garry Whitman proclaimed August 16th, 1978 Lyle K. Fulton Day in Blackwell.

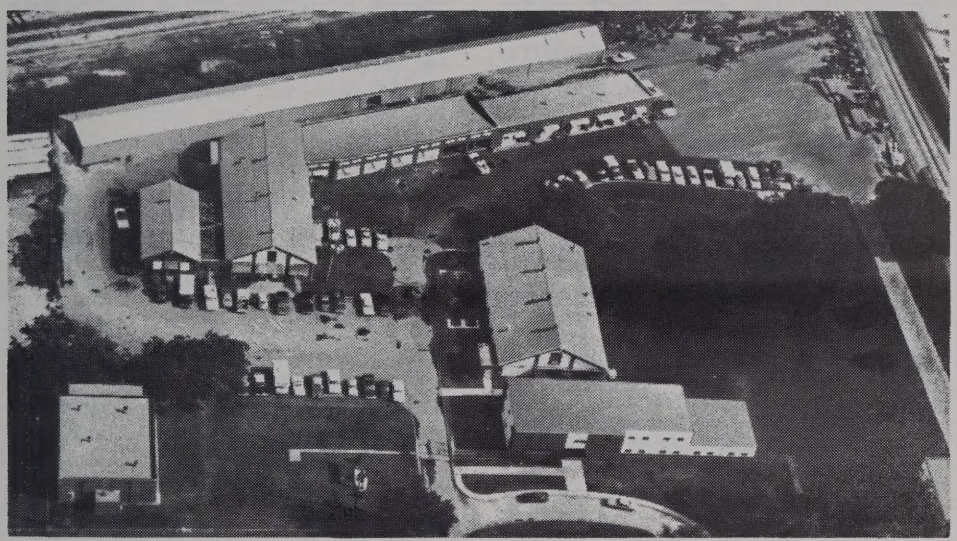
ACME TODAY | Blackwell, Oklahoma | August, 1978

Arrow Specialty Company

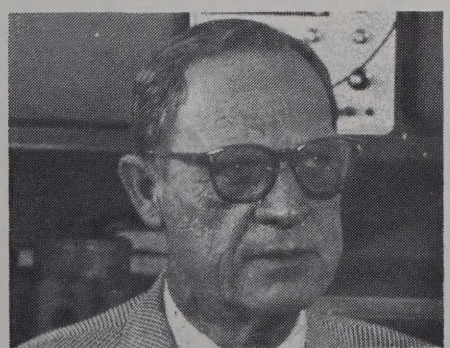


ARROW SPECIALTY COMPANY, OF TULSA, OKLAHOMA

This month we're featuring Arrow Specialty Company, of Tulsa. Jeff Davis founded Arrow in 1955 specifically for the manufacturing of replacement parts for the major pumping engine lines. As Arrow's reputation grew as a quality part supplier, the company also grew from a 275 sq. ft. facility to approximately 65,000 sq. ft. under roof on a six acre tract for manufacturing and parts storage. The number of employees grew from three, in the beginning to over 100 people at this time.

As Tom Davis, President-General Manager, states it, Arrow is probably the only engine builder that started manufacturing replacement parts before building the engine. The market for these engines looks excellent, and he feels that they are coming onstream at the right time to fill a real need for this type of horsepower.

The time tested classic single cylinder, slow speed, large flywheel engines are more popular than ever today. The oil patch of today realizes that the old proven design has taken on new life with updated accessories such as full-flow oil filters and improved solid-state ignition systems for greater efficiency. The reason for this resurgence in popularity is the inherent ruggedness and the mechanical simplicity.



JEFF DAVIS founder of Arrow Specialty Company in 1955.

In 1974, Arrow Specialty Company purchased the Continental Emsco line of engines, which were previously manufactured in the Waukesha Climax Plant in Clinton, Iowa. Arrow has, for a number of years, produced quality parts for these engines which were built in power ranges of 10, 14, 20 and 32 HP. These engines are designated C-46, C-66, C-96, and C-106 in order of power rating. Arrow is presently in production on C-66, C-96 and C-106 and is planning to produce the C-46 at a later date. The company indicated that it could produce a 65 HP unit if required.

These engines were specially designed for oil well pumping service, which normally requires continuous operation with a minimum of maintenance. To meet oil field requirements, the engines operate at low speeds, which lessens the wear of engine parts as well as wear of driven pumping equipment.

The engine may be started by hand with a crank or with optional portable 12 volt dc electric starter manufactured by Arrow, or with a permanently

SAFETY

SAFETY is a subject that can't be emphasized too strongly. We, all too often, take our safety for granted. We tell ourselves that those things won't happen to us, that we're careful. Statistics tell us that some of us are making mistakes. Accidents don't just happen, and they're not the result of "bad luck". Where safety is concerned, we make our own luck. Accidents are caused by one or several persons. Often enough, the person who is injured isn't the one who caused the accident. This point should make us more aware of our surroundings, our safety equipment, our actions.

Suppose we consider the following illustration. A man is working at a job in which there is a danger of flying particles. A small speck of material gets in his eye because he isn't wearing eye protection. The incident is considered of no inportance because it doesn't bother him immediately. That night at home, pain develops in his eye, and he tries to remove the particle himself. As a result, the eye becomes infected, and medical attention is necessary. Eye protection deffinitely has its place in a foundry. EVERYPLACE IN A FOUNDRY.

Since the first of June of this year, we have had 44 accidents. Six of these were cuts, thirteen have been related to pulled muscles or bruises, three burns, a paint inhalation, one related to heat, and twenty eye injuries. Can you honestly say that you won't be on the accident list next month?

Employees are issued safety equipment at no charge to them. Wearing the equipment is everyone's individual responsibility. We must realize that these safety rules are established for a reason. After we've given the subject adequate thought, perhaps we can all cooperate to reduce the number of accidents we're having.

Do's & Don'ts For Safe Lifting Below the Hook.

1. DO give safety first consideration in all Materials Handling. Follow OSHA standards at all times.
2. DON'T lift a piece without knowing its weight.
3. DON'T make a lift without knowing the capacity of lifting equipment in the method it is to be used.
4. DO familiarize yourself with types of slings available for easiest and safest lifting, and DON'T try to make one type of equipment do everything.
5. DO have lifting equipment inspected by competent inspectors regularly according to OSHA standards.
6. DON'T hesitate to use specialized outside services for inspections and for training of your personnel.
7. DO impress all personnel of the importance of cooperating with trained inspectors.
8. DON'T take maintenance inspection for granted. Inspect lifting equipment before and recommended after it's used to make certain it is in good condition.
9. DON'T leave lifting equipment that appears to be unsafe where someone else can use it. Remove damaged lifting equipment so it can't be used to make another lift.
10. DON'T use lifting equipment that is damaged to lift loads of lower capacity than the original rated capacity of the equipment. Without complete testing the strength of the equipment is unknown.
11. DON'T leave overloaded lifting equipment in a place where it can be used by someone else. The equipment may fail on the next lift even though the load may be lighter.
12. DO report any lifting equipment that appears to be unsafe.
13. DO report all accidents causing damage to lifting equipment, operating equipment and products.
14. DO report any accidental overloading of a piece of lifting equipment.
15. DON'T leave it to someone else to report all accidents to personnel no matter how minor they are.
16. DO store lifting equipment in proper racks and places so they do not become damaged by bending, cutting or crushing on the floor or on the equipment.
17. DO have crane hook in proper position over the load to keep from overstressing the lifting equipment, and to avoid sliding the load at lift-off. Check crane cables to see if they are perpendicular to the floor when you have a little tension on the crane.
18. DON'T subject lifting gear to unnecessary shock loads. Make lift gradually until slack is completely out of lifting gear.
19. DO consider that it is possible to more than double your load on a piece of lifting equipment because of shock loading.
20. DON'T lift beyond the working load limit of equipment. The safety design factors of lifting equipment gradually diminish over the life of the equipment due to normal wear.
21. DO make certain load can be lifted in secure, stable position.
22. DON'T feel that hitches and attachments will stay just where you put them when slack is being removed before full tension is applied to lifting equipment.
23. DO remove all loose pieces such as pipe, wood blocks, lifting gear from the load before it is moved.
24. DO make certain load is high enough to clear everything in its path, but never lift a load any higher than is necessary in order to move the load safely.
25. DON'T ever lift or move a load over the heads of personnel. Signal and clear the way in the path of a traveling load.
26. DO make certain you are clear of a moving load.
27. DON'T ride on a crane hook, lifting equipment or load.
28. DO remove any lifting equipment from the crane before any welding on the load, so the crane will not be utilized as a ground and be damaged.
29. DON'T expect crane operator to lift or move loads without the proper signals from only one authorized floorman.
30. DO have crane operator refuse to move a load if he is not satisfied with the way the lifting equipment is attached.
31. DON'T leave a load in the air unattended.

PROPER USE OF CHAIN SLINGS

1. DO make certain chain legs hang straight with no twists.
2. DO have the proper length sling for the job. Use adjustable leg slings for shortening or lengthening the legs of a sling. Knots or twists used to shorten a sling leg can cause dangerous wear patterns and stresses to develop in the links.
3. DON'T use any wire, nuts, bolts or repair links to repair chain slings. All repairs must be done by qualified personnel after a complete inspection using approved alloy chain connectors or by rebuilding at authorized chain repair facilities.
4. DO use chain slings where you may possibly encounter a great deal of abrasion.
5. DON'T use chain slings where you need to protect the load from gouging, scratching or nicking.

Proper Use of Fittings-Hooks, Shackles, Turnbuckles, Eye Bolts, Swiveling Hoist Rings

1. DO check fittings for cracks, nicks, bending and excessive wear.

HOOKS

2. DON'T use a hook that appears to have been bent, twisted or spread open. These conditions should be reported to the proper authority.
3. DO use safety hooks and safety latches wherever possible.
4. DON'T use any hook that has been welded or burned in any way. Unseen cracks or stress concentration points may have developed, greatly weakening the hook. Report conditions immediately.

SHACKLES

5. DON'T use any screw pin shackle where the pin is very difficult to turn. The pin is either bent due to overload or the threads have been damaged.
6. DON'T use any shackle that has a nut and bolt or pin of smaller diameter than the holes in the bail.
7. DO use safety shackles wherever possible. The pin must go completely through the shackle before the nut can be attached.
8. DO use the largest bearing surface possible on the shackle pin. This will reduce the bending moment on the pin.

TURNBUCKLES

9. DON'T ever use a turnbuckle in such a position where bending moment can be exerted. The rated capacity is figured on a straight pull.
10. DON'T use a turnbuckle that is hard to turn. The threads may have been damaged or the turnbuckle may be bent.
11. DON'T use a turnbuckle with loose worn threads. Capacity is lost due to reduction of the thread bearing area.

EYE BOLTS & SWIVELING HOIST RINGS

12. DO use shoulder eye bolts screwed in tightly against the face of the load.

(Continued on page 4)

EYE BOLTS & SWIVELING HOIST RINGS

(Continued from Page 3)

13. DON'T use standard eye bolts, other than on single part vertical lifts.

14. DON'T have the eye bolt eye out of parallel with the line of the pull of the sling. You will greatly increase the moment force on the eye bolt and decrease its safe working load.

15. DON'T assume that the rated capacity of an eye bolt in a vertical pull will be the same when the pull is at an angle to the shank of the eye bolt. The rated capacity is greatly reduced.

16. DO use a Swiveling Eye Bolt on all angular loading to get the maximum load capacities.

17. DO use a Swiveling Eye Bolt as an attachment when turning a load.

18. DON'T make a turn with swiveling hoist rings unless the body can swing freely through the turn.

19. DON'T put washers between the swiveling hoist ring and the load surface as this will decrease the rings capacity.

BACKLOG

In December of 1977 we started putting a drive in sales to improve our backlog situation. We were short of work in squeezers, SPO & Milwaukee, but had an increasing backlog in the Main Bay area. Jack Graves was instrumental in finding work for us in the Tulsa area, particularly one customer who is being featured in Acme Today. In fact, the seeds that Jack sowed are still being reaped today. We have under construction, patterns that first saw the gleam of light of day in the early months of this year, when we made up quotes and proposals that take time to consider, order, get patterns, sample and prepare for running. We have been able to get back to seven squeezer molders, but through a attrition in our molders we have been unable to keep the two units without overhead sand manned, but this is not due to lack of work.

We have also been active in the Texas area and up to Dick Batten's recent illness, we were getting regular coverage of our major customers, besides doing some prospecting of other accounts.

In May of this year Bob Fenton joined Acme and took over representation of the customers and prospects recently covered by Dick and this has allowed Dick to concentrate his efforts to implement sales coordination plan and a program for sales and production to be able to follow up on all customers new patterns and samples that are in process at all times. This will be a great help to both our sales personnel and the customer.

We have made very healthy pickup of our backlog with new work and new customers and when we improve our productivity with overhead sand, and a new furnace, we will have little difficulty in getting work to keep them busy.

We have 10 new customers today that we did not have in January, 1978, and we have many patterns from our old customers which have come to us due to the efforts of our sales team.

It takes a continuing effort to keep the foundry operative at full capacity and to keep your jobs going. Our thanks to our sales team for their efforts and hope they continue as actively.

Because of our increasing backlog on the main bay, we decided to do our next modernizing in this area, and we got the overhead sand project completed without stopping any of the operation.

While we have to iron out some bugs in working with the overhead sand units we all agree it's a better set up taking some of the heavy labor out. We have quickly found out that when we cleaned the sand from the main bay floor, we have a storage problem and we have filled our usual shell mold pouring area with the overflow.

Our next step must be to create some sand storage area. To this end, we have placed an order for a 200 T storage tank with a vibratory feeder to make the sand flow out an elevator to fill the tank, and a shakeout unit with a screen and magnetic pulley to screen out the lumps and magnetic particles. This will enable us to put our sand off the floor and the next obvious step is to install the muller capable of mulling sand as rapidly as we need it. We have the muller, a Simpson multi mull capable of 64 tons of sand mixing per hour. To install this we must move the existing muller. This must be done without interruption of the work we are doing, so the old mixer must be moved and back in operation over a weekend.

We have chosen the area of the Milwaukee machines to put the old muller and we are going to take out the old squeezer machine and install the Milwaukees on the southwest side of the new squeezer line.

We have picked Sept. 2nd as the weekend to move the muller and we will have Labor Day Sept. 4th to finish it up.

Our Maintenance crew will be working to complete this phase in the next few weeks.

Our sustained efforts in the foundry will be necessary to pay for these improvements to our facilities and to our work opportunities and equipment.

Modernization of this type is expensive, but essential if we are to continue supplying Quality castings to our customers.

Fred Allon

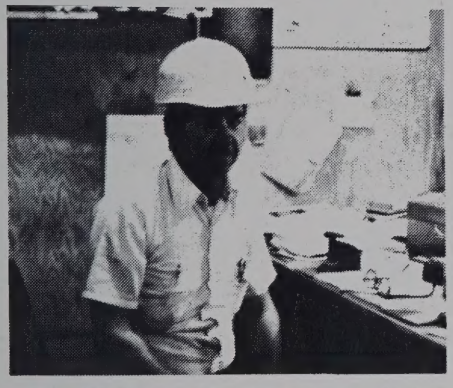
done. After setting a priority on each one, he gets one of his men to eliminate the problem according to the job requirements and the person's capability.

It is an aggravating job to be in the maintenance section, where most jobs must be done immediately.

Hardly a day goes by for the maintenance personnel that they aren't busy for their entire shift, doing the required tasks, plus the extra things needed in installation of new equipment, and subsequent building reconstruction. Our maintenance crew is one of the very best, in that there has not been a task



Don Stafford, foreman of our Maintenance Department.

placed upon them that has not been accomplished to the satisfaction of those concerned.

It all boils down to this: the clock is what the maintenance crew is in competition with when every task is needed today.

It is important for every employee to aid us by recognizing problems creeping up before they become serious. Preventive maintenance is easier and less time consuming to perform than is breakdown maintenance.

All of us in maintenance section are trying hard to please everyone and to keep the equipment and foundry area going in the best of fashion. However, nine people can only do so much in an eight-hour (with overtime) day to keep everything running smoothly.

Everett Stebbins & Alan Taylor of our Maintenance Department.

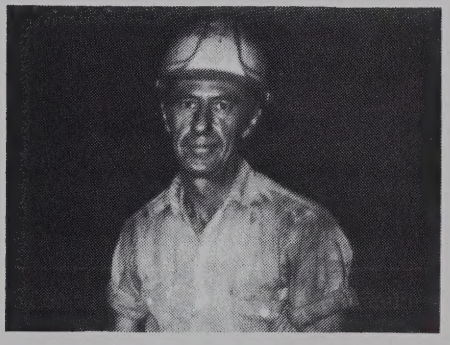
So, I'm asking everyone to help us, and we'll help you to the very best of all our abilities.

The maintenance department consists of Don Stafford, Ed Koch, Everett Stebbins, Oren Peres, Ned Sweetser, Steve Horinek, Alan Taylor, Paul Burris, and Richard Ware. We think they're doing a very fine job, and appreciate their ready cooperation in all matters. We really couldn't operate without them.

NEW FORKLIFT

A new Forklift arrived August 9, 1978 from Boecking Machinery, Inc. It's nice to get new equipment - let's take care of it.

YOUR FELLOW WORKERS

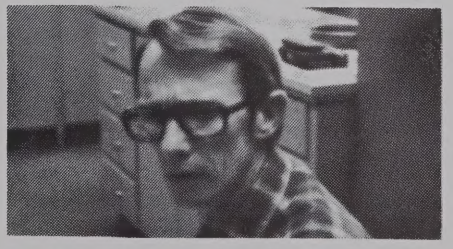


JACK MILLER, of the Mold Dept., has been with Acme since 1947.

VELLA WHITE, of Shell Core, with Acme since 1973.

HENRY PENDERGRAFT, of the No-Bake Department in the oil sand core room, has been with Acme since 1949.

JONNIE THOMPSON of Pour off has been with us for 4 years.



JIM KINCHELOE, Quality Control Manager, has worked at Acme for 18 years.

GLENN McCLEARY has worked at Acme since 1973, and is in the Pour Off Department.

CONGRATULATIONS

Stan Reimer got an award for Best Achievement at his Dale Carnegie class recently. Congratulations Stan!

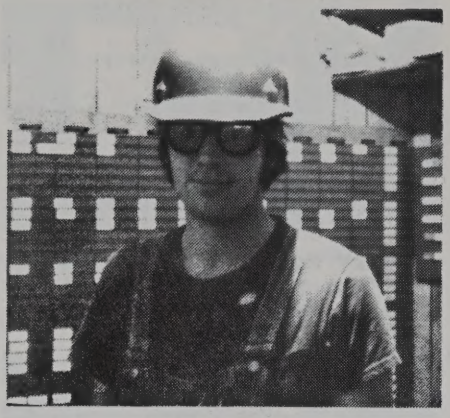
Bob Miller and Bill Curtis are also recent graduates of the same course.

LABOR DAY

LABOR DAY-is the 1st Monday in September, September 4th, and is observed as a legal holiday in recognition of the workingman.

Sign on a church bulletin board: "If God seems far away - who moved?"

NEW FOREMAN



JOHN BROWN

We wish to welcome a newcomer to Acme. John Brown is the new foreman of the Shell Core 2nd shift, and comes to us from Hutchinson, Kansas. John's wife, Karen, and their three children, will be joining him in Blackwell soon. John is quite an artist. We're using some of his work in this edition, as well as that of John Hood, Shell Core 1st shift foreman. Somehow, a lot of talent landed in the Shell Core department.

VACATIONS

During the vacation season this summer Acme employees were spread all over North America in their travels. Here are a few highlights of those trips. Mr. and Mrs. Eddie Duggins travelled through Canada, spent a few days at Lake Louise, drove down the coast through Washington and Oregon, and to Los Angeles. They put over 7,000 miles on the speedometer.

Glenn McCleary went to Texas, visited Old Mexico, and fished for red snapper on the Gulf.

Ronald and Virgie Holmes visited friends in San Fransisco, then went to Tahoe for some recreation. They say they had a blast.

Tina Gates, in the accounts receivable department in the main office, spent a rainy vacation in Florida.

Elmer and Lois Beck went to Nashville to see the Grand Ole Opry.

Robert Guy visited the beautiful state of Missouri.

This reporter went to California; Los Angeles. San Diego. But the highlight of the trip was San Francisco.

This country has some beautiful spots. One could travel every summer, and see something new each time. But Blackwell looks pretty good after 4,500 miles.

And then there is Mike Daly, Bill Plunk, Kenneth Stiles, Steve Wood, & Mike Richmond who all spent their vacation sightseeing in the country with our Oklahoma National Guard.

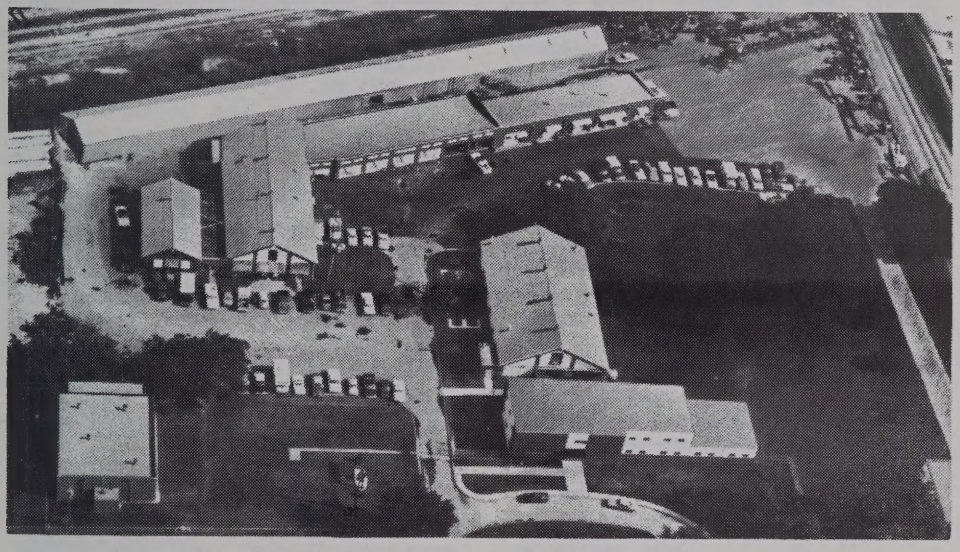
ACME TODAY

ACME TODAY | Blackwell, Oklahoma | August, 1978

Arrow Specialty Company

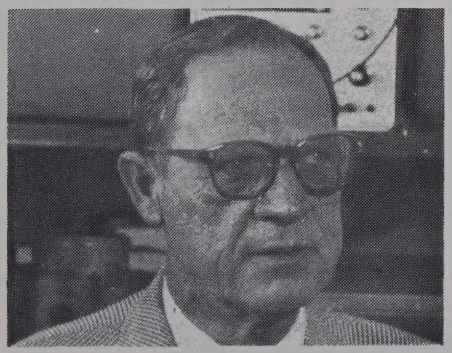


ARROW SPECIALTY COMPANY, OF TULSA, OKLAHOMA

This month we're featuring Arrow Specialty Company, of Tulsa. Jeff Davis founded Arrow in 1955 specifically for the manufacturing of replacement parts for the major pumping engine lines. As Arrow's reputation grew as a quality part supplier, the company also grew from a 275 sq. ft. facility to approximately 65,000 sq. ft. under roof on a six acre tract for manufacturing and parts storage. The number of employees grew from three, in the beginning to over 100 people at this time.

As Tom Davis, President-General Manager, states it, Arrow is probably the only engine builder that started manufacturing replacement parts before building the engine. The market for these engines looks excellent, and he feels that they are coming onstream at the right time to fill a real need for this type of horsepower.

The time tested classic single cylinder, slow speed, large flywheel engines are more popular than ever today. The oil patch of today realizes that the old proven design has taken on new life with updated accessories such as full-flow oil filters and improved solid-state ignition systems for greater efficiency. The reason for this resurgence in popularity is the inherent ruggedness and the mechanical simplicity.



JEFF DAVIS founder of Arrow Specialty Company in 1955.

In 1974, Arrow Specialty Company purchased the Continental Emsco line of engines, which were previously manufactured in the Waukesha Climax Plant in Clinton, Iowa. Arrow has, for a number of years, produced quality parts for these engines which were built in power ranges of 10, 14, 20 and 32 HP. These engines are designated C-46, C-66, C-96, and C-106 in order of power rating. Arrow is presently in production on C-66, C-96 and C-106 and is planning to produce the C-46 at a later date. The company indicated that it could produce a 65 HP unit if required.

These engines were specially designed for oil well pumping service, which normally requires continuous operation with a minimum of maintenance. To meet oil field requirements, the engines operate at low speeds, which lessens the wear of engine parts as well as wear of driven pumping equipment.

The engine may be started by hand with a crank or with optional portable 12 volt dc electric starter manufactured by Arrow, or with a permanently

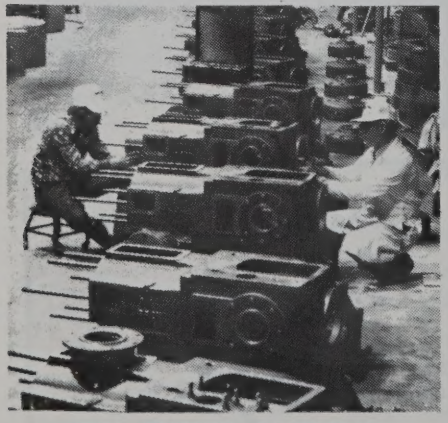
of castings in their engines. They use both gray iron and ductile iron, and castings from our snap machines, cope and drag machines, and more recently from our floor molding, taking in every aspect of our business at Acme. Our business with Arrow has grown considerably in the past year, and we hope our association with that growing company will continue to do so.



C-96 ENGINE ASSEMBLY

HAPPY 50th ANNIVERSARY

It isn't often that you know a person who has begun a career at age 19 with a given company, and is still at that same career with that same company 50 years later. Lyle Fulton began working for Ethan Graham at Acme Foundry on August 16, 1928. He has done nearly every job in the foundry at one time or another, and has accumulated a vast knowledge of metal casting over the years. Lyle's energy is hard to match, and if you're going to walk along side of him, plan to hurry. Lyle began as a laborer, and grew to foundry superintendent, in 1941.

Lyle is a part of the foundry and has worked closely with many other foundrymen at Acme for many years, so we decided to celebrate his anniversary with all of Acme's employees, by serving donuts and coffee throughout the day, Wednesday in our lunchroom and serving cake in the office for other personnel.

A story has appeared in the Oklahoma City Times, Ponca City News, and Blackwell Journal Tribune about Lyle's career. Blackwell's Mayor Garry Whitman proclaimed August 16th, 1978 Lyle K. Fulton Day in Blackwell.

ANNIVERSARIES

Happy anniversary in September to Steve Wood, Dennis Cassady, Stanley Watson, Herman Rosson, Bill Sprueill, Dale Sewell, Ralph Beard, Tommy Hubbard, Jerry Brown, Ernie Greenfield, Marty Martin, Jim Kelly, Stephen Ray Tull, Ernest Hatcher, Glen Epperly, Chris Valentine, Leslie Chriestenson, & Frank Dyer.

Sign in a Personnel Office: "We've got it if we can find it."

SAFETY

SAFETY is a subject that can't be emphasized too strongly. We, all too often, take our safety for granted. We tell ourselves that those things won't happen to us, that we're careful. Statistics tell us that some of us are making mistakes. Accidents don't just happen, and they're not the result of "bad luck". Where safety is concerned, we make our own luck. Accidents are caused by one or several persons. Often enough, the person who is injured isn't the one who caused the accident. This point should make us more aware of our surroundings, our safety equipment, our actions.

Suppose we consider the following illustration. A man is working at a job in which there is a danger of flying particles. A small speck of material gets in his eye because he isn't wearing eye protection. The incident is considered of no inportance because it doesn't bother him immediately. That night at home, pain develops in his eye, and he tries to remove the particle himself. As a result, the eye becomes infected, and medical attention is necessary. Eye protection deffinitely has its place in a foundry. EVERYPLACE IN A FOUNDRY.

Since the first of June of this year, we have had 44 accidents. Six of these were cuts, thirteen have been related to pulled muscles or bruises, three burns, a paint inhalation, one related to heat, and twenty eye injuries. Can you honestly say that you won't be on the accident list next month?

Employees are issued safety equipment at no charge to them. Wearing the equipment is everyone's individual responsibility. We must realize that these safety rules are established for a reason. After we've given the subject adequate thought, perhaps we can all cooperate to reduce the number of accidents we're having.

Do's & Don'ts For Safe Lifting Below the Hook.

1. DO give safety first consideration in all Materials Handling. Follow OSHA standards at all times.
2. DON'T lift a piece without knowing its weight.
3. DON'T make a lift without knowing the capacity of lifting equipment in the method it is to be used.
4. DO familiarize yourself with types of slings available for easiest and safest lifting, and DON'T try to make one type of equipment do everything.
5. DO have lifting equipment inspected by competent inspectors regullarly according to OSHA standards.
6. DON'T hesitate to use specialized outside services for inspections and for training of your personnel.
7. DO impress all personnel of the importance of cooperating with trained inspectors.
8. DON'T take maintenance inspection for granted. Inspect lifting equipment before and recommended after it's used to make certain it is in good condition.
9. DON'T leave lifting equipment that appears to be unsafe where someone else can use it. Remove damaged lifting equipment so it can't be used to make another lift.
10. DON'T use lifting equipment that is damaged to lift loads of lower capacity than the original rated capacity of the equipment. Without complete testing the strength of the equipment is unknown.
11. DON'T leave overloaded lifting equipment in a place where it can be used by someone else. The equipment may fail on the next lift even though the load may be lighter.
12. DO report any lifting equipment that appears to be unsafe.
13. DO report all accidents causing damage to lifting equipment, operating equipment and products.
14. DO report any accidental overloading of a piece of lifting equipment.
15. DON'T leave it to someone else to report all accidents to personnel no matter how minor they are.
16. DO store lifting equipment in proper racks and places so they do not become damaged by bending, cutting or crushing on the floor or on the equipment.
17. DO have crane hook in proper position over the load to keep from overstressing the lifting equipment, and to avoid sliding the load at lift-off. Check crane cables to see if they are perpendicular to the floor when you have a little tension on the crane.
18. DON'T subject lifting gear to unnecessary shock loads. Make lift gradually until slack is completely out of lifting gear.
19. DO consider that it is possible to more than double your load on a piece of lifting equipment because of shock loading.
20. DON'T lift beyond the working load limit of equipment. The safety design factors of lifting equipment gradually diminish over the life of the equipment due to normal wear.
21. DO make certain load can be lifted in secure, stable position.
22. DON'T feel that hitches and attachments will stay just where you put them when slack is being removed before full tension is applied to lifting equipment.
23. DO remove all loose pieces such as pipe, wood blocks, lifting gear from the load before it is moved.
24. DO make certain load is high enough to clear everything in its path, but never lift a load any higher than is necessary in order to move the load safely.
25. DON'T ever lift or move a load over the heads of personnel. Signal and clear the way in the path of a traveling load.
26. DO make certain you are clear of a moving load.
27. DON'T ride on a crane hook, lifting equipment or load.
28. DO remove any lifting equipment from the crane before any welding on the load, so the crane will not be utilized as a ground and be damaged.
29. DON'T expect crane operator to lift or move loads without the proper signals from only one authorized floorman.
30. DO have crane operator refuse to move a load if he is not satisfied with the way the lifting equipment is attached.
31. DON'T leave a load in the air unattended.

PROPER USE OF CHAIN SLINGS

1. DO make certain chain legs hang straight with no twists.
2. DO have the proper length sling for the job. Use adjustable leg slings for shortening or lengthening the legs of a sling. Knots or twists used to shorten a sling leg can cause dangerous wear patterns and stresses to develop in the links.
3. DON'T use any wire, nuts, bolts or repair links to repair chain slings. All repairs must be done by qualified personnel after a complete inspection using approved alloy chain connectors or by rebuilding at authorized chain repair facilities.
4. DO use chain slings where you may possibly encounter a great deal of abrasion.
5. DON'T use chain slings where you need to protect the load from gouging, scratching or nicking.

Proper Use of Fittings-Hooks, Shackles, Turnbuckles, Eye Bolts, Swiveling Hoist Rings

1. DO check fittings for cracks, nicks, bending and excessive wear.

HOOKS

2. DON'T use a hook that appears to have been bent, twisted or spread open. These conditions should be reported to the proper authority.
3. DO use safety hooks and safety latches wherever possible.
4. DON'T use any hook that has been welded or burned in any way. Unseen cracks or stress concentration points may have developed, greatly weakening the hook. Report conditions immediately.

SHACKLES

5. DON'T use any screw pin shackle where the pin is very difficult to turn. The pin is either bent due to overload or the threads have been damaged.
6. DON'T use any shackle that has a nut and bolt or pin of smaller diameter than the holes in the bail.
7. DO use safety shackles wherever possible. The pin must go completely through the shackle before the nut can be attached.
8. DO use the largest bearing surface possible on the shackle pin. This will reduce the bending moment on the pin.

TURNBUCKLES

9. DON'T ever use a turnbuckle in such a position where bending moment can be exerted. The rated capacity is figured on a straight pull.
10. DON'T use a turnbuckle that is hard to turn. The threads may have been damaged or the turnbuckle may be bent.
11. DON'T use a turnbuckle with loose worn threads. Capacity is lost due to reduction of the thread bearing area.

EYE BOLTS & SWIVELING HOIST RINGS

12. DO use shoulder eye bolts screwed in tightly against the face of the load.

(Continued on page 4)

EYE BOLTS & SWIVELING HOIST RINGS

(Continued from Page 3)

13. DON'T use standard eye bolts, other than on single part vertical lifts.

14. DON'T have the eye bolt eye out of parallel with the line of the pull of the sling. You will greatly increase the moment force on the eye bolt and decrease its safe working load.

15. DON'T assume that the rated capacity of an eye bolt in a vertical pull will be the same when the pull is at an angle to the shank of the eye bolt. The rated capacity is greatly reduced.

16. DO use a Swiveling Eye Bolt on all angular loading to get the maximum load capacities.

17. DO use a Swiveling Eye Bolt as an attachment when turning a load.

18. DON'T make a turn with swiveling hoist rings unless the body can swing freely through the turn.

19. DON'T put washers between the swiveling hoist ring and the load surface as this will decrease the rings capacity.

BACKLOG

In December of 1977 we started putting a drive in sales to improve our backlog situation. We were short of work in squeezers, SPO & Milwaukee, but had an increasing backlog in the Main Bay area. Jack Graves was instrumental in finding work for us in the Tulsa area, particularly one customer who is being featured in Acme Today. In fact, the seeds that Jack sowed are still being reaped today. We have under construction, patterns that first saw the gleam of light of day in the early months of this year, when we made up quotes and proposals that take time to consider, order, get patterns, sample and prepare for running. We have been able to get back to seven squeezer molders, but through a attrition in our molders we have been unable to keep the two units without overhead sand manned, but this is not due to lack of work.

We have also been active in the Texas area and up to Dick Batten's recent illness, we were getting regular coverage of our major customers, besides doing some prospecting of other accounts.

In May of this year Bob Fenton joined Acme and took over representation of the customers and prospects recently covered by Dick and this has allowed Dick to concentrate his efforts to implement sales coordination plan and a program for sales and production to be able to follow up on all customers new patterns and samples that are in process at all times. This will be a great help to both our sales personnel and the customer.

We have made very healthy pickup of our backlog with new work and new customers and when we improve our productivity with overhead sand, and a new furnace, we will have little difficulty in getting work to keep them busy.

We have 10 new customers today that we did not have in January, 1978, and we have many patterns from our old customers which have come to us due to the efforts of our sales team.

It takes a continuing effort to keep the foundry operative at full capacity and to keep your jobs going. Our thanks to our sales team for their efforts and hope they continue as actively.

Because of our increasing backlog on the main bay, we decided to do our next modernizing in this area, and we got the overhead sand project completed without stopping any of the operation.

While we have to iron out some bugs in working with the overhead sand units we all agree it's a better set up taking some of the heavy labor out. We have quickly found out that when we cleaned the sand from the main bay floor, we have a storage problem and we have filled our usual shell mold pouring area with the overflow.

Our next step must be to create some sand storage area. To this end, we have placed an order for a 200 T storage tank with a vibratory feeder to make the sand flow out an elevator to fill the tank, and a shakeout unit with a screen and magnetic pulley to screen out the lumps and magnetic particles. This will enable us to put our sand off the floor and the next obvious step is to install the muller capable of mulling sand as rapidly as we need it. We have the muller, a Simpson multi mull capable of 64 tons of sand mixing per hour. To install this we must move the existing muller. This must be done without interruption of the work we are doing, so the old mixer must be moved and back in operation over a weekend.

We have chosen the area of the Milwaukee machines to put the old muller and we are going to take out the old squeezer machine and install the Milwaukees on the southwest side of the new squeezer line.

We have picked Sept. 2nd as the weekend to move the muller and we will have Labor Day Sept. 4th to finish it up.

Our Maintenance crew will be working to complete this phase in the next few weeks.

Our sustained efforts in the foundry will be necessary to pay for these improvements to our facilities and to our work opportunities and equipment.

Modernization of this type is expensive, but essential if we are to continue supplying Quality castings to our customers.

Lyle Fulton inspects cores at Blackwell's Acme Foundry and Machine Shop as one of his daily duties.

Foundry worker marks 50th year

By Jim Bradshaw

BLACKWELL — There's something about working around a foundry that just "gets in your blood," says Lyle Fulton, 69.

Fulton guesses that's why today marks the 50th year he's worked for Blackwell's Acme Foundry and Machine Shop, which pours metal into various forms.

To honor the occasion, the City of Blackwell has made this "Lyle Fulton Day in Blackwell."

"There's something about it," said Fulton. "I'd rather pour iron than feed. It's just fascinating. I'm not retiring. I'm still going to work for as long as I can.

"I came here in 1927 to work. There was no gypsy in my blood," he continued.

Fulton said he started working for the foundry Aug. 16, 1928, when jobs were just beginning to be scarce with the coming of the depression. His father and brother also worked with him at first but they were eventually laid off.

"I've enjoyed my work," Fulton said. "I've done about everything there is to do around here except run main office." Fulton is currently foundry superintendent.

"I was looking for a job. They needed some help, so I came to work. There was someone looking for a job all the time back then. We got short of work. I stayed with it because there wasn't any other place to work," he continued.

The foundry employs about 200 people and performs all sorts of metal casting, especially making a lot of metal cylinders used in engines.

"We've had a lot of things happen around here. We had a fire that destroyed our machine shop in 1945. We had a hellish tornado which completely shut us down from May 25 to June 17 (in the early 1950s)."

Fulton said his most satisfying moment at the foundry was working around the clock to repair the shop after it was nearly destroyed by the tornado.

"I've never given retirement any thoughts," Fulton said.

The Acme Foundry Superintendent
Lyle Fulton

Thursday

Dear Micky and Lyle -

When you married Lyle you didn't know you were marrying a ~~celebrity~~. Sounds like Lyle had the town on its toes for a while. That was great, you should be proud. Sounds like you have been busy with company as usual - sewing and all - I'm sure you enjoyed each one. Don't seem possible they can be grown and children - and us grandma's.

Mamie can't hardly get around very good and Aunt Josephine can't either so that would really be something - Bill and Emma Lou are real good to Mamie to had she can't settle down and except it (that she has to live down there.)

Sure was nice hearing from you -

No more news

Good luck to you both on your retirement. I really am enjoying mine.

Love Kathleen

Please write when you have time.

It will be hard for (2)
him to keep busy now
he is a man of leisure.
I had a lovely trip to
Acapulco Mexico and sure
did enjoy it, been to the
lake, but it is so awfully
hot.

Micky hope this note
finds you all well. We
are all fine here. Kids
back in school and busy
every nite.

Ida was happy to here
Aunt Josephine was feeling
so good. Aunt Mamie
wants to go to Pawhuska
and visit for awhile. But
that would be sad.

Lyle Fulton with some of his bowling trophies

LYLE FULTON

By LOUISE SIMS

There are quite a number of colorful and dedicated people among us here at Acme. One of those people has been with Acme Foundry for 50 years, and he continues to be as vital and interested in Acme's well being now as he must have been in the beginning. We see that side of Lyle Fulton every working day. But he has another side. Lyle is an active and talented person in other areas as well.

Lyle has had a bowling career that possibly won't be equalled. Pictured are some of his most prized trophies, which include trophies for League Championships, Ragtime Doubles Championship, and 230 Club. In 1964 Lyle knocked down 1838 pins in 9 lines. Probably his most priced bowling experience was a perfect 300 game on Feb. 22, 1969. It was the first perfect game in Blackwell in 25 years. Although it's difficult to be certain, we believe only one other person has bowled a perfect game since that time.

Oil painting by number is another of Lyle's hobbies. Pictured is a remarkable example of his work.

Lyle and Mrs. Fulton also enjoy gardening and created a patio with cement blocks, surrounded by stawberry plants.

When asked his opinion of the recent changes at Acme, some of which are setting up the Meehanite process of melting iron, technical advancement of Cupola Ductile iron, the installation of overhead sand for our squeezer machines, and the association of Mr. Fred Allon in the capacity of General Manager of Acme, Lyle is quoted as saying "This is going to be the makings of Acme all over again."

Men like Lyle, who have helped a business to grow over the years, never

(Continued on Page 2)

LYLE FULTON

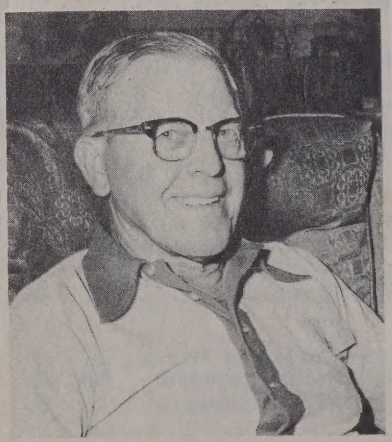
(Continued From Page 1)

outgrow their usefulness. They just keep learning and contributing.

We wish to extend our congratulations to Mr. and Mrs. Fulton on the birth of a great grandson. born Oct. 30, 1977, and weighing 6 lbs. 8 oz.

Lyle & Mrs. Fulton in their garden

A **Foundryman's Day** — Two unusual things happened to Lyle K. Fulton, foundry superintendent, Acme Foundry & Machine Co., Blackwell, Okla., on Aug. 16, 1978. First, he celebrated his 50th anniversary with the company (an increasingly rare event). Second, the mayor of Blackwell proclaimed it Lyle K. Fulton Day in his honor (so



rare that it may never have happened to another foundryman).

Lyle joined the company on Aug. 16, 1928, when he was 19 years old. Since then he has held nearly every job in the foundry and has served as superintendent since 1941. He has no plans for retirement, and, in fact, he says, "I'd rather pour iron than eat." There's a real foundryman for you!

Again. Congratulations. Harold

ACME TODAY | Blackwell, Oklahoma | November, 1977

Featured Department

CORE ROOM

By RAYMOND BURNETT

The oil sand core room is under the direction of Lawrence Self, Superintendent, and Ed Humble, foreman, whose assistant is Raymond Burnett.

The first crew begins working in the core room at 5:00 a.m. This phase has the foreman, Ed Humble and muller operator, Jim Dial, mixing the particular types of sand to be used that day by the coremakers who report to work at 6:00 a.m. The muller operator has a helper, Brett Oberlender, who reports to work at 7:00 a.m. and hauls in supplies for the next day's work.

The bench coremakers are W. E. Duggins, Robert Guy, Mike Richmond, Lester Bruce, and Joe Hatcher. These men are responsible for making all of the small cores that can be loaded onto core cars by hand. After making the cores from sand, the bench coremakers

Bench Coremakers, Mike Richmond & Lester Bruce

load the cores onto metal core cars to be put into the oven and baked for approximately two hours.

Once this procedure is completed, the paste table crew takes over. They are responsible for baking, cleaning, venting, painting, assembling and mudding the cores and storing them in the proper places to be picked up by the molding department to be put in molds. The crew working on the paste table consists of Bernard Bartosovsky, Sharon Anava, Daniel Rives, Helen Jernigan and Chris Valentine, a part-time student who works a split shift.

The two machine operators in the core room are Vernice Honeycutt and Daniel Williams. Their task is to make cores on "blow machines" which use air pressure to force the sand into the core as opposed to being put in by hand.

Our latest and newest method of making cores in the department is the "no-bake machine". On this process, the

(Continued on Page 2)

Supervisory Realignments

by FRED ALLON

There have been some realignments of Supervisory responsibilities and effective Oct. 31st, the following changes were made:

Bob Miller as Production Controller will also supervise the operation of the cleaning room and shipping department, aided by Roy Hurst, James Goll, and Rex Tebow.

Bill Curtis will take up position of Trainee Foundry Engineer and will be working with Lyle Fulton on risering and gating, and Cecil Sodowsky on Pattern Procurement. He will also take over responsibility of Pattern Storage and during the next few weeks we will be inventorying and cataloging patterns in storage. Jim Kincheloe will assume the responsibilities of Quality Control Manager and will be responsible for inspection and customer liason on Quality Matters.

Kenneth Hill will expand his area of responsibility to cover Melt - Mold, Core and Pour and Shake out crews. Art DeCamp, Carroll Brittain, Harding Rose, Houston Hall, Lawrence Self and his assistants, and A. C. Pratt will assist him in their areas.

Max Payne, in his capacity of Industrial Relations Manager will be aided by Louise Sims in the capacity of Personnel Assistant, and between them they will assume responsibility for all Personnel and Industrial Relations functions. We hope you will give your full cooperation to these Supervisors and assist them in carrying out their duties with the greatest effectiveness.

Absenteeism - Presenteeism

The cost of absenteeism was figured in 1974 to cost a company on an average of $146.30 per employee per year.

With the inflation rate as it has been, and the importance of presenteeism in a foundry being greater than in many other jobs, you can bet this has more than doubled in 1977.

Your job at Acme, is important to Acme, otherwise you would not be on the payroll. It is hoped that your job is also important to you.

There are always times when we wake up that we feel "off color". In most cases "sick" is not the word. Generally, if we make the effort and get moving, the feeling will pass and we feel "better".

Making this effort is the difference between a potentially good employee and a poor one. The poor one picks up the phone and calls in "sick", and stays home to nurse his or her feelings recovering to go to work the next day. Meanwhile, at the plant Joe Blo is reported sick and someone is assigned to take his place. Generally the second

Main Bay - Core Makers & Helpers

Featured Department

CORE ROOM

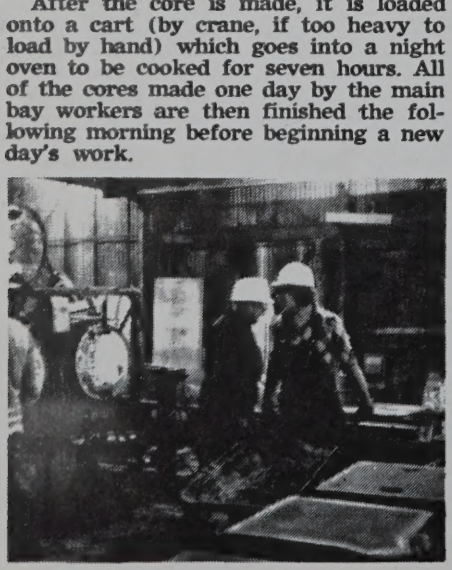
(Continued From Page 1)

machine automatically mixes a binder and acid with the sand and dumps the mixture into the core boxes. This process must be completed within a set amount of time determined by the amount of acid to the binder in relation to sand temperature. As the name indicates, they set up without being baked. Then the coremaker, by hand, rams the core and adds rods, vents or any other necessary means to make easier any further work done on the cores.

The no-bake machine operator is Henry Pendergraft and his two helpers are David Miller and Tom Howard, who make and finish cores and occasionally molds on the 6:00 a.m. to 2:30 p.m. shift.

Also on this shift is the main bay division of the core room which has four coremakers, Ernest Hatcher, cylinder maker, Charlie Epperly, James Zachary and Tom Kerr, and two helpers, Jack Moore and Edward Stevens. Their primary function is to make the large cores (pistons, cylinder heads, etc.) by shoveling sand into the core boxes by hand and using a hand operated air rammer to tuck the sand into the boxes.

After the core is made, it is loaded onto a cart (by crane, if too heavy to load by hand) which goes into a night oven to be cooked for seven hours. All of the cores made one day by the main bay workers are then finished the following morning before beginning a new day's work.



Sand used to make Cores

ENGINEERED IRON

Meehanite! Sorbo-Mat!

To help in our continuing commitment to provide our customers with top quality castings, we have just recently completed a "reinstallation" program covering our processing practices and procedures.

Under the capable direction of Joe Dickman, Service Engineer for Meehanite Metal Corporation, controls were tightened and new procedures established. Also, specifications were converted from Sorbo-Mat to Meehanite.

CONTINUED RELATIONSHIP WITH KESSLER ORGANIZATION

Harry H. Kessler, who in 1933 founded the Sorbo-Mat Process Engineers, purchased the Meehanite Metal Corporation in 1969, thus bringing together the two best foundry consulting companies in the foundry industry. Both processes include pattented procedures, developed to produce the desired graphite distribution and desired metal structures in the casting. Generally in Gray Iron, we are seeking a fine grained pearlite iron. A casting with proper size and distribution of graphite flakes, and a casting free of hard spots and hard corners and edges.

The more extensive research and development progresses, and the technical help the Meehanite service engineers provide in all phases of foundry operations, can only enhance the engineering integrity of castings produced here at Acme.

Whether our customers' specifications call for regular gray iron, Sorbo-Mat controlled iron, or Meehanite Metal, we can meet their requirements and our long time Sorbo-Mat oriented customers will be receiving an equivalent iron.

Absenteeism - Presenteeism

(Continued from Page 1)

man has neither the skill nor experience to do the job as well as Joe and something the second man was originally brought in for suffers, either its not done, or it's not done as well as he can do it.

Acme as a company expects your Presenteeism. Be on your job, with the feeling that you can do it better than anyone else, and be ready to prove it.

"BE THERE!"

NATURE STUDENTS

By LAWRENCE SELF

To any school-age youth in Oklahoma, fall brings more than the end of summer and the beginning of hunting seasons. As the textbook grind gets underway this year, more students than ever before will be adding conservation of natural resources to their curricula. If you're interested in improving or expanding your school's conservation education program, contact your local Conservation District Office; there's one in every county. Another good place for assistance is the state's Conservation Commission headquarters in Room 20 of the state Capitol. The telephone number is 405-521-2384. Other sources of conservation education materials include U. S. Department of Agriculture, U. S. Forrest Service, National Wildlife Federation, Oklahoma Department of Wildlife Conservation and the Soil Conservation Service.

Lyle with one of his paintings

Company Safety Policy

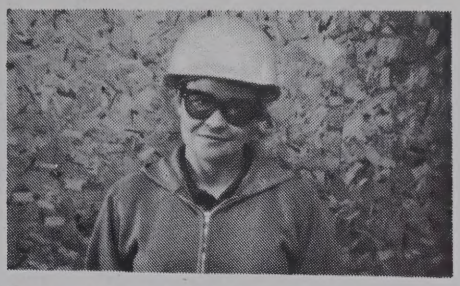
Acme Fondry & Machine Co., Inc. recognizes its responsibility in establishing, and maintaining, conditions and practices in the work place which are conducive to the safety of all employees and visitors to the foundry, machine shop, offices and evirons of the company's premises.

Toward this end the company will lend its support to the Safety Director in elimination of recognised hazards to health and safety. The Company also recognises the responsibility of each and every employee, be it workforce, supervisor, clerical, or managerial, to comply with the safety rules established for the plant and the company's responsibility to enforce compliance with, and to discipline those who consistently ignore and violate these rules.

Note left by a ten-year-old boy: "Mom, I came home with a very bad headache and stomach ache. I've taken two aspirins, a glass of milk, and I've gone out to play football.

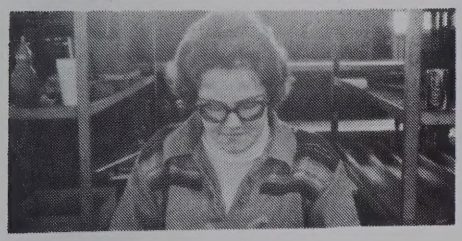
THE GIRLS IN THE FOUNDRY

PAT WYCKOFF, and husband, Merle are Blackwell residents. Pat has been with Acme for eight months, and works in the shell core department.



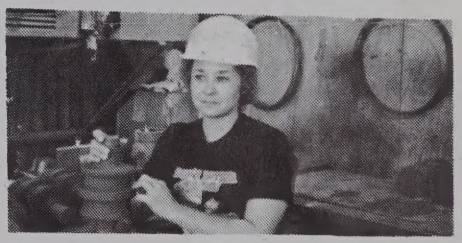
SHIRLEY McBRIDE works in borescope and has been at Acme since Jan. 1974. Shirley has three children, Terry Lynn, James Bradley, and Connie Rae.

HELEN JERNIGAN works at the paste table in the core room and has worked at Acme for two months. Helen has four children, Becky, Cheryl, Sonya and Kinberly.

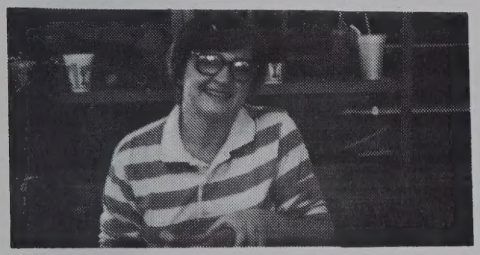


LINDA McANALLY has worked at Acme for 13 months and is in the shell core department.

VELLA WHITE and husband, Jerry, have one son, Stephen. Vella works in shell core, and has been with Acme since Feb. 1973.



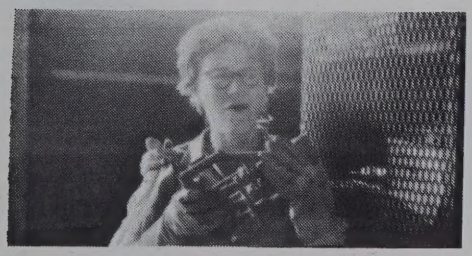
SHARON (Shea) ANAYA works at the paste table and has been at the foundry since May 1977. Shea has one child, Richard, 12 years old.



JANICE BROWN and husband, Norman, have two children, Darrel, age 13, and Yvette 12. Janice has been at Acme since April of 1976 and is in shell core.

SHIRLEY ROWE and husband, Harrison, have two children, Tammy and John. Shirley works in borescope and has been with Acme for a year.

DIANE HIGHTOWER has been with Acme since June, 1974, and works in shell core. Diane and husband, Charles, have one son, Carl, 10 years old.



PAULINE BLAY has been with Acme for 15 months and works in shell core.

JUANITA NAVE has two children, Keith and Kathy, and has been with Acme since Jan., 1975.

LOLA CRAMER and husband, Don, are both Acme employees, and have a daughter, Shawna. Lola has been with Acme for a year.

LESLIE YOUNG. We welcome Leslie to Acme. Leslie is doing general secretarial work at Acme, and is married to David Young, a longtime area resident.

ACCIDENTS

While we all hate to have accidents happen, there are certain things which must be done when an accident happens. Every accident or injury no matter how slight must be reported to your supervisor immediately. If you require first aid, he will refer you to the first aid room.

If you require a doctor's attention, Personnel will make arrangements for you to go to your company doctor, Dr. D. E. Becker, 223 E. Blackwell, Blackwell, Okla.

Failure to report an accident can void any claims and we urge you, for your own protection to comply with this safety rule.

November Anniversaries

Congratulations to the following people on their anniversaries with Acme: Lawrence Shreck has been with us 4 years, Tom Kerr 4 years, A. C. Pratt 26, Bob Blay 8, David Miller 3, Shirley Rowe 1, Gary Betz 1, Billy Plunk 1, Ruby Hadley 1, and Barbara Miller 1.

A BIGGER TAX BITE

Tax Base Increased to $16,500.

If you study your paycheck deductions, you probably have noticed that your Social Security deductions are getting bigger and bigger.

If you are a person who started working between 1937 and 1949, you have watched your yearly Social Security deductions jump from $30 on a $3,000 salary to $895 on a salary of $15,300 during 1976. For 1977 your top tax is $965.25 on a salary of $16,500. (The 5.85% Social Security tax rate remains the same.)

You are not alone in bearing the burden of increased costs for your Social Security, Employers have to match the amount of Social Security paid by all of their employees, and also must shell out increasing amounts for other payroll taxes such as unemployment compensation, workmen's compensation and expensive fringe costs.

Futhermore, the way the law reads, taxes may be boosted again due to an increase in the cost of living. If the cost-of-living index rises at a rate of 3% a year until the year 2014, you could possibly wind up paying a yearly Social Security tax of $5,581 or more! And your employer would have to match this amont!

The following chart will help you get a better idea of what you and your employer will pay during 1977:

Gross weekly Salary	In 1977 you will pay	Your employer will pay
$100	$304.20	$304.20
125	380.25	380.25
150	456.30	456.30
200	608.40	608.40
255	772.20	772.20
275	824.85	824.85
320	965.25	965.25

Years	Amount
1951-1954	$ 3,600
1955-1958	4,200
1959-1965	4,800
1966-1967	6,600
1968-1971	7,800
1972	9,000
1973	10,800
1974	13,200
1975	14,100
1976	15,300
1977	16,500

(Note that under the 1972 Amendments, when future increases in benefits result from the automatic cost-of living provision, the maximum tax base is to be raised, too.)

When the avid golfer arrived in Hades, he was overjoyed to find himself on a beautiful golf course. Grabbing a set of fine clubs sitting near the first tee, he joyfully asked Lucifer, "Now where are the balls?"

"There aren't any," replied his host. "That's the hell of it."

GLENN McCLEARY is quite proud of this calf. At 10 months old the calf weighed 1086 lbs., and had been fed only oats and corn. The calf dressed out at 674 lbs.

SAFETY EQUIPMENT

Considerable opposition has been expressed by many to the rules requiring our employees to wear Safety Glasses **with Side Shields** and it is felt that with a little reflection the necessity of compliance should be apparent.

You only have two eyes, depth perception for driving and almost any sport requires both eyes. With the exposure to wind, either natural or artificially created, and sand from the foundry or other source we have experienced a high number of eye cases. The extent of these has warranted the expenditure by the company for special safety glasses.

Rules for safety protective equipment are made for your protection. Failure to wear them will leave you open to injury and disciplinary action. Loss of sight is a terrible handicap even if only one eye. So wear them whenever you are on Company property.

BUCK AND A HALF

By LAWRENCE SELF

Here's an unusual hunting story saved from last year. On Tuesday, the fourth day of the 1976 deer gun season. Odie Martin was hunting near the little southeastern Oklahoma community of Yanush. Returning to an area where he had seen a good deal of sign, Odie happened upon what was either something out of Greek mythology or a nineteen-point buck. He quickly dispatched the creature and found he had a buck and a half on his hands.

That one-in-a-million chance had happened. Two bucks, a nine pointer and a ten pointer, had locked antlers during a rutting season battle. The ten-point buck died soon after, and predators had helped themselves to all but the head, neck and forelimbs. The nine-point buck apparently was strong enough to fight off predators and seemed to have been feeding regularly since the two deer had locked antlers. We can't help but wonder what kind of wall mount those heads would have made.

November Birthdays

Happy birthday this month to Horace Wittmer, Pauline Blay, Lola Cramer, James Foster, Houston Hall, Marvin Herren, Darrel McAbee, Marty Martin, Harding Rose, Louise Sims, Ray Tull, and Bob West.

For Sale

AKC Registered Brittainy pups, 7 weeks old, $25. 363-1962, Linda.

Used Kenmore dishwasher, 363-3390 Ken Hill.

REGULAR DUCK SEASON

By LAWRENCE SELF

Dates: Statewide October 22 through November 13, 1977 and December 3, 1977 through January 3, 1978. In Cimarron, Texas and Beaver Counties, the season will run from October 15, 1977 through January 5, 1978.

Point System Bag Limit: The daily limit is reached when the point value of the last bird added to the total points of the other birds equals or exceeds 100 points. Possession limit is two legal daily bag limits.

Point Allocation: 100 points - canvasback; 70 points - hen mallard, wood duck, redhead and hooded merganser; 10 points-blue winged teal, cinnamon teal, green-winged teal, gadwell, shovler, pintail, scaup, and merganser (except hooded). All species and sexes not otherwise mentioned are 20 points.

Shooting Hours. ¼ hour before sunrise to sunset.

GOOSE SEASON

By LAWRENCE SELF

LIGHT GEESE: (Blue and Snow)

DATES: October 17 through November 20, 1977 and December 3, 1977 through January 22, 1978.

DARK GEESE: (Canada and White-fronted)

DATES: October 17 through November 20, 1977 and December 3, 1977 through January 8, 1978, except in Alfalfa, Byran, Johnston and Marshall Counties, where the season is open from November 5 through November 20, 1977 and December 3, 1977 through January 8, 1978.

BAG LIMITS FOR ALL GEESE: The total daily and possession limit is five geese. Daily bag limit may not include more than 2 Canada geese, or 1 Canada goose and 1 white-fronted goose. Possession limit may not include more than 2 Canada geese or 2 white-fronted geese or 1 of each. Daily and possession limits may include no more than 1 Ross goose.

SHOOTING HOURS: ½ hour before sunrise to sunset.

"I realize it's hard to get started in the morning, Pete, but it's four-thirty, and we quit in HALF AN HOUR."

Foundryman Finishes 50 Years With Firm

Although he's 69 years old, Lyle K. Fulton, of Blackwell, Okla., doesn't plan to retire. He wants to extend the 50 years he's already worked for the Acme Foundry and Machine Company.

Fulton began with the Blackwell company in August, 1928. He's been foundry superintendent since June, 1940.

To commemorate his 50th anniversary, the City of Blackwell held a "Lyle Fulton Day."

Fulton signed on as an apprentice foundryman with the then two-year-old company along with his father and brother. His father took them to Blackwell after his Nebraska farm went bankrupt.

He worked steadily during the depression years, when 25 cents a day was a lot of money. After completing a four-year apprenticeship, he became a journeyman and then a foreman before being appointed superintendent.

Kept Busy

By the Second World War, the company had grown from six to 36 employes. Wartime needs kept the plant humming day and night. Fulton sometimes put in dawn-to-dusk workdays.

The foundry was so busy, he said, that after several employes quit to accept better-paying jobs elsewhere, the company used German prisoners of war for five months to help out.

Fulton said the company also survived a fire in 1945 and a tornado 10 years later that leveled an entire section of Blackwell.

The superintendent also is very proud of his record of working 48 years and two months without losing any time.

Fulton's wife, Mary, said her husband would rather pour iron than eat. He admits he's got sand in his blood.

But he also likes to bowl, paint, fish, and do lathe work. Retiring has never entered his mind.

3. Card of Thanks

I want to take this opportunity to thank my employers, co-workers, friends, and relation for all the gifts, flowers, telegrams, cards, notes, and calls on the occasion of my 50th Anniversary with Acme Foundry. I especially thank Jerry Evans, James Buttram, Nickles Machine, Mr. and Mrs. Roger Goff, Mr. and Mrs. S. Moon, Mayor Garry Whitman, the First National Bank, Blackwell

Dear Lyle:

It is a pleasure for me to extend to you my sincere congratulations on your 50th Anniversary with Acme Foundry. You possess so many rare qualities among which are excellent workmanship, perseverance, kindness and loyalty. I want to thank you for your dedication to Acme Foundry and for helping us to make it the successful business that it is today. With men of your calibre, we will always remain Number One in our industry.

I send my best wishes to you for the future, and hope that your next 50 years will be spent with us at Acme Foundry & Machine.

My warmest personal regards,

Jerry Evans

Dear Lyle:

Could not help but see a handsome picture in the December issue of Foundry Magazine.

Recognized it as my ole buddy and was so happy for you and want to send you my congratulations and the very best wishes for another 50 years.

Could it be possible, Lyle, that it is a 50th anniversary; that is quite a record. I thought that mine was running a long time until reading about yours. This is my 45th year and it seems like it has been an eternity almost. I hope you are feeling well and that you will continue in the plant as I'm sure the boys do need you and like to have you around.

I send to you my very best wishes and hope that yu continue with the very best of health. Also want to send to you the very best wishes for the Holiday Season.

Sincerely,

Russ

Dear Lyle:

Just heard from Pat Patterson that you recently celebrated your 50th Service Anniversary with Acme and want to add my personal congratulations to the many that I'm sure you have already received.

Times and situations change Lyle, and one of my regrets is that I do not have the opportunity to make as many personal visits as in the past. Never will forget the good old days however, when I did regularly visit Acme-Blackwell and Lyle Fulton. Brings back fond memories. One thing for sure will always bring back memories of you and your good wife -- her recipe for Ritz Cracker Pie which we still enjoy at our house several times a year.

Best personal regards,

May 9, 1955.

We are, therefore enrolling you as one of our Associate Members and taking care of the fees. Your credentials will reach you, at home in a few days.

Among other things, the Institute will tell you, in special reports and memos, how political and economic trends affect you as an individual and what methods you can use to save your money. It will, also, provide you with cost-cutting, production-increasing ideas that are being used every day by thousands in front line management and which can be put to work on your job at Acme Foundry.

All your membership material will go to you at home. I'll be interested in hearing how you like it.

Cordially,

ACME FOUNDRY & MACHINE CO.

ACMELOY METAL
•A Controlled Specification Iron For Exact Engineering Requirements

THE ACME FOUNDRY & MACHINE CO.
GENERAL FOUNDERS AND MACHINISTS
BLACKWELL, OKLAHOMA

May 9, 1955.

. Mr. Lyle K. Fulton,
. 921 North A.,
. Blackwell, Oklahoma.

Dear Lyle:

Probably ever since men have lived on this globe, they've said "THIS is the most difficult time ever in which to live and work".

This has been true ever since World War II, when all of us, companies and individuals, have had a tough job cutting expenses and getting 100% or more for every dollar we spent. Because of the unsettled conditions in the world, that job is growing tougher--not easier.

To do this job effectively at Acme Foundry one thing is certain; we are going to have to rely on more than our own instincts and a knowledge of our operations and business. Businessmen all over the country are up against the same problem. . . tapping their experience may mean some real cost-savings for us.

By the same token, what's happening in Washington and abroad, and the day to day changes in our economy are creating new difficulties and new challenges. While meeting the nation's needs in the fight for survival, we must protect our organization and our people. We can do both only if we remain alert to the current developments.

For some time now, the company has been getting this kind of information from the Research Institute of America. It has a membership of over 30,000 executives, headquarters in New York and Washington and representatives all over the world. Since you are a part of the management group with a tremendous stake in the company's welfare, I'd like you to share these membership benefits with us.

RIA

The Research Institute of America, Inc. New York · Washington · Ottawa

To the Heads of Your Company...

you're one of the key men in management. They make policies. You make them click.

To the people under you, you *are* management. You run the show . . . make the assignments . . . approve or disapprove their work.

From your own point of view, you're a business man . . . taxpayer . . . and an individual.

Any one of these activities is a job in itself. As an Associate Member of the Institute, you receive help on all of them.

Rx *For the Busiest Person in Management*

Business weather has seldom been so changeable. A move by the Kremlin, a decision in London, a crisis in Paris can have sudden repercussions for your company.

As a responsible member of management, you must keep abreast of developments, maintain a flexible outlook and provide the reassurance and leadership your people need in these unsettled times.

Handling this responsibility successfully calls for more information about current problems than you can learn from newspapers. If a crisis is brewing here or abroad — you need to know why it's developing, and how it will affect the nation, business in general, and you and your business in particular.

Report to Front-Line Management, which you will receive every other week, will tell you what's behind the news — and what *you* can do about it both on and off the job.

Besides keeping you briefed on what's happening, and why, each Report to Front-Line Management gives you down-to-earth tips on supervision that you can put to work at once to get better teamwork from your people. Some of these supervisory tips will be geared to new business developments. Others will be concerned with basic problems that exist in all businesses all the time.

Depend on your Reports to Front-Line Management for another type of help, too — help on the problems that beset you as an individual.

Take taxes, for example. Do you know how to determine which type of return will cut the amount of money you have to pay the government? Do you know how to start on January 1st to reduce the taxes you pay a year later?

Do you know how to plan so that you will buy at the most favorable prices? Every other week Report to Front-Line Management gives you answers to questions like these — backed with RIA recommendations on the specific things *you* can do to get the results *you* want.

All this is off-the-job information — but notice — as you pass it on to the people around you — how your prestige grows.

RESEARCH INSTITUTE OF AMERICA, INC.

Report

TO FRONT-LINE MANAGEMENT

The Turning Point In the Cold War

By Leo Cherne

For the past few weeks, I have been privileged to participate in discussions with top government officials on both sides of the Atlantic, culminating in an extended conference with the President of the United States.

Without violating any confidences, I can report to you that the highest authorities are convinced that —

. . . this *moment* is the turning point in the world crisis; and

. . . the counter-offensive of democracy against aggression *must* be launched.

. . . you also that the . . . tracies will seize the . . . in the next 60 days. . . . clusions are the result . . . ic data I have collected . . . I went to Europe early in February at the invitation of Mayor Ernst Reuter of West Berlin. As I indicated in my radiogram from Nuremberg, the Russians were then launching a new drive to force the Allies out of the former German capital. (Special Report to *Front-Line Management*, February 18, 1953.) At that time, Stalin was still alive.

For the past two weeks, I have been traveling with Mayor Reuter, who has come to the United States at my invitation. Let me give you now a distillation of the judgments expressed among the government officials, diplomatic representatives, businessmen, labor leaders and others with whom we have been discussing the German situation, current Soviet tactics, and the new twist of history — Stalin's death.

There's general agreement that the Soviet Union is now substantially weaker. During the past 30 years, Stalin was built up as the god of world Communism. Gods are not easily replaced when they turn out to be mortal. In fact, installing a new god on Stalin's pedestal may prove impossible.

There is some doubt about the actual date of his death. His passing was such a serious blow to the Soviets that the people had to be prepared for it gradually. It's believed that the Russians took at least a week to dole out the story piece-meal and thus reduce the shock. Apparently, even within the Kremlin the secret could not be kept much longer.

Despite the surface unity that Malenkov is trying to fabricate, there are major stresses and strains inside the regime. He may face a titanic struggle with the leaders of the Red Army. Two names figure prominently in that tug-of-war: Marshals Vorosihilov and Zhukov. Several observers who commented on this struggle said of Zhukov,

NEW YORK . WASHINGTON . OTTAWA

By giving you an overall, clear-cut interpretation of business conditions, Report to Front-Line Management strengthens your position — up and down the line—as an informed member of management.

Report to Front-Line Management helps you get ahead after hours, too. If you want to know how to become a more effective leader in social and fraternal groups . . . how to lick stage fright . . . improve your memory . . . save time and trouble . . . protect your health . . . just turn to the "personal use" items in your bi-weekly Reports.

Report to Front-Line Management

People Are Your Job!

People, they say, are funnier than anybody! Treat them alike — and they react differently. Tell one man his work's good — and he produces more. Tell the next one *his* work's good — and he starts to relax.

There isn't a single problem you have to deal with during the day that isn't complicated by the fact that it involves *people*. "I'm only 34," a supervisor told an RIA editor, "but at the end of the day, I feel 70!"

The new employee is an example. Just hiring him may have cost your company eighty to several hundred dollars. He doesn't know you . . . or the people he is going to work with. And *you* don't know whether he's aggressive or shy, quick on the trigger or someone who has to be eased into things at a snail's pace.

Yet you're the person who has to make him feel like an old-timer — and produce like an old-timer — in short order.

And that's just one of the problems you face. You also have to work with the boss . . . give effective orders . . . head off gripes . . . deal with grievances . . . and knit your people into a hard-hitting production team.

Even that doesn't give the full picture. Every last person on that team wants to know what he's doing . . . why . . . and what's in it for him. He — like top management — is counting on you to keep him posted.

For a complete blueprint on the handling of a complex supervisory problem, depend on your monthly Memo to Associate Members.

It gives you easy-to-use rules for handling the inescapable problems that are the same wherever they occur.

You're also given facts and techniques to enable *you* to work out the special angles that apply to the people and circumstances with which you are confronted.

Monthly Memos analyze the psychological factors involved in dealing with people and show you how to apply these principles in your work. The Memos also put you out front when it comes to knowing new procedures, how the economic system functions, etc.

Each Memo goes into your own RIA binder to become part of your permanent equipment as front line manager.

With each of the monthly Memos, you will also receive a Memo Book for everyday use. It's small enough for pocket, purse or wallet, contains useful reminders, provides space for notes and has its own carrying case stamped with your name.

Memo to Associate Members

Inside Story

The Research Institute of America started in a windowless office twelve feet square. That was in 1935.

Today the Research Institute of America has an international membership of over 30,000 — heads of companies like your own; bankers, professional men and government representatives.

Institute members are served by the headquarters staff in New York, the Institute's Washington and Ottawa Bureaus, membership offices throughout the United States and Canada, and RIA correspondents in London, Paris, Berlin, Rome and Tokyo.

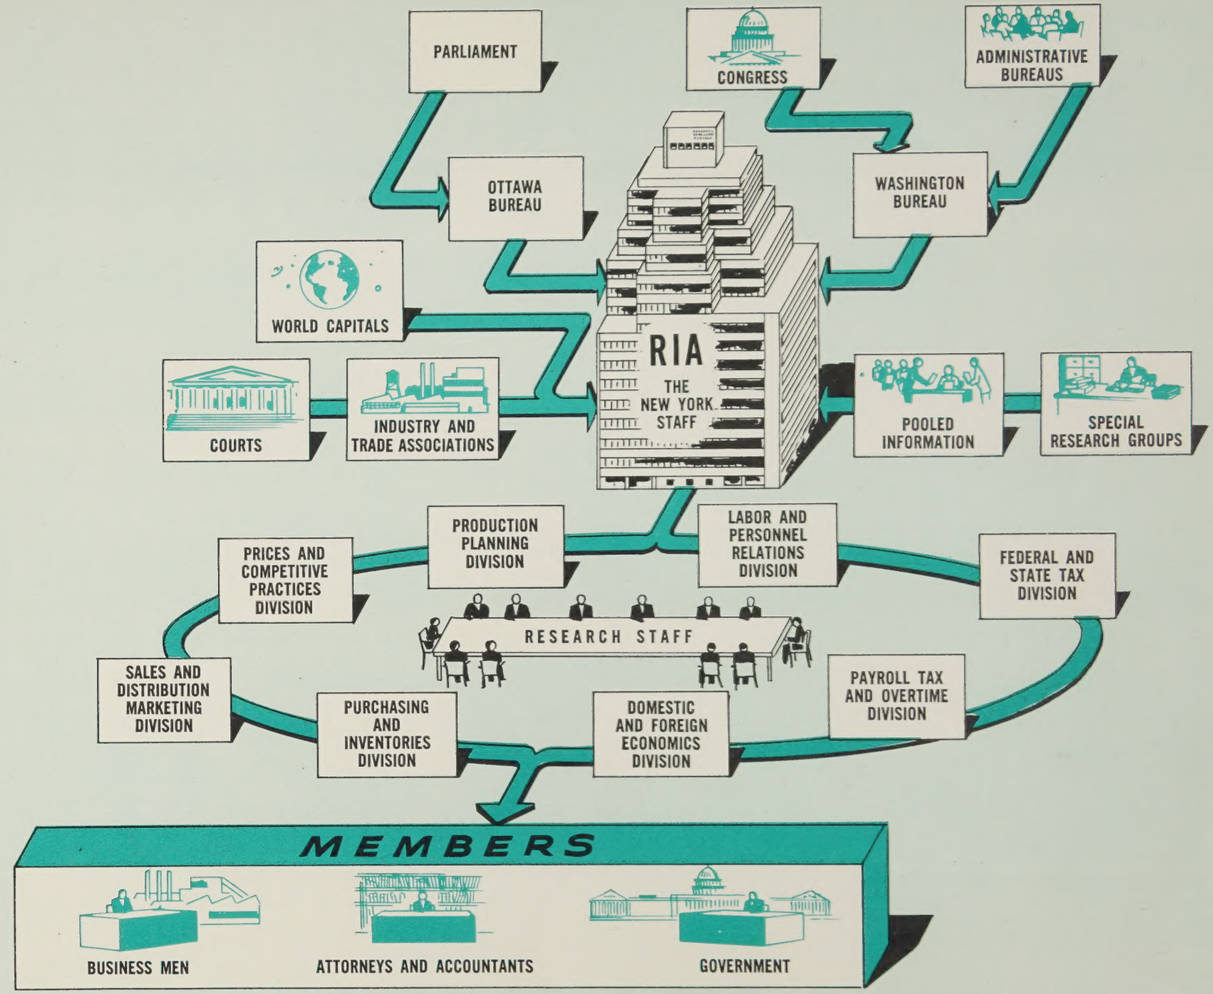
The diagram on the opposite page shows the sources from which RIA's research staff obtains the information that it reports to you and other RIA members. The Washington Bureau covers Capitol Hill — including Congress and over 100 government agencies. The Ottawa Bureau performs a similar service in Canada. Key points across both countries are under constant watch for developments that may affect you or your business.

To this material is added information from another source open only to the Institute — the professional knowledge and experience of tens of thousands of members in every kind and size of business.

Not every item in this mass of data will apply to you or your job — but the Institute staff takes no chances. Working together as a team, they sift, examine, analyze to determine exactly what does affect you and what you can do about it.

The results are sent to you in Report to Front-Line Management, the monthly Memos, special reports, and letters from Institute foreign correspondents.

Your membership privileges, however, include more than membership reports. The Director of Associate Membership welcomes your questions about on-the-job problems, personal interests, current and impending developments. Inquiries are referred to the research staff for study and analysis. As a result, all Associate Members are benefited as well as the individual concerned.



Record of Achievement

In 1937 informed opinion announced that the Wagner Act would be declared unconstitutional and business could safely ignore it.

On the basis of analysis, not opinion, the Institute sent out its first major recommendation to members: Comply with the Act . . . the Supreme Court will uphold it.

The Institute was right – and Institute members had a human relations policy that was legal as well as sound.

Remember Pearl Harbor? Three years before, RIA went out on what the *Saturday Evening Post* called "the longest limb of its career" by predicting: "Watch the Far East. America's war will start there!"

In 1939 Senator Vandenberg described facts supplied by RIA's tax division as a "monumental contribution" to the work of the Senate Finance Committee.

When industry mobilized for war, it followed plans drawn up by the Navy and War Departments with the help of RIA staff members.

During the war the Board of Economic Warfare turned to the Institute for an analysis of the economic and social problems involved in occupying the Pacific islands.

When General MacArthur wanted the Japanese tax system revised, the Army flew the head of RIA's tax division and the Institute's editor-in-chief to Japan to do the job.

This record of achievement didn't just happen. When it comes to providing RIA members and the country with the right answers at the right time, it is Institute research and a $5,000,000 organization that do the job.

Fortune

"The Institute . . . not only reports developments affecting the business man but actually tells him what to do about them. So far it has handled this colossal assignment with astonishing success."

THE Atlantic

". . . Steadiest record for accuracy among current forecasters . . . most thorough and specific of all services in its business analysis."

Harper's

"The Research Institute is proudest of its accomplishment in accurately forecasting every Supreme Court decision of major significance."

THE SATURDAY EVENING POST

"No Institute recommendation . . . has ever been questioned by a court of law . . . One of the Institute's most profitable commodities is prophecy and its batting average has been high – on Supreme Court decisions 100 per cent."

THE NEW YORKER

"To a considerable extent, the Institute's high batting average is due to holding on strenuously to the obvious when large numbers of other people are swayed by their hopes."

WHO'S WHO

"It is to the Research Institute that the alert business man of today turns when snarled in the tangle of tax statutes, fair practice acts, wage-and-hour regulations and labor laws. It is the job of the Research Institute to unsnarl this tangle.

"All this makes the Institute one of the few blessings that has befallen business men in the last ten years and they naturally consider it one of the greatest institutions in the land."

It is with pleasure that

ERISA NOTICE
GROUP LIFE, DISABILITY,
ACCIDENTAL DEATH AND DISMEMBERMENT AND MEDICAL INSURANCE

CONTINENTAL ASSURANCE CO.

On Labor Day of 1974 a new law was enacted to protect the interests of workers in pension and welfare benefits connected with their jobs. Its title is "Employee Retirement Income Security Act of 1974", but it is often referred to by its initials - ERISA.

ERISA requires plan administrators--the people who run plans--to tell you the most important facts you need to know, in writing and free of charge. They must also let you look at plan documents, and buy copies of them at reasonable cost if you ask.

Also, a great many people have control over employee benefit plans. ERISA says that these people--called "Fiduciaries"--must act solely in your interest and be prudent in carrying out their plan duties. ERISA also has other special rules that limit what a fiduciary is allowed to do. Fiduciaries who violate ERISA may be removed, and have to make good losses they cause to the plan.

ERISA requires ACME FOUNDRY & MACHINE CO., INC., the administrator of the plan, to file certain information about the plan with the U. S. Department of Labor. A description of the plan's provisions must be filed with the Department of Labor by May 30, 1976. The administrator must also file an annual report with the Department of Labor. The annual report gives detailed financial information about the plan. The administrator is also required to send a summary of the annual financial report to you, at no charge.

In addition, plan documents and other plan information must be provided to you by the administrator if you request this information in writing. The administrator may make a reasonable charge for these documents, You may wish to find out how much the charge will be before making a written request. However, all plan documents must be made available for your examination at the principal address of the plan administrator and certain other locations.

Certain amendments in the plan may have been made or may be made to meet the requirements of ERISA. The administrator will provide information regarding these amendments.

If you have any questions about this Notice of your rights, contact the administrator. Also, the nearest Area Office of the Labor Department has people who will be able to assist you or provide you with additional information.

CERTIFICATE AMENDMENT

(TO BE ATTACHED TO GROUP CERTIFICATE)

Group Policies No. L 33997

Policyholder: ACME FOUNDRY & MACHINE CO., INC.

IT IS HEREBY CERTIFIED that the certificate to which this amendment is attached is amended so as to provide that the Supplemental Benefit appearing in the certificate which is available to those Covered Persons eligible for benefits under Part A of Medicare is amended in the following respects:

1. The "Benefits" provision is amended by adding the following paragraph: "Initial Medicare Deductible means the in-patient hospital deductible under Part A of Medicare which is determined by the Secretary of Health, Education, and Welfare as being applicable for a given calendar year and which is used to determine the amount payable on behalf of a Covered Person eligible under Part A of Medicare for inpatient hospital services arising from any spell of illness."
2. Section (a) of the "Covered Expenses" provision is amended to read "The Initial Medicare Deductible during the first 60 days of hospital confinement, plus charges made for whole blood (not to exceed 3 pints nor $25.00 per pint), provided, however, that payment will not be made for whole blood when replaced by or on behalf of the Covered Person."
3. Section (b) of the "Covered Expenses" provision is amended to read "25% of the Initial Medicare Deductible per day of confinement for each day commencing with the 61st and ending on the 90th day."

With respect to this amendment, "Medicare" means Title XVIII of the Social Security Act of 1965, as amended.

This amendment takes effect on December 1, 1975, for those Individuals insured as of that date and shall be effective concurrently with the certificate to which it is attached for those Individuals becoming insured subsequent to such date, and is subject to all the definitions and provisions of the Policy not inconsistent herewith.

CERTIFICATE AMENDMENT

(TO BE ATTACHED TO GROUP CERTIFICATE)

Group Policies No. L 33997

Policyholder: ACME FOUNDRY & MACHINE CO., INC.

IT IS HEREBY CERTIFIED that, effective on and after November 1, 1975, in accordance with the terms of the above described policies, as amended, the certificate to which this amendment is attached is amended in the following respects:

1. Sub-section (b) of that section entitled "TERMINATION OF INDIVIDUAL INSURANCE" appearing on certificate page LP 46340 G-2 is amended to read as follows:

   (b) upon termination of his membership in the class or classes eligible for insurance under the Policy, except that lay-off shall not be considered as termination of membership for a period of three months next following the commencement of such lay-off,

2. Sub-section (c) (1) of that section entitled "TERMINATION OF INSURANCE" appearing on certificate page L 312-706 is amended by the addition thereto of the following:

   Absence from work due to lay-off shall not be considered as termination of employment for a period of three months next following the commencement of such lay-off with respect to all benefits other than Accident and Sickness Benefits.

Continental Assurance Company

Chairman of the Board

L 836-647

NORMAL RETIREMENT DATE

Your Normal Retirement Date will be the first day of the month coinciding with or next following your 65th birthday. If, however, you are over age 60 when you first enter the plan, your Normal Retirement Date will be the December 31, coinciding with your completion of 5 years of participation in the plan.

EARLY RETIREMENT

You may elect to retire on the first day of any calendar month after you have completed ten years of participation in the plan, fifteen years of service with the company, and after you have attained at least age 60. The benefit payable upon early retirement will take into account your full years of actual service worked up to your date of early retirement. The resultant benefit will then be actuarily reduced due to the fact that you will be receiving your benefit early.

POSTPONED RETIREMENT — 45 Full years will be my credit

With the consent of the company, you may postpone your retirement for up to 5 years past your Normal Retirement Date. The retirement benefit will then be the same as it would have been at your Normal Retirement Date and it will begin as soon as you actually retire. SAW Roger 8-1-74

DISABILITY RETIREMENT

If you should become permanently and totally disabled you will be fully vested in the actuarial present value of your earned retirement benefit. This vested pension will begin at your Normal Retirement Date. In cases of extreme hardship, an employee may receive his benefit early.

TERMINATION OF EMPLOYMENT

If you should terminate your employment or if you are fired prior to retiring, you will have a vested right to your earned retirement Benefit according to the schedule set out below. Your vested pension will be deferred to your Normal Retirement Date.

Years Under the Plan	Vested Portion
less than 1	0%
1 but less than 2	10%
2 but less than 3	20%
3 but less than 4	30%
4 but less than 5	40%
5 but less than 6	50%
6 but less than 7	60%
7 but less than 8	70%
8 but less than 9	80%
9 but less than 10	90%
10 years and over	100%

If your death is the reason for termination, then your named beneficiary will receive the actuarial present value of your earned Retirement Benefit in one lump sum.

If your termination is the result of your being convicted of a felony against the Acme Foundry & Machine Co., Inc., your right to a vested pension will be forfeited.

TYPES OF PENSIONS

The Normal pension will be paid to you for as long as you live. Payments will be made directly to you by the Continental Assurance Company.

If you desire you may elect to have additional features built into your pension. Any additional features will reduce the size of your benefit according to the value of the feature that you desire:

1. **Joint and Survivorship Annuity**
   You may elect this feature that would guarantee payment of the pension for as long as you and/or your spouse live.

2. **Life Annuity with a Guaranteed Period (5 or 10 years)**
   You may elect the feature that would guarantee payment for as long as you live, **but** should you die prior to receiving a set number of monthly checks (60 or 120 months), your beneficiary would receive the pension for the balance of the guaranteed period.

FUTURE OF THE PLAN

It is our intention to continue the plan indefinitely. In the event that it becomes necessary to modify, amend, or discontinue the plan, no such change shall deprive any Employee of his rights to any benefits already accrued under the plan. If the Plan should be discontinued, all contributions paid into the plan shall be used exclusively for the benefit of you and your fellow Employees.

CREDITED MONTHLY COMPENSATION

Your "Credited Monthly Compensation" shall be the average **total** compensation that you receive from the company during the five years immediately preceding your Retirement Date, expressed in whole dollars per month.

RETIREMENT BENEFIT EXAMPLE

John Jones will retire on January 1, 1969. He will then have 28 full years of service with the company. His total compensation (as shown on his W-2 form) during the five years immediately preceding his retirement is as follows:

1964 = $3,500, 1965 = $3,700, 1966 = $4,100, 1967 = $4,800, 1968 = $5,000.

We would compute his monthly pension as follows:

Year	Compensation
1964	$3,500.00
1965	3,700.00
1966	4,100.00
1967	4,800.00
1968	5,000.00
Total Credited Compensation	$21,100.00

$$60 \text{ (months)} \;\overline{)}\; \$21{,}100.00 = \$351.66 \text{ or } \$352.00$$

His "Credited Monthly Compensation" would be $352

We would then find .3% of $352. $352 \times .3\% = \$1.06$

We then multiply $1.06 times his total years of service

$\$1.06 \times 28 \text{ (years)} = \$29.68$ or $30.00

John Jones' Monthly Pension would be $30.00

EFFECTIVE DATE

The effective date of the plan is December 31, 1968, and each succeeding December 31, shall be known as the anniversary date.

ELIGIBILITY REQUIREMENTS

If you are a full-time Employee, you will be eligible to participate in the Plan on the Effective Date or the Anniversary Date coinciding with or next following your completion of the following requirements.

1. You have attained at least age 30.
2. You have completed at least 3 consecutive years of service with the company as a full-time employee.

COST OF THE PLAN

The entire cost of the plan will be paid by the Acme Foundry & Machine Co.

RETIREMENT BENEFITS

If you are an eligible Employee, on your Normal Retirement Date you will begin to receive a monthly pension equal to .3% of your "credited monthly compensation" multiplied by your total number of full years of service with the company, as a full-time employee, subject to a maximum monthly pension of $300.00. The monthly pension will be rounded to the nearest dollar.

MASTER POLICY TO GOVERN

This booklet has been prepared to explain briefly the benefits available to you under our Pension Plan. While we believe it is correct in its explanations, the exact terms of the plan are stated in and will be governed by the Master Policy issued to Acme Foundry & Machine Co., Inc., by the Continental Assurance Company.

THE ACME FOUNDRY & MACHINE CO.

GENERAL FOUNDERS AND MACHINISTS

BLACKWELL, OKLAHOMA

TO OUR EMPLOYEES:

In recognition of your loyalty and service, a Pension Plan will be initiated on December 31, 1968. The plan will be underwritten by the Continental Assurance Company of Chicago, Illinois.

The Plan is designed to supplement any retirement benefit you may receive under the Federal Social Security Act.

We believe that this Pension Plan is an important part of your future planning and will provide more security for you and your family.

This booklet describes the major features of the Plan and the benefits provided. A careful reading will familiarize you with the principal provisions and enable you to have a better understanding of them. In the event you desire additional information, we will be happy to assist you in finding it.

Sincerely yours,

ACME FOUNDRY & MACHINE CO.

Acme Foundry fire loss in the millions

By HELEN SEUBERT
AND
CHARLES ABBOTT
J-T STAFF

A spectacular fire in Acme Foundry's machine molding pattern storage area Tuesday night destroyed $1 million in patterns.

The assessment was made by Acme officials Wednesday morning after surveying the damage caused by the fierce blaze discovered shortly before 8:29 p.m. by an Acme employee.

"These patterns belonged to our customers all over the United States," a weary Acme executive told the J-T.

About 85 percent of the patterns stored in an overhead area in the building were lost. These were wood and metal core boxes, some of long-burning magensium. They were an industrial accumulation of longstanding, the official said.

"We are taking inventory of the pattern equipment salvaged and will start advising our customers immediately. The ones destroyed must be resubmitted by customers and remade," he stated, saying it would be an extensive process.

The foundry executive said only about 25 percent of the firm's employees were out at the plant Wednesday.

He predicted the foundry would be in partial operation Monday.

Fire, of undetermined origin, raged out of control within the storage area as firemen sought to get it out and contain it to the area housed within sheet metal walls and having access only by metal stairsand a door from the north side of the building.

Acme crews removed stores of calcium carbide from a section of the plant nearby as a precautionary measure. If gotten wet, the chemical would be transformed into a noxious gas.

"We didn't call our people out, except foremen, but they turned up to help and they certainly did, working alongside firemen through the night," the spokesman said.

He praised the local fire department, other firefighters and volunteers for heroic efforts as they battled flames from materials not easily extingueshable and labored in billowing, acrid smoke.

"No one was injured and we are thankful for that."

At one point during the fire, the power was turned off when loose wires accumulated throughout the area. Threatened with a freeze-up by the cutoff, the foundry's electric furnace and its 17,000 pounds of liquid metal caused Acme officials and crews extra worry. With a six or seven hour safety margin, they debated pouring the metal into a receiving pit but decided on a restart after about three hours.

In addition to the loss of hundreds of patterns, the building suffered damage to the outside roof despite fire department aerial wetdown and to motors when water filled their holding pits.

Acme's spokesman said the entire loss would only be partially covered by insurance.

Patterns salvaged Wednesday are being stored in one of the buildings on the industrial site until customers can be notified.

Firemen and units from Blackwell, Tonkawa, Ponca City, Braman and Perry aided directly or acted as back-up units in fighting the blaze. Blackwell Fire Chief Phil Carroll said an 8:29 p.m. alarm was turned in and firemen had the fire out by 11:30 p.m.

Local firemen remained on the scene until about 8:30 a.m. today on an emergency basis, however.

Carroll said the cause of the blaze is under investigation.

Continued on page 20

Fire

Continued from Page 1

He said firemen saved about as much in the value of equipment as was lost to the fire, and estimated the loss as "quite considerable.

The fire chief said patterns, worth millions, are kept in five separate storages areas of the foundry and most of the patterns were burned in the building where the fire broke out.

Carroll said half of the floor containing the patterns burned through and collapsed and the roof fell in. The patterns were stored above the main foundry.

All available local firemen, 25, responded and Tonkawa sent two pumper trucks. Ponca City and Braman sent one pumper each and Perry sent a truck to Tonkawa to back-up Tonkawa firemen battling the foundry blaze.

Firemen were hampered some by low water flow. Carroll said a fire of Tuesday night's magnitude requires about 3,000 gallons of flow a minute and the flow available was about 1,800. He said 900,000 gallons of water were used to bring the fire under control.

Four firemen received hot water scalds but none required hospital treatment. Sr. Capt. Willard Barnes and Capt. Terry Bonewell suffered from overheat and smoke inhalation and volunteer J. C. Estes was overcome by smoke. Carroll said Lt. Mickey Phillips received a back injury in trying to get a fire hose up a stairway. He said none of the burns or injuries was serious.

"Willard and Terry are both OK today. They fought the fire about two hours when they were overcome," Carroll said.

During the height of the blaze some type of poisonous material was removed by foundry personnel and firemen were required to wear protective masks to battle the blaze.

He termed it the most costly fire in the 22 years he's been with the fire department. He said only the Oklahoma Tire and Supply Co. fire would be bigger, and if not, the foundry fire would be the biggest in Blackwell's history.

The blaze was the second major fire at the foundry, and the previous, a maintenance shop blaze, was small, compared to Tuesday night's fire, Carroll said.

"The safety record from fire and fire prevention at the foundry has been excellent," Carroll said.

A police car caught fire enroute to the fire, the result of a transmission line break. The blaze ignited from the hot engine. Police said the unit's fire extinguisher was with the fire department to be refilled and fire extinguishers from other police units were used to put the blaze out.

Carroll praised the assistance of the police and street departments, power plant workers, and the city electrical and maintenance departments as "all doing a tremendous job." REACT and fire department ladies auxiliary personnel furnished coffee, sandwiches and soft drinks.

REACT WAS THERE—Chikaskia Valley REACT came on the scene of Acme Foundry's fire Tuesday night checking in out of the way but near enough to provide gallons of coffee and sandwiches and doughnuts for bone-weary firemen and helpers. REACT got supplies from Harvey's Grocery to supplement its own. Seven or eight members were on the scene and 3 on standby. Team Leader Lonnie McCullough was there, too—but since he works for Acme, he was too busy elsewhere. Here, Fireman Jay Jones takes time out for a smoke and a cup of coffee. (J-T Photo)

Amtrak sentiment not s

By TERRY WADE
J-T Washington Bureau

WASHINGTON—There is growing sentiment here for continuing, as is, the Amtrak rail service.

The sentiment was given renewed momentum with the recent reduction in gasoline supplies and appears to have at least a decent chance to overcome an administration proposal that would reduce the Amtrak system by some 43 percent.

As the lines grew and weekend automobile trips became more uncertain rail lines became more popular and the notion that perhaps the system could be salvaged grew.

The Transportation Department did not make the decision to cut the Amtrak system without long and considered thought.

Nor was the decision made independent of knowledge that we have and will continue to have an energy crisis in this country.

The decision was made because there has been no real public interest in using the rail system for years and despite the brief rush to the ticket windows recently there are no signs that the public will ever again turn to the railroad as a primary means of transportation.

It is conceivable that these rail lines might serve well during the holiday season, but what of the hundreds of days between?

TOUGH WAIT—Worried Acme Foundry officials stayed on the scene of Tuesday's fire, helping direct operations and assisting firemen in their efforts to contain the $1 million blaze. From left are Acme Manager Bob Fenton and two of the foundry's owners, Jim Buttram (center) and Richard K. Batten (far right) with a weary crewman. (J-T Photo)

FURNACE RESTART—Power, turned off around 9 p.m. Tuesday in a precautionary measure against danger from loose wires, stilled Acme Foundry's electric furnace containing 17,000 pounds of molten metal. Around midnight, with only about three more hours of safety margin against metal set-up from lack of heat, workmen restarted the furnace, ending some anxious moments. Here Acme Manager (atop the furnace) watches the lid come down. Sand had been banked around the hood to retain heat. (J-T Photo)

SMOKE BILLOWS from the patterns department of Acme Foundry where a fire broke out and caused an estimated $1 million—plus damage to patterns stored at the building. The first alarm was sounded at 8:29 p.m. Several firefighters, professional and volunteer, were overcome by the smoke and intense heat. The fire was finally put out about 11:30 p.m. (Staff Photo)

Retirement Fund:

Have you ever moved a checker, just to let your partner win? Or have you tipped a newsboy so you'd see his sudden grin? Or in the dusk of evening when a chill is in the air, have you lullabied a baby in a cushioned rocking chair? Such little secret pleasures build a fort of inward joy that all lifes disappointments lack the power to destroy. Not only do they keep you safe from loneliness and tears, you'll find they are the nuggets that become your golden years.

Blackwell Industrial Profile

Acme gives new meaning to the words 'pumping iron'

By CAL STANKE
J-T Managing Editor

acme (noun) — the point of utmost attainment; peak.

— The American Heritage Dictionary

Pictures between pages →

If you've ever watched a Roadrunner cartoon, chances are you probably saw Wile E. Coyote using an Acme brand product — Acme jet roller skates, Acme rockets, Acme catapaults or a giant Acme robot shaped like a coyote.

He never catches the swift desert bird, but nevertheless, it is a funny cartoon to watch.

Although "The Roadrunner" episodes are fictitious stories, there is nothing fictitious about Acme Blackwell Inc.

Acme Blackwell Inc., a foundry located at 400 E. Frisco Ave., has been in business since 1926 producing everything from oil field drilling equipment to parts for the U.S. government's submarine fleet.

And there's more good news.

"The foundry business is starting to pick up," according to Floyd Hildebrand, Acme production manager.

"The foundry business in general has been down since '83 or '84 because the oil business, particularly in Oklahoma, was hurt bad," Hildebrand added.

"The whole economy was hurting. The number of oil rigs dropped. A lot of families went out of business and never came back."

But Acme is going strong.

Making molds out of gray and ductile iron, Acme works as a "jobbing" foundry creating specific parts for customers.

No, this Acme does not make the products Wile E. Coyote buys, but it does make parts for companies such as Kimray Inc. and Fife both of Oklahoma City, Cessna Aircraft, Coburn Optical of Muskogee, Masters Machine Tool of Hutchinson, Kan., Tuthill of Chicago, Byron Jackson and Borg-Warner.

Hildebrand said Kimray Inc. owns Acme. Kimray — which makes gas valves, parts for hydraulic jacks and gas and oil related parts — bought Acme Feb. 28, 1985.

Acme's leader

At least three Acme employees have worked there for more than 40 years. That may make plant manager John McMillan — who has only been here 3 months — look like a youngster at 49.

McMillan started at Acme this January after working as engineering plant manager at TDS Foundry in Rosenburg, Texas, for 6 years.

However, McMillan is no stranger to the foundry business. The Tulsa native has 28 years experience in foundries — mostly in Texas, he said.

What Acme makes

Acme makes many parts for many companies. Here are just a few specific examples:

Cecil Sodowsky explained that Acme produces parts for M.D. Pneumatics which, in turn, builds submarines and high-speed rotors for pumps.

(The word "pneumatics" means of or pertaining to air or other gases. M.D. Pneumatics uses air to transport parts.)

Sodowsky added that Acme makes parts for the machines that make potato chips and other snacks for Frito Lay. Acme also makes parts for tools and machines for Mac Food Processing Equipment of Sabetha, Kan.; and oilfield drilling equipment for Halliburton Service of Duncan.

In addition, Acme makes impellers — rotating devices used to pump water or force gas in a given direction under pressure.

Acme gives new meaning to the words 'pumping iron'

By CAL STANKE
J-T Managing Editor

Pictures between pages →

acme (noun) — the point of utmost attainment; peak.

— The American Heritage Dictionary

If you've ever watched a Roadrunner cartoon, chances are you probably saw Wile E. Coyote using an Acme brand product — Acme jet roller skates, Acme rockets, Acme catapaults or a giant Acme robot shaped like a coyote.

He never catches the swift desert bird, but nevertheless, it is a funny cartoon to watch.

Although "The Roadrunner" episodes are fictitious stories, there is nothing fictitious about Acme Blackwell Inc.

Acme Blackwell Inc., a foundry located at 400 E. Frisco Ave., has been in business since 1926 producing everything from oil field drilling equipment to parts for the U.S. government's submarine fleet.

And there's more good news.

"The foundry business is starting to pick up," according to Floyd Hildebrand, Acme production manager.

"The foundry business in general has been down since '83 or '84 because the oil business, particularly in Oklahoma, was hurt bad," Hildebrand added.

"The whole economy was hurting. The number of oil rigs dropped. A lot of families went out of business and never came back."

But Acme is going strong.

Making molds out of gray and ductile iron, Acme works as a "jobbing" foundry creating specific parts for customers.

No, this Acme does not make the products Wile E. Coyote buys, but it does make parts for companies such as Kimray Inc. and Fife both of Oklahoma City, Cessna Aircraft, Coburn Optical of Muskogee, Masters Machine Tool of Hutchinson, Kan., Tuthill of Chicago, Byron Jackson and Borg-Warner.

Hildebrand said Kimray Inc. owns Acme. Kimray — which makes gas valves, parts for hydraulic jacks and gas and oil related parts — bought Acme Feb. 28, 1985.

Acme's leader

At least three Acme employees have worked there for more than 40 years. That may make plant manager John McMillan — who has only been here 3 months — look like a youngster at 49.

McMillan started at Acme this January after working as engineering plant manager at TDS Foundry in Rosenburg, Texas, for 6 years.

However, McMillan is no stranger to the foundry business. The Tulsa native has 28 years experience in foundries — mostly in Texas, he said.

What Acme makes

Acme makes many parts for many companies. Here are just a few specific examples:

Cecil Sodowsky explained that Acme produces parts for M.D. Pneumatics which, in turn, builds submarines and high-speed rotors for pumps.

(The word "pneumatics" means of or pertaining to air or other gases. M.D. Pneumatics uses air to transport parts.)

Sodowsky added that Acme makes parts for the machines that make potato chips and other snacks for Frito Lay. Acme also makes parts for tools and machines for Mac Food Processing Equipment of Sabetha, Kan.; and oilfield drilling equipment for Halliburton Service of Duncan.

In addition, Acme makes impellers — rotating devices used to pump water or force gas in a given direction under pressure.

How they do it

After an order for a product is taken, the engineering department draws up plans for that specific piece. Using T-squares and triangles to make line drawings, blue prints are created.

Sodowsky and his team then trouble shoot for things that may go wrong, like shrinkage. (Molten iron contracts as it cools; hence, parts sometimes end up smaller than the designers wanted them to be.)

David Miller said the blueprint is then fed into a Summagraphics Summasketch Professional computer to prevent costly mistakes and time delays.

Miller said the computer makes a copy of the blue print "so you can see ahead of time how your casting is going to turn out so you can make necessary adjustments to ensure quality and save time out on the floor with problems."

From there, a pattern the exact same size and shape as the desired finished product is created out of wood and/or aluminum.

Cores are necessary for many pieces. A core will be created and placed where metal is not wanted — like the hollow space or void inside a bowl or pipe.

After a pattern is made of the core, the pattern is sent to the core room.

Cores are then made out of one of three main types of sand: isocure, shell or no-bake sand. These sands have chemical binders and catalysts added to them so the grains remain firmly in shape after a core is made.

Usually, heat or gas is used to get the sand to bind. For example, shell sand is heated to 550 to 600 degrees, according to core room foreman John Hood.

And the sand stinks. There's no polite way to say it.

"Smells like dead fish," Hood said.

One of the isocure machine operators explained it this way:

"Your clothes stink, and you never really get the smell out of them," said Leroy Hoose. "The wife won't come near you," he said with a chuckle.

"But you get used to the smell after a while."

Hood said there is no danger to employees inhaling the smell all day, and most days the door of the core room is wide open to let in fresh air.

Or air from the building next door.

Next door is the foundry room, also referred to as "the floor." There men work with another stench — the smell of molten iron 2500 to 2800 degrees hot.

"Iron really stinks quite a bit," said Gary Betz, melt supervisor.

But there's bound to be a great feeling of accomplishment in this department.

Here is where the final product is created. The workers in this part of the plant get to see the outcome of the customer's desired product and the engineer's carefully worked plans.

These men sweat for a living and come home wearing the black sand that makes the molds that earn them a living.

Theirs is a physically hard job, and if they don't come home exhausted and thirsty, it was a slow day at the plant.

There's risk involved too, but then it's hard to imagine not having some risk involved when you're standing next to a 2,700-degree tap furnace bubbling with 18,000 pounds of molten iron.

Gary Betz sports a gray T-shirt with numerous holes from little drops of molton iron that have splashed on him and burned through to his skin.

"No one works here without having that happen to them at least once," he said.

"They usually bounce off you," Betz calmly reassures the reporter, but, he quickly adds, "The worst part is if it goes down your pants or your boot — it usually burns you before you can get it out."

Betz said the men all wear protective clothing like aluminized leggings or chaps to reflect the heat, leather spats to cover their shins and calves and tough, durable work boots.

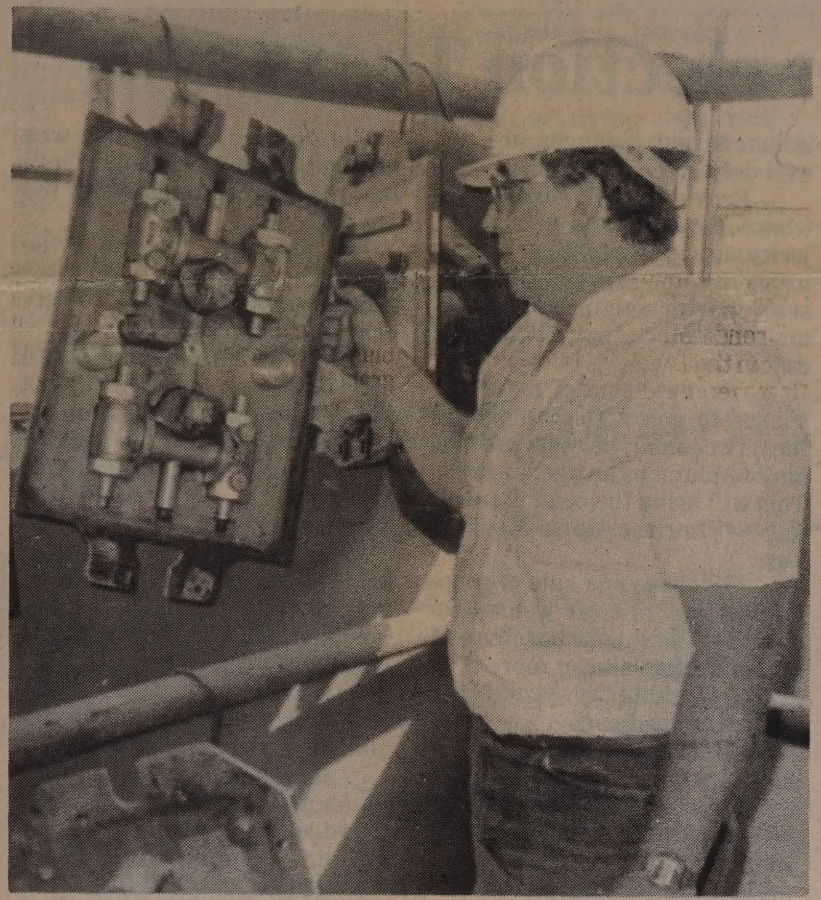
Some of the other men have it much easier. They get to work next to machines that slam up and down all day long with a constant loud "BANG BANG BANG" while others stand next to grinders that send sparks flying as they remove risers, burrs and other unwanted bumps on the finished products.

In between those steps, shakeout crew workers have to pound the sand out of cope and drag molds in flasks.

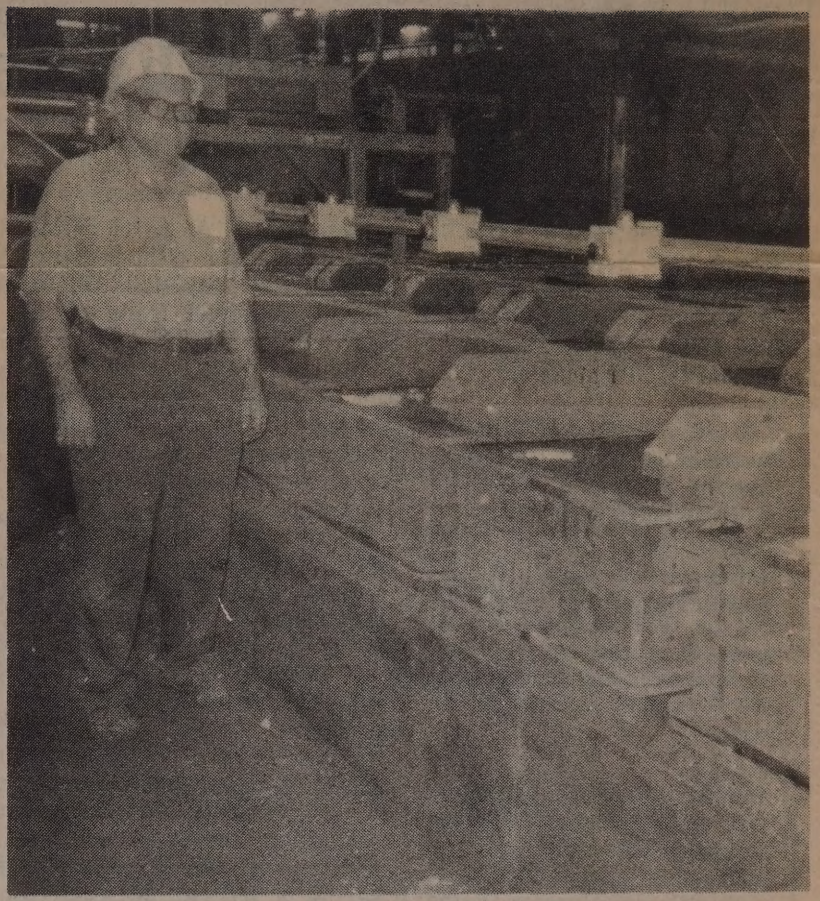
So there's noise, there's sparks, there's intense heat, there's stink, and there's a bad smell at Acme Blackwell Inc.

But there's something else at Acme that Wile E. Coyote and many others may not be aware of.

There's pride.

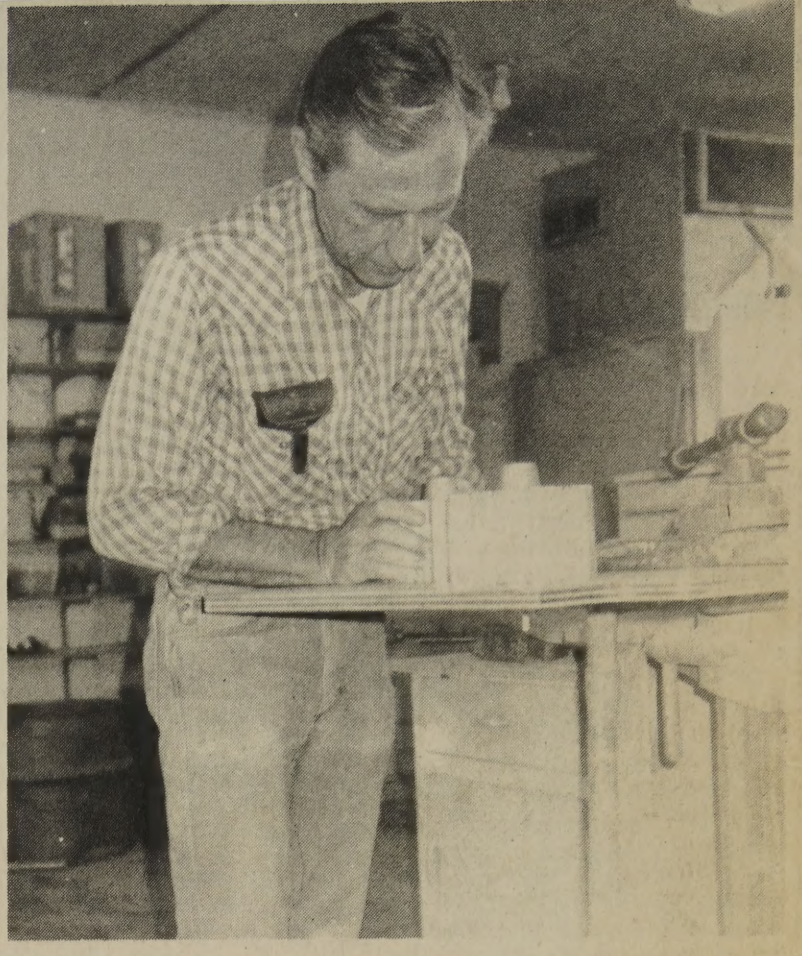


JOHN McMILLAN holds a completed pattern of a valve body for Kimray Inc. of Oklahoma City. Kimray is Acme's parent company. McMillan just took over as plant manager at Acme in January after working at TDS Foundry in Rosenburg, Texas. McMillan has 28 years experience in the foundry industry.



HARDING ROSE works on the $1 million International Molding Machine just installed at Acme three months ago. The machine has helped workers produce as many as 224 parts in one day, but it has a capacity to do even more, Rose said. Rose, the molding supervisor, has worked at Acme for 42 years.

CECIL SODOWSKY works as a pattern engineer for Acme Blackwell Inc. Sodowsky has put in 49 years as an employee of Acme. Acme itself is only 62 years old. Shown here, Sodowsky draws up plans for a new ductile iron casting for a customer.



JACK MILLER performs rigging work as pattern shop supervisor. Miller has worked there for 42 years. His son, David, is a pattern engineer and safety director. David Miller has worked at Acme for 15 years.

Acme-Blackwell sold to Bartlesville pair

By TERRY GROOVER
J-T Managing Editor

"Things moved very quickly for us. Two weeks ago, we didn't think we were in the running," said Adrian L. Bregnard, co-owner of Eagle Iron Inc. But today, he and partner Marcus P. Bates, both of Bartlesville, are the owners of what was Acme-Blackwell.

The pair officially purchased the gray-ductile iron foundry, including land, buildings and equipment from KimRay Inc. of Oklahoma City on Tuesday morning.

Acme-Blackwell was closed on Dec. 20 by KimRay, who cited the foundry's strain on the parent company's finances for the decision. Acme's closing left more than 50 employees out of work.

However, Bregnard said many of those employees will be rehired by Eagle Iron and the company is expecting to be in operation by next week and to be pouring iron by the end of the week.

"We will start with around 25 or 30 employees and will grow as fast as conditions will allow. We hope to be at around 55 in a matter of months. We will get to the levels as quickly as we can," Bregnard said.

Bregnard and Bates have a combined 54 years of experience in the foundry business and said that should help them make the foundry a profitable venture.

"You need experience to run a business profitably," Bates, who began his career with Rockwell International, said.

"We will live here, and run the foundry. That is the only way you can run a business," Bregnard stated.

According to the new owners, the new foundry, known as Eagle Iron Inc., will continue to handle much of the business from KimRay. However, they do plan to diversify.

"KimRay contacted their customers and told them that operations would be continuing. KimRay, with whom the majority of the work was for, will continue to stay with us. But we will also be bringing in new work," Bregnard said. "We want to start out slow. We need to get things started and running smoothly. Sometimes too much business can be as bad as not having enough when you are not ready."

"We plan to diversify. KimRay and the oil field will still be a major part of our work, but we hope to expand. We would like to have 50-50 split with the oil patch and non-oil field work," Bregnard said.

The new owner said one of the major plans for the foundry is to expand their market area.

"We will increase our market radius. Currently, that is approximately 150 miles. We will expand that," he said.

"This is exciting for us. This is an opportunity that Mark and I have looked forward to. We have worked for other people and this gives us an opportunity to own our own business," Bregnard said.

The owners said they have already talked with several former employees and said they will be given first opportuntity at all openings at the foundry.

Interviews will be held on Thursday afternoon beginning at 1 p.m. for supervisors; 2:30 p.m. for the cleaning room personnel and maintenance persons will also be interviewed on Thursday.

Interviews will continue on Friday for all other personnel beginning at 10 a.m., according to Bates and Bregnard.

"We are looking forward to the opportunity to work and live in Blackwell," the two said.

According to Bregnard, Eagle Iron became a reality in part because a local customer of the foundry had approached them about buying the facility.

"Rod Wise was instrumental in getting us to Blackwell," Bregnard said of the owner of Blackwell's Crow Manufacturing.

KimRay announced on Oct. 28 they were planning to close the foundry leaving 55 people without jobs. The foundry had an estimated payroll of $1.2 million.

KimRay had purchased the foundry in 1985 and had installed more than $1.6 million in new equipment.

Brief news and personals

A RECEPTION for Joe and Carol Dwinnell is planned in the social rooms of the First Presbyterian Church today (Sunday) about 12:15 p.m. after the morning worship service. Rev. Dwinnell has accepted a pastorate in the Dallas area. Friends of the family are invited to attend.

OPEN HOUSE Sunday, 2-4 p.m., 1122 South 3rd. Carla Sandy, Weigle's Agency. (Adv.)

IF YOU are interested in taking the lifeguard training or water safety instructor courses, contact the Red Cross office in Blackwell, 1313 West Ferguson, before April 10. The phone is 363-1738. The classes will be held at Northern Oklahoma College.

DON'T FORGET to fund your IRA for tax year 1988. Contact Joann Cartwright at the First National Bank for details. (Adv.)

VFW AUXILIARY to Post 2855 will have election of officers in the meeting Tuesday, April 4, at 7:30 p.m.

HAPPY BIRTHDAY to the ever youthful Majid, Saturday, April 1. No foolin'! Your breakfast and lunch bunch! (Adv.)

REV. GEROLD Bryant of Lawton will lead a revival at El Bethel Pentecostal Church of God, 1100 N. 13th, starting tonight (Sunday) at 6 p.m. and continuing Monday through Thursday at 7 p.m. The pastor invites everyone to attend.

BLACKWELL BASEBALL Board will hold a coaches' meeting Monday at 6 p.m. in the training room at the police department. Anyone who wants to be a coach, or has signed up to coach a team during the 1989 baseball season, needs to attend this very important meeting, according to Judy Yunker, recreation director.

FREE BLOOD pressure tests will be taken at the Senior Citizens Center in Blackwell on Monday from 10 to 11 a.m. by Red Cross volunteer Diatra Williamson.

MT. OLIVE Cemetery Association will meet at 10 a.m. Saturday, April 8, in the Clyde Co-op (Johnston building) at Nardin.

PAST MATRONS Club of OES Chapter 51 will meet at 7 p.m. Monday in the Masonic temple dining room. Earleine Harman is in charge of the program.

BLACKWELL 4-H and FFA Boosters will have election of officers in the meeting at 7 p.m. Tuesday, April 4, in the ag room at Blackwell High School.

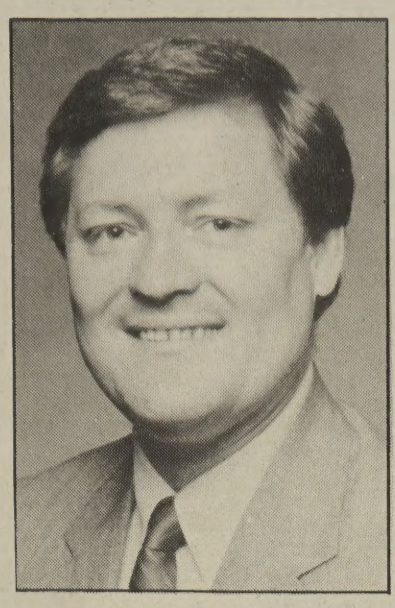
Kay Electric meeting Friday



DR. WAYNE MATTHEWS

On Friday, April 7, Kay Electric Cooperative will host its 52nd annual meeting at the Blackwell High School auditorium, 1524 South Main, (across the street from Braum's).

Kay Electric serves an area that covers more than 2,000 square miles in all or parts of Kay, Grant, Garfield, Noble and Osage counties.

All Kay Electric members and their families are invited to attend the meeting, which will begin with a free meal and registration at 5:30 p.m. The business session will start at 7 p.m.

The featured speaker, Dr. Wayne Matthews, an assistant professor in Family Relations at Oklahoma State University, will present an enlightening program. Dr. Matthews' sense of humor, personal warmth and sensitivity to the needs of people evoke praise from audiences wherever he goes.

The Oklahoma Christian College Chamber Singers will provide musical entertainment for the evening. Boasting an extremely varied repertoire, they perform Broadway show tunes, opera and vocal jazz with equal ease.

In conjunction with the KEC annual meeting, Kay Electric Co-op, Blackwell Regional Hospital and Kay County Extension Homemakers are sponsoring a "Health Fair" for Kay Electric members at the Kay County Fairgrounds from 1-5:30 p.m.

"Beginning Prevention — The Key to Healthy Living" is this year's theme.

For a small fee a cholesterol screening and—or blood sugar check can be ran. Blood pressure checks and a height and weight analysis are among other services available at the Health Fair.

Several new interests will be added at the Health Fair this year. Blackwell Regional Hospital will have a special booth called "CritiKid."

This booth will introduce a child-adult health and safety program consisting of a medical-ID card-shoe tag, which provides a microfilm strip with the child's name, address, vital medical history information (including allergies and special conditions, emergency contact information and an optional medical release form). The strip is laminated and hole-punched for a shoelace or velcro strap to be drawn through and secured.

Blackwell merchants are geared up for Kay's annual meeting, and are offering KEC members special merchandise discounts (1-5:30 p.m.), as well as registration for valuable door prizes to be given away at the annual meeting.

After the free meal, a short business session will be held with three trustees to be elected from Districts 7, 8 and 9 for 3-year terms.

Candidates, nominated at district meetings, are the following — District 7: W. Kent McAninch and McDaniel Wall, both of Tonkawa; District 8: Ray Schiltz and Dennis Lebeda, both of Ponca City; District 9: J.A. Megenity and Gene Sanders, both of Red Rock.

Trustees filling unexpired terms are John B. Olsen, Newkirk, District 1; Otto Kahle, Newkirk, District 2; J. W. (Bill) McKinzie, Blackwell, District 3; Carl J. Hohmann, Deer Creek, District 4; Wayne Williamson, Medford, District 5, and Robert Glen, Hunter, District 6.

Kay Electric members attending will receive a free attendance gift and will be eligible for more than $1,000 worth of prize drawings, which include grand prizes of two video recorders (VCRs) and a 19-inch color television.

A free movie and nursery are provided for children. A drawing will be held for eligible children, with the prize being choice of a tape player or a Nintendo Entertainment System.

City Charter election Tuesday

By CHARLES ABBOTT
J-T Staff Writer

Voters will go to the polls Tuesday to vote on the proposed City Charter revisions for the city of Blackwell. Polls will be open from 7 a.m. to 7 p.m.

Originally the Charter Revision Committee, chaired by attorney Dan McClung, recommended going from a three-member to five-member council.

A town meeting was held on the proposed changes and at that meeting it was decided to keep the three-member commission for the present. They would become council members under the new charter revisions, if approved.

Here are other proposed major changes in the charter:

— Provide for a pure council-manager type of government. The present charter is a hybrid between an aldermanic and council-manager form of government in which the role of the commissioners and manager are not well-defined.

— Provide that in an election where one candidate gets a majority of the votes in the primary, a runoff is not required. The present charter requires a runoff any time more than two candidates file.

— Provide that if a person wishes to voice a complaint to the city council, he must present his complaint as an agenda item. This will bring the council meetings within the Open Meeting Law.

— Purchase and sale of property: A new charter would provide that the sale or purchase of property of a value of more than $25,000 would be by special non-emergency ordinance.

Notice would be given to the public of a person's right to file an initiative petition to bring the purchase or sale to a vote of the people.

A lengthy question and answer format of information about the new charter was published in Thursday's Journal-Tribune.

The charter now in use was adopted in 1917, although there have been amendments over the years.

The charter is the law of the city. The proposed revisions have drawn the praise of city officials.

Mayor Vernon Steelmon said it boils down to a question of what the people are satisfied with.

If people are satisfied with the way the city is governed, vote against it. If not satisfied with the charter, vote to change.

Steelmon said "The people have to live with it," and it's a voice of the people, who by their vote will decide how Blackwell is governed.

Commissioner Jim Bellah voiced his belief that the revised charter should be approved.

"A lot of work has gone into it," he said, "and it's a long time overdue (revisions)."

Commissioner Gene Braly could not be reached for comment Saturday morning.

Paying pork for taxes

CHESWICK, Pa. (AP) — Farmer Richard Panza doesn't understand why local tax officials won't let him pay back taxes with a little piggy that has yet to go to market.

Panza said he'll try to pay the debt again Tuesday by offering his pig, Art, to the city.

Earlier this week, Panza donned his overalls, placed Art in a pickup truck and parked it outside the office of District Magistrate Art Sabulsky.

"Them pigs are my net profit," he told the magistrate, insisting it's legal to pay with pork. A Harmar Township ordinance allows him to pay with his income, which happens to be pigs, he said.

Sabulsky ordered Panza to release his personal records so tax collectors could calculate how much he owes the township and the area school district.

"I've been fighting this for 13 years," Panza said. "First of all, they're being a pig about all these taxes. You've got to pay property tax, school tax, township tax, and then they want to tax your net profit. There's nothing left for you."

Sabulsky wouldn't say whether he'll accept the pig as payment.

Wile promo

The promotion of Roy H. Wile to senior vice president & cashier has been announced by Security Bank and Trust Company, Blackwell.

Wile has been with the bank for the past five years serving as vice president and cashier. Prior bank employment was with Exchange National Bank of Ardmore and Liberty National Bank of Oklahoma City. He also was previously employed as office manager of Bell Telephone Company in Oklahoma City.

Acme-Blackwell sold to Bartlesville pair

By TERRY GROOVER
J-T Managing Editor

"Things moved very quickly for us. Two weeks ago, we didn't think we were in the running," said Adrian L. Bregnard, co-owner of Eagle Iron Inc. But today, he and partner Marcus P. Bates, both of Bartlesville, are the owners of what was Acme-Blackwell.

The pair officially purchased the gray-ductile iron foundry, including land, buildings and equipment from KimRay Inc. of Oklahoma City on Tuesday morning.

Acme-Blackwell was closed on Dec. 20 by KimRay, who cited the foundry's strain on the parent company's finances for the decision. Acme's closing left more than 50 employees out of work.

However, Bregnard said many of those employees will be rehired by Eagle Iron and the company is expecting to be in operation by next week and to be pouring iron by the end of the week.

"We will start with around 25 or 30 employees and will grow as fast as conditions will allow. We hope to be at around 55 in a matter of months. We will get to the levels as quickly as we can," Bregnard said.

Bregnard and Bates have a combined 54 years of experience in the foundry business and said that should help them make the foundry a profitable venture.

"You need experience to run a business profitably," Bates, who began his career with Rockwell International, said.

"We will live here, and run the foundry. That is the only way you can run a business," Bregnard stated.

According to the new owners, the new foundry, known as Eagle Iron Inc., will continue to handle much of the business from KimRay. However, they do plan to diversify.

"KimRay contacted their customers and told them that operations would be continuing. KimRay, with whom the majority of the work was for, will continue to stay with us. But we will also be bringing in new work," Bregnard said. "We want to start out slow. We need to get things started and running smoothly. Sometimes too much business can be as bad as not having enough when you are not ready."

"We plan to diversify. KimRay and the oil field will still be a major part of our work, but we hope to expand. We would like to have 50-50 split with the oil patch and non-oil field work," Bregnard said.

The new owner said one of the major plans for the foundry is to expand their market area.

"We will increase our market radius. Currently, that is approximately 150 miles. We will expand that," he said.

"This is exciting for us. This is an opportunity that Mark and I have looked forward to. We have worked for other people and this gives us an opportunity to own our own business," Bregnard said.

The owners said they have already talked with several former employees and said they will be given first opportuntity at all openings at the foundry.

Interviews will be held on Thursday afternoon beginning at 1 p.m. for supervisors; 2:30 p.m. for the cleaning room personnel and maintenance persons will also be interviewed on Thursday.

Interviews will continue on Friday for all other personnel beginning at 10 a.m., according to Bates and Bregnard.

"We are looking forward to the opportunity to work and live in Blackwell," the two said.

According to Bregnard, Eagle Iron became a reality in part because a local customer of the foundry had approached them about buying the facility.

"Rod Wise was instrumental in getting us to Blackwell," Bregnard said of the owner of Blackwell's Crow Manufacturing.

KimRay announced on Oct. 28 they were planning to close the foundry leaving 55 people without jobs. The foundry had an estimated payroll of $1.2 million.

KimRay had purchased the foundry in 1985 and had installed more than $1.6 million in new equipment.

SOLD — The sign for Acme-Blackwell will soon be replaced with Eagle Iron Inc. The gray-ductile iron foundry was purchased on Tuesday by Adrian Bregnard and Marcus P. Bates of Bartlesville from KimRay Inc. The company plans to begin interviewing personnel on Thursday afternoon and then again on Friday. KimRay closed the foundry on Dec. 20, leaving more than 50 people without jobs. (J-T photo TLG)

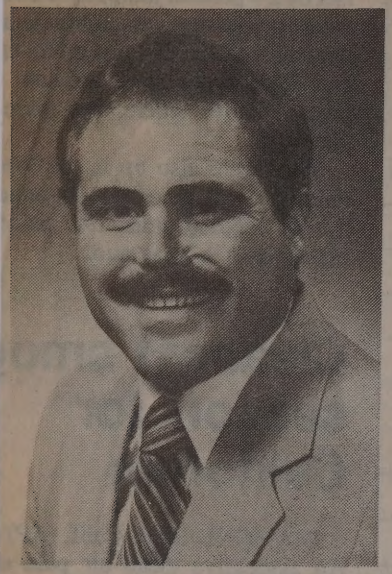
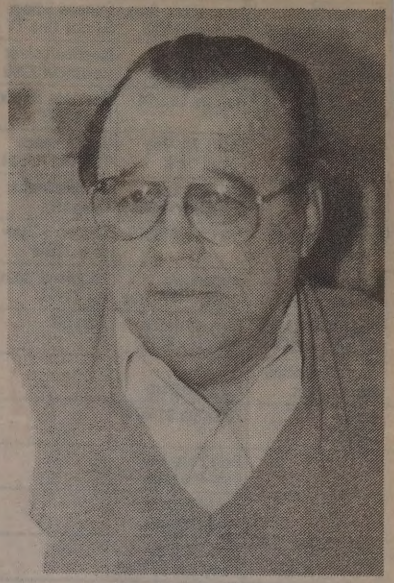
Foundry sale good start to a new year for Blackwell



RICH CANTILLON



JOE DICKINSON

By TERRY GROOVER
J-T Managing Editor

The news that Acme-Blackwell had officially sold and would return to operation during the second week of January brought smiles to the faces of several local officials Tuesday afternoon.

Officials with KimRay Inc. and Eagle Iron Inc. signed papers early Tuesday morning in Oklahoma City transferring ownership of the gray-ductile iron foundry to Eagle Iron of Bartlesville.

The foundry was officially closed on Dec. 20, putting more than 50 area residents out of work. KimRay had cited financial strains of Acme-Blackwell as the reason for the closing.

Rich Cantillon, who ended his term as president of the Blackwell Chamber of Commerce on Tuesday, said he was very excited about the purchase of Acme-Blackwell.

"It is exciting. At least it is not the closing of a company. We're not putting a lot of people out of work," Cantillon said. "There won't be an interruption in one of Blackwell's leading companies.

"We don't know what the future is, but it is still exciting. Things look a lot more optimistic," he said.

Cantillon said one area which highlights the selling of the foundry was the fact that the city got involved in looking for a new owner after KimRay announced its plans.

"Blackwell got involved in it. The industrial authority got involved and the city manager. Instead of leaving it up only to the sellers, there were a lot of people who were involved," Cantillon said.

Meanwhile, City Manager Joe Dickinson said the purchase of Acme-Blackwell is very encouraging for the community.

"This is very encouraging. I feel very positive about this. It retains the jobs, plus it continues the contributions of wages being paid. It helps the economy locally," Dickinson said.

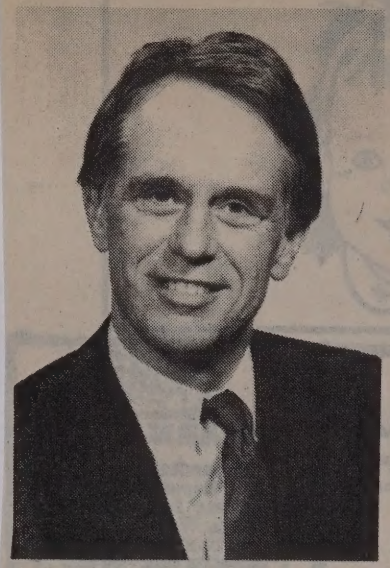
The city manager said he was not surprised the foundry sold as quickly as it did, because a number of people who were working to find a buyer.

"There were numerous people within the community who made contributions in contacting potential buyers. The financial institutions worked vigorously with any potential buyer, and the city staff worked with numerous experts to look at different aspects and make determinations for the buyers," he said.

(Please see REAX, P8)

Reax

Continued from P1



WILLIAM RODGERS

Also, among the first to begin helping with the search for a new buyer and trying to help with the financial aspects was William Rodgers, chairman of the board for Security Bank and Trust.

"I am very happy about this. It saves quite a few jobs and will be very positive for Blackwell. I look forward to a very successful operation," Rodgers said.

"I don't know the number of jobs they will have, but I know it will be considerable. It is very good that we will not experience the loss of income in the community. It is very significant that we will be able to save 30 or 40 jobs. I feel this is a win-win situation," Rodgers said.

According to the bank official, KimRay worked very quickly to try to find a buyer for the foundry and that may have helped both his company and the former employees.

"I felt KimRay was actively soliciting and working with potential buyers. They were interested in getting the jobs saved and if they were going to do that, it would have to happen rather quickly," he said. "KimRay showed a real interest in saving the jobs over terminating the operation."

KimRay announced in late September their plans to close the 65-year-old foundry due to declining revenues. The company had said from the outset they would strive to find a buyer for the facility.

Contacted at his office in Oklahoma City Tuesday afternoon following the signing of the papers, Tom Hill, who had been president of Acme-Blackwell, said he wished the new owners luck in their venture.

KimRay is expected to continue to be a customer of Acme-Blackwell.

BACK IN OPERATION — This building, part of the former Acme-Blackwell foundry, will return to operation next week under a new name, Eagle Iron Inc. The foundry was purchased Tuesday by two Bartlesville men. (J-T photo TLG)

RIBBON CUTTING — Officials from the Blackwell Chamber of Commerce officially welcomed Eagle Iron, Inc., to Blackwell on Thursday. Joining Adrian Bregnard and Marcus Bates, owners of Eagle Iron, in the ribbon cutting were Connie Shields and Carla Sandy of the chamber, and Charles Tallan, a KimRay representative. (J-T photo LL)

ACME TODAY | Blackwell, Oklahoma | JULY-AUGUST, 1975

KIMRAY, INC.

It is always very gratifying to see a small group of people take an idea recognize it's potential, conceive the plan for its development, manufacture and marketing, and then put the plan into action and make things go. Just such a company is Kimray, Inc., of Oklahoma City.

Kimray was housed at the time of their inception, in a small 2000 square foot building that was once a grocery store in Britton, Oklahoma. Today they are a large manufacturing facility, taking up 62000 square feet of floor space in modern facilities in the Santa Fe Industrial district in Oklahoma City.

In the beginning, all parts for Kimray were manufactured by others. Acme Foundry was one of their first suppliers, and some of you who were around here 27 years ago may recognize the 3" gas valve body, shown elsewhere, which Acme not only cast, but also did the machine work on the casting.

Gradually, Kimray acquired a manufacturing capability and now do all their own machining and manufacturing operations, except standard hardware and electronic components.

From the beginning in what was Britton, Oklahoma, Kimray now has 147 employees manufacturing several hundred different types of control units, the latest of which are electronic and will enter the field of automation of oil and gas production.

Kimray's original purpose was to introduce into the oil field a simplified version of controls which would bridge the gap between the cheap, purely mechanical devices and the more exotic controls used in petro-chemical processing.

The company started with two authorized distributors and service centers. There are now 35 serving all of the oil producing areas in the world except those behind the various "curtains." These distributors of Kimray played an important part in the introduction of the "new line" of equipment into the oil fields, particularly along the Gulf Coast.

In 1951 a line of high pressure (4000 lb.) motor valves was introduced. Again in 1957 Kimray introduced a line of glycol pumps for circulation of glycol in dehydration processes. The pumps together with the high pressure and low pressure group of valves constitutes Kimray's "bread and butter."

In 1958, Kimray branched into medical items such as heart-lung machine, blood pumps, surfactometers, canulae, vaccuum regulators, blood fittings, walking blood pressure recorders, etc. **(A KIMRAY HEART-LUNG MACHINE WAS UTILIZED BY OUR OWN CHUCK EUDAILY WHEN HE HAD HIS OPEN HEART SURGERY).**

Kimray also manufactures a few instruments and parts for industry, and specialized testing equipment for gas wells.

Since it's inception, Acme Foundry has been Kimray's number one source for Gray Iron castings. Year after year they are one of the top 5 or 6 of Acme's customers in pounds of castings shipped. Mr. Bob Boyd, the executive vice president, says I may quote him in respect to the quality of our product. He says, "Acme scrap rate is almost non existant and certainly the lowest of any foundry they have done business with."

It is our observation in the many visits to their plant and the many business transactions over the past number of years that Kimray is one of the most effectively managed companies in industry. This, together with

(Continued on Page 3)

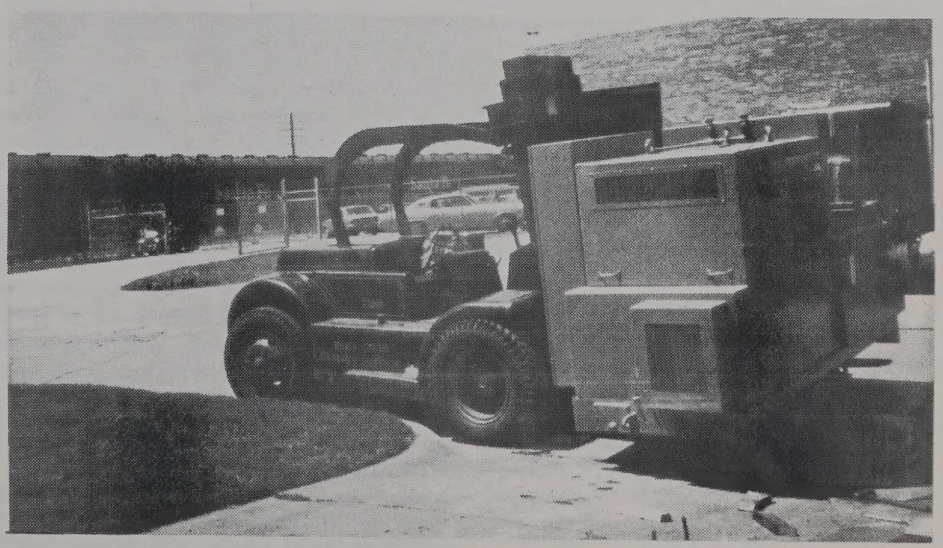
THE HUNTER

Autumn is the time of the hunter. With the coming of fall weather, some 200 million Americans make ready to take to the fields in pursuit of many species of wild game.

Today's hunter may go afield for any number of reasons, but, regardless of individual motivation, most sportsmen are more concerned with the future of wildlife than the present contents of their game bags. The National Shooting Sports Foundation has compiled statistical evidence that hunters have done more to support the cause of practical conservation than any other group in the country. Here are some surprising facts about the hunters.

*Through a self-imposed tax on sporting arms and ammunition, hunters and shooters have, in the last 30 years, provided nearly half a billion dollars for wildlife management. These taxes continue to add over $40 million annually to conservation funding.

*Through the purchase of hunting licenses and permits, today's hunters provide more than $105 million a year to support the 50 state fish and game departments.



One of the 5 new Warner Swasey Automatic Chucking Lathes just being received and being moved into the main plant at Kimray.

PERSONALS

Bill Gates and family during vacation enjoyed sightseeing and visiting many interesting places in California.

Kent Armstrong spent several days in Colorado. Said he would like to go back again if his mother would let him.

Cecil Sodowsky and wife toured many scenic places while vacationing in Colorado. They also did some hiking and took many beautiful scenic pictures.

Henry Pendergraft traveled through several states on his way to Florida on vacation. Said he certainly had an enjoyable trip.

Arlie Bray and family visited many interesting places in Missouri.

Art DeCamp and wife spent several days fishing on Grand Lake and remarked about the good luck he had.

Kenneth Epperly toured Colorado and said the state was very scenic.

Butch Scott and wife got to do some camping and Butch even got to do a little hunting.

Rumor has it that Glen McCleary got 20 bushels of green beans out of only two rows. (How long were the rows, Glen).

Understand Raymond Burnett and friend caught 14 bass all of which were in the one pound class. He was using artificial lures.

Don Stafford brought in a nice channel cat which weighed 3 pounds.

Chuck Eudaily caught around 20 bass, none very big, but said he sure enjoyed catching them.

Heard Bill Gates finally got his trailer hitch put on the right way and now he claims his trailer pulls real well.

Paul Burris brought in a 25 pound flathead catfish on rod and reel. He was using perch for bait.

Understand Kent Armstrong let his dad mow the yard. Thought that was real nice of him!

Norman Brown has been catching several nice catfish on limb lines.

Hear tell Carroll Brittain grew a 15 pound canteloupe!

WANTED TO BUY

Anyone that has an Early American style cradle and a treadle sewing machine stand that is for sale contact Vella White or call 363-4772.

FOR SALE

Crash bar for a Honda 500. See Richard Staten.

Pictured in the foreground are the bat boys: Troy Miller on the left and Brent LaBlue.

CASTING DEFECTS

Part IV

SHRINKAGE

Shrinkage is a void space in the casting or a depression on the casting surface. It generally has a jagged or spongy appearance and may at times be mistaken for either porosity or hot tears. Shrinkage cavities are usually voids associated with the dendritic structure that is present during the last stages of solidification. Porosity is primarily round or oval voids in a large range of sizes and with smooth surfaces. These voids are formed during solidification by the evolution of gas which is dissolved in the molten metal.

Causes Shrinkage is a defect resulting from the contraction of fluid metal as it freezes. Unless additional metal is provided or graphitization is controlled so as to fill up the spaces between the grains of iron, void spaces will be present upon the complete solidification of cast iron. Thus, most shrinkage defects can be traced to poor planning of gates and risers or to the metal composition.

Remedies Castings should be designed to avoid abrupt changes in section size, isolated heavy sections, exceptionally heavy fillets, or a lack of fillets —anything that will cause hot spots to be formed. Gates and risers should promote directional as well as progressive solidification. Risers and contacts must be large enough and so placed as to provide good feeding. Chills, cores and padding, when strategically located, are very beneficial for controlling solidification.

To insure against shrinkage, proper metal composition must be specified and produced. To do this the correct silicon-carbon ratio, total carbon, phosphorous content, alloying elements, and innoculation procedures must be determined and maintained. Pouring practice also has an influence on the formation of shrinkage. When metal is poured at too low a temperature, it may freeze in the risers and not feed the casting. On the other hand, if the metal is poured at excessive temperatures the total amount of contraction will be larger possibly rendering feeding facilities inadequate. Considerable use is made of exothermic* compounds, either included in the sand which forms the risers or as a topping. These compounds keep the metal fluid for a longer period of time, allowing less metal to perform the same feeding function.

SIGNS OF OUR TIMES . . .

Americans must be getting stronger. Twenty years ago it took two adults to carry ten dollars worth of groceries. Today . . . a child can do it.

ACME TODAY

ACME TODAY | Blackwell, Oklahoma | DECEMBER, 1975 - JANUARY, 1976

Our 50th Anniversary

This year as the nation enters its 200th year of existence, Acme Foundry and Machine Co., Inc., enters its 50th year.

Noted for its quality and reliability from the very beginning a half century ago, Acme Foundry has developed into one of the leading foundries in the Southwest.

Like our nation which has had some rocky roads to travel, Acme has had some stormy times, a fire in 1945, a tornado in 1955, but overall the journey has been good and through the years has provided very stable emplyoyment for many families.

There have been many changes in foundry production techniques over the past 50 years. We believe the next several years will bring forth changes more rapidly than ever.

We are very optimistic abou the future of Acme Foundry, and are backing up our optimism and hope with plans for expansion and modernization. We are anticipating the future with much enthusiasm.

EARLY HISTORY OF THE CASTING PROCESS

Metal casting is one of the oldest known metal forming processes. Present day archaeologists and geologists have made discoveries which indicate that castings were first produced about 4000 B.C.

Copper appears to be one of the first metals reduced from its ore and cast. The union between the reduction of an ore and the mechanics of casting made possible the fabrication and more rapid production of intricate shapes. Thus early man benefited from improved utensile, agricultural implements, and weapons with which to better combat the forces of men and nature. History provides ample evidence of the favorable correlation between the ability to cast metal and the cultural development of society.

Bronze, an alloy of copper and tin, was also cast at a very early date.

A close examination of the fine de-

(Continued on Page 2)

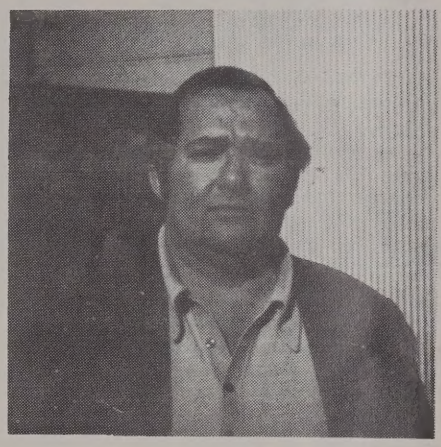
FOUNDRY SUPERINTENDENT

Lew Markow, a twenty year veteran of the foundry industry, has joined Acme Foundry as Foundry Superintendent. He comes to us from Mankato, Miinnesota where he was employed by the Dotson Company as General Superintendent of two Gray & Ductile Iron Foundries, and a ferrous foundry. Together, the foundries employed over 250 people.

Markow is a graduate of the University of Illinois where he earned a B. S. Degree in Metallurgical Engineering. He has worked as Chief Metallurgist, along with other foundry related duties, for Fairbanks Morse and Co. in Beloit, Wisconsin, and has had experience in various foundries with nearly all types of molding facilities including floor molding, cope and drag and squeezer work, and with the Hunter Automatic. He is familiar with both cupola and electric melting and with air set molding sands as well as green sands and with CO2 and shell core sands as well as oil sand and air set core production.

Six of Lew's 20 years in the industry were with Meehanite Metals Corporation as a Consulting Engineer and Foundry Service Representative. (Acme is now served by Meehanite Engineers which resulted from the merger of Sorbo-Mat Engineers into the Meehanite Organization when Harry Kessler, owner of Sorbo-Mat, purchased Meehanite.)

Markow is a veteran of Korean War years, though served this time mostly



LEW MARKOW

in Europe. He was separated from the service as a first lieutenant.

Lew's family, consisting of his wife, Geraldine, and two boys and two girls, ranging in age from 9 to 20, will join him in Blackwell as soon as possible after this school year.

We are very pleased to welcome Lew to Acme Foundry.

In accordance with the Civil Rights Act of 1964 and Executive Order No. 11246, it is the policy of Acme Foundry & Machine Co., Inc., to afford equal opportunity for employment to all individuals regardless of race, color, religion, sex, national origin, age or physical limitation.

We at Acme Foundry feel morally bound to this policy by virtue of the fact that adherence to the principles involved is the only acceptable American Way of Life.

FOUNDRYMEN SIGNERS OF DECLARATION OF INDEPENDENCE

Seven men who signed the Declaration of Independence were foundrymen. They were: **James Wilson, Union Township, Pennsylvania. Stephen Hopkins, Pawtuxent River, Rhode Island. George Ross, West Manheim Township, Pennsylvania. Charles Carroll, Carrolton, Maryland. George Taylor, Burks County, Pennsylvania. James Smith, York County, Pennsylvania,** and **Philip Livingston, Columbia County, New York.**

Other foundrymen we read of in the history of those times were Nathaniel Green, Ethan Allen and Paul Revere.

In 1723 there was a law prohibiting the sale of liquor within 3 miles of any foundry furnace. It is reported that 1 gal. of whisky and a gallon of beer were consumed for every ton of iron produced.

"Free speech does not live many hours after free industry and free commerce die."—Herbert Hoover.

HUGO RESERVOIR

By LAWRENCE SELF

This reservoir located in the southeastern corner of Oklahoma could be one of the hottest fishing lakes this year. This new impoundment has 13,250 acres of fishing water.

Stocking began in April 1973 with the introduction of 662,815 native largemouth, 10,750 five-inch Florida largemouth, 3,542,139 walleye, 6,708,077 channel catfish and 12,000 threadfin shad. The shad were introduced to provide forage for the well-established native fish and the thousands that were introduced.

With additional stocking planned, you can imagine what kind of super fishing hole this is shaping up to be. Hugo is located further south than any other lake in Oklahoma, and enjoys a longer period of warm weather.

Fishing pressure has been slow to develop on this reservoir. This has allowed the stocked fingerlings and native fish to become well established. By this spring, six public use areas and paved boat ramps are scheduled to open.

The most popular rods are medium-action and worm sticks. Currently 17 and 20 pound test monofilament are favorites. Fast-retrieve reels and open-face spinners are popular. The grape worms seem to produce with good results. Your spinner and crank baits should work with a good catch.

Most man-made lakes seem to peak after their third year and level off. By Hugo's fifth birthday, the Clayton Lake is expected to be built. This will raise the pool elevation eight feet, increasing the size of the Hugo Reservoir.

The proposed Tuskahoma Lake, above the Clayton site, when built would raise Hugo another five feet giving it a new lease on life. For the next 15 years Hugo could be the "hottest" bass lake in the Southwest.

We're All in the Same Boat.

Let's Pull Together!

EARLY HISTORY OF THE CASTING PROCESS

Continued From Page 1)

tails and lack of a parting line indicates the "lost-wax" process was used in producing castings in China during the Chou Dynasty, 1112-225 B.C.

The first iron castings are believed to have been made by the Chinese around 800-700 B.C.

One of the early problems of casting was the melting and refining of metals. The first furnaces were constructed in hollow tree trunks, lined with refractory material, and furnished with air from crudely formed bellows. Foot and hand power were used to furnish air. Later improvements included the application of water power and steam power, followed by the more recent applications of electrical power.

Following are some of the more important historical high spots of the metal casting industry.

The earliest sand molds have been traced to 645 B.C.

Early cast products were spears, knives, ornaments and cooking utensils.

John Wilkinson developed the cupola (stationary bottom type) in England in 1794.

Coke was first produced in 1730 by Abraham Darby of Coalbrookdale, England.

By 1800 cast iron led all cast metals in general importance and tonnage produced, a position it still holds.

Paul Revere owned and operated a bell and cannon foundry in Boston.

In 1815 the cupola was introduced in the United States and in 1850, an unknown American invented the "drop bottom."

Sir William Siemens developed an electric arc furnace in 1878. Such a furnace was not installed in U. S. until 1906 in Syracuse, N. Y.

Induction furnaces were developed in Sweden and first introduced in the United States in 1930.

The polishing, etching and microscopic examinaion of metal surfaces for metallurgical analysis was first developed by Henry C. Sorby of Sheffield, England in 1863.

The safety foundry ladle, the tilt of which was controlled by gears, was developed by James Nasmythe in 1867.

The first muller for sand conditioning appeared in 1912.

Sand testing and control was developed in 1920.

This cast iron vase with cast handles has been traced to the Han Dynasty in China approximately 200 B.C. to 220 A.D.

ACME ANNOUNCES RECENT PROMOTIONS

Lawrence Self — Superintendent of Core Departments.

Kenneth Epperly — Foreman of Shell Core Department.

Raymond Burnett — Assistant Foreman in Oil Sand Department.

The company's lead-men are:

Arthur Henricks — Cupola.

Norman Brown—Pour-Off and Floating Crew.

Ernie Laughlin — Yard and Cupola.

Eugene Sawyer — Maintenance Department.

Henry Pendergraft — Oil Sand Core Department.

The first iron casting made in America was the "Saugus Pot" made in 1642 at Saugus, Mass. (10 miles north of Boston).

A judge asked a defendant why he struck his wife. The man replied, "Her back was turned, the broom was handy, and the back door was open."—Quote

HUNTING AND FISHING LICENSE COST MORE

Those of you who have not purchased this years license are in for a surprise. Resident hunting and fishing licenses will cost you $5.00 each or $9.00 for the combination license.

Non-residents will now pay $30.00 for a hunting license. An annual non-resident fishing license costs $9.25 and 10-day permits will sell for $4.75.

"I see you've met our new foreman."

CASTING DEFECTS

Seventh of Series

Surface Finish Rough surface finish is obviously a lack of surface smoothness in the cast condition. This condition is analogous to differences in grades of sand paper and, therefore, invites this comparison as a means of surface measurement.

Causes Rough surfaces can usally be traced to the sand used, the molding practice, or the metal pressure and fluidity. However, pattern equipment, flask equipment, rigging, gating and risering also play minor roles in the occurrence of this defect.

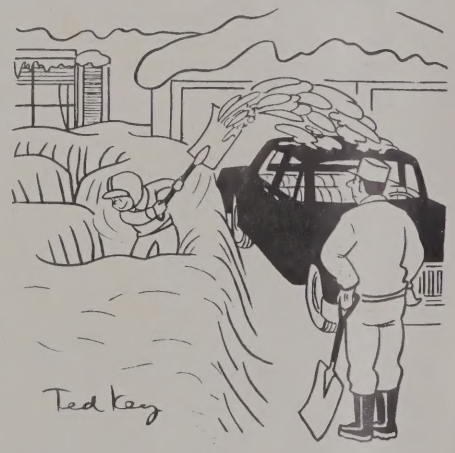
Remedies Sand of too high or too low moisture content, or sand which is prepared improperly, must be avoided if a good surface finish is to be produced. Other necessary sand properties include sufficient hot strength, the correct grain distribution and fineness, good flowability, proper permeability, low stickiness, and the proper sintering points in the sand mix. Molders who use excessive amounts of parting agents, do not clean their patterns thoroughly before using them, or soft ram their molds, contribute considerably to this defect. Their negligence is further increased when they do not riddle lumpy sand. Or a well-made mold can be rendered conducive to producing a rough surface by improper mold finishing, gate cutting, or washing and coating procedures.

Excessive melting temperatures and metal pressures will aggravate any borderline conditions.

Pattern equipment should not have sharp or near sharp corners, deep pockets, or rough surfaces. Flask bars and other reinforcing materials must not interfere with ramming. To aid in the control of rough surfaces, gating and risering should be planned so that molten metal and sand will remain in contact for the shortest length of time possible, i. e., iron should be gotten into the mold as fast as possible by using proper gating systems.

HOW COME?

It's strange that so many smart people work for such ignorant bosses.—Gene Yasenak



It isn't being busy that counts - it's what you get done.

Poor Kid

He was worried about his little daughter getting up ill in the middle of the night. So he consulted one of his know-it-all friends.

"Does she drink milk before she goes to sleep?"

"Yes."

"That's the trouble," said the wise guy. "If you feed a child milk before bedtime, she goes to sleep and tosses from side to side, milk turns to cheese, cheese turns to butter, butter turns to fat, fat turns to sugar, sugar turns to alcohol, and, the first thing you know, the kid wakes up with a hangover."

"I haven't the heart to tell Cecil we're converting to metric. He hasn't mastered the English system yet."

OKLAHOMA MAPS ARE AVAILABLE TO SPORTSMEN

Several good maps are available to Oklahoma sportsmen at little or no cost.

Maps showing public hunting lands, campsites and boat-launching ramps at almost all of the state's large reservoirs are available free from the U. S. Army Corps of Engineers, Dept. OL, Tulsa District Office, P. O. Box 61, Tulsa, Okla., 74102.

An Atlas of the 600,000 acres of public hunting land in Oklahoma is available by mail for 25c. Ask for "Public Hunting Lands of Oklahoma" from the Department of Wildlife Conservation, Dept. OL, 1801 N. Lincoln, Oklahoma City, Okla., 73105. Copies are free if picked up at department headquarters.

PERSONALS

Glad to hear Cecil Sodowsky finally got some brakes on his VW. Now he stops at every corner to see how good they work.

Jack Miller was working on putting a primitive firearm together a few weeks back. Understand it came out real nice. Have not heard if he has fired it yet.

Steven Branden is the name Vella White and husband Jerry picked for their newborn son born January 6 at 10:00 a.m. in Blackwell General. Steven weighed 8 lbs. 4½ ozs. Mother and son are now at home and doing fine.

Was told Art Decamp likes to bowl under another name. Anything to it Art?

LeRoy Hoose had a hole problem a few weeks ago on a hunting trip. It seems he stepped in one and hurt his foot. He was off work for a few days, but is back on the job now. Glad to see him back.

Heard Roy Hurst likes to bowl when he has had a few drinks. Was told if he can't see the pins he bowls a much higher game! Hang in there Roy.

Daniel Williams and wife Joyce are the proud parents of this year's New Years Baby. He was born Jaunary 2 at 5:24 a.m. in Blackwell General Hospital. They chose the name Lloyd Daniel for their 6 lb. 3 oz. son. Mother and son are both doing fine.

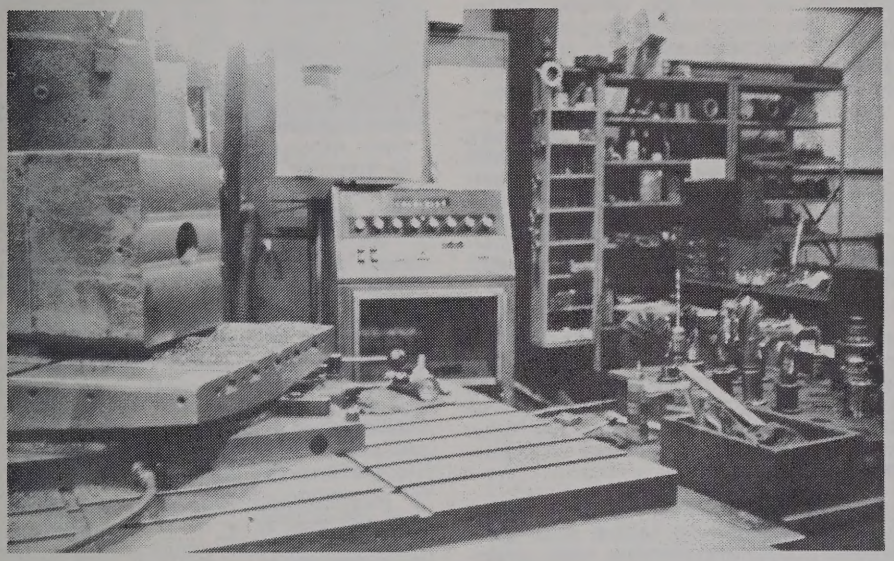
Found out Judd Matthes is a carpenter, his fondness is in making doll houses and doll furniture.

Kurt Jacoy says that streaking is just a way of showing you paid your income tax.—Hugh Park, Atlanta Journal.

ACME TODAY

ACME TODAY | Blackwell, Oklahoma | May, 1978

Master Machine Tools, Inc.



JIGMILL MACHINES accurately cut to one millionth of an inch.

One of our major customers is Master Machine Tools, Inc. Jim Kincheloe, Bob Miller, and Dick Batten recently visited that facility, and took some photographs for our paper.

Founded in 1932 in Macksville, Kansas, to make automotive and farm equipment for a relatively local market Master moved to Hutchinson in 1941. During their early years . . . for their own shop use . . . a milling attachment for alathe was developed. This item proved extremely useful to the armed forces for use in portable repair shops; and thousands were made during World War II. Following the war, Master's dropped their interest in farm implements to concentrate on a growing potential in general industry for the Lathe Converter.

In 1957, they expanded the lathe attachment line from three models (1/3, 1/2, and 2 h.p.) to include larger sizes, and an expanded line of feed tables. The birth and growth of the missile industry, with the requirement for versatile special purpose production machines, triggered the use of these "lathe converters" and feed tables as milling, boring, and drilling components which could be used like building blocks to fabricate special machines.

During the early sixties, they discontinued the old lathe converter line; and have since concentrated on heads and slides which are used throughout the world as components for special machines, auxilliary spindles for other machines (like planers), and portable milling and boring machines (which can be taken to workpiece as in ships . . . which are too large to take to standard machines).

In the early 60's the design and building of complete tailor-made special machines was started.

The Company was founded by Charles Hill, who was suceeded by his son, H. Lee Hill, as president in 1956. The Dumore Company of Racine, Wisconsin, purchased Master's in 1959 and operated it under George Shoup until 1966. In that year a group of employees and local investors purchased Master's from the Dumore Company and operated under this management group until 1969. In 1969 the present owner, Mr. Wallace E. Carroll, purchased all of the outstanding stocks of Master's and formed a holding company called American Machine & Science, Inc. with Mr. Carroll's other corporate holdings, Katy Industries, American Gage & Machine Co. and International Metals & Machine Co., which is headquartered in Elgin, Illinois.

In May of 1973 Johnson Drill Head Company of Rocksford, Illinois, a sister company within the American Machine

(Continued on Page 2)

MASTER'S Quaility Control Manager, Grady Bolton, with Jim Kinchiloe, Acme's Quaility Control Manager.

Featured Department

YARD

Our featured department for this edition is the Yard. This is a small crew of men that work cooperatively with the Pour Off Department.

The crew consists of Bill Avery, Monty Wimmer, and Bill Rohrs.

Bil Avery is married, and has one child. He and his family reside in Blackwell. Bill has worked for Acme since September of 1977.

Monty Wimmer is a relatively new employee in the Yard. He is single and lives in Ponca City.

Bill Rohrs will celebrate his fifth anniversary with Acme this July. Bill is married and resides in Blackwell.

These men spend their mornings preparing to charge the cupola. They clear the drop rfom under the cupola from the previous day's pouring. They haul materials to be weighed and used for charging, such as silvery pig, ductile pig, coke, flux brick, limestone, and scrap from the Cleaning Room.

They prepare the bedding sand to pack the bottom of the cupola, and load the coke that goes on top of the bedding sand.

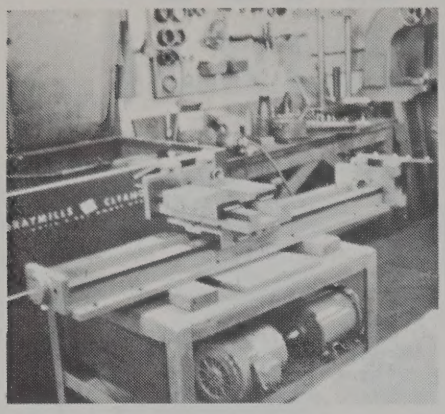
They charge the cupola before and during pouring. At the end of the day, someone stays behind to cool down the drop when pouring is finished.

These men are rather like the mailman; neither rain, sleet, nor snow can slow them. Their jobs are the same each day, and we couldn't pour iron without them.

Left to right, Bill Avery, Monty Wimmer and Bill Rohrs. These men work in the yard.

Master Machine Tools, Inc.

(Continued From Page 1)



Machining some slides that we produced for them.

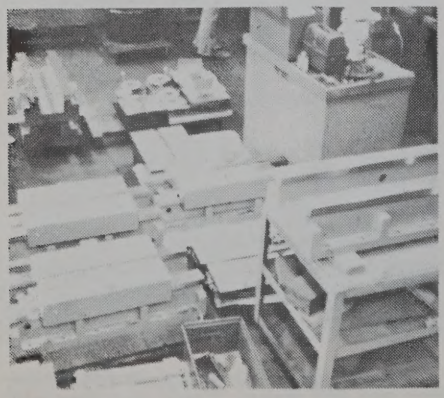
& Science Inc. group, was brought down to the Hutchinson location, placed under Master's management, and officially merged with Master's on July 1, 1973, as Johnson Drill Head Company, Division of Master Machine Tools, Inc. This is our present corporate operating structure.

The purpose of Master's is to manufacture and sell components for special metalworking machines; complete special machines for milling, boring, and drilling applications; auxiliary milling heads for other machinery; and portable milling, boring, and turning machines.

Product improvements and new product development are constantly in process to complement current products within these company goals.

Master products are sold through independent distributors throughout the United States, Canada, Mexico, and Europe. Sales of the current line have grown from $250,000 in 1957 to over two million in 1966 and $3,500,000 in 1977, and they employ 88 people.

Some of their customers are GE, Westinghouse, Boeing, Chrysler, Petrochemical, Leisure Time Products, General Dynamics, Teledyne, Crumman Aircraft, Litton, Newport News, and the U. S. Navy, who deal with aerospace, paper, aircraft, railroads, shipyards, maintenance equipment in large factories, valve, pump, and mining companies, the steel industry, and medical research, a widely diversified end use. Thev have customers in all 50 States and do considerable exporting, and have imminent plans of expansion in the future.



Finished, Machined Castings.

THINGS ARE HAPPENING

Things are happening at Acme. On April 22nd, 17 yards of concrete were poured in a reinforced base for the 100 ton new sand storage tank. We have received the sand transporter and the tank is due on May 11th, to be installed by Belger Cartage using a 75' Boom hydraulic cran and disconnecting all overhead high tension wires.

The old sand tank elevator was dismantled on April 25th, blower truck sand has obsoleted the elevator. These things are being done in preparation for our overhead sand to main bay molding, which we hope to have completed and in operation by mid June.

We have recruited from Pittsburg State University a Plant Engineer who will be taking over planning and organizing our future modernization efforts. We are pleased to welcome Ed Koch and hope he will have an easy adjustment to the move to Blackwell with his wife and family.

We have received the first 8 of 16 patterns for Amarillo Gear, sent to us from a foundry in Wichita Falls, which has been sold to Dana Corporation and is going largely captive. This is some of the work which Dick Batten has been actively promoting for our machine molding.

Bob Fenton will be rejoining Acme Foundry and will be taking over Dick Batten's Customer Service calls, primarily in the Texas area with some selected local calls, specifically Cessna and Masters. We welcome Bob and look forward to working with him.

Dick Batten will be taking over duties as Sales Coordinator and will be steering the efforts of Bob Fenton and Jack Graves, as we provide our customers with service calls and communication channels. Dick has been forced to curtail travelling on his doctor's orders and will concentrate on phone communication, quotations, follow up, and sales planning.

We are making a customer survey of pattern requirements for the last 6 months of 1978 and the year 1979. The objective is to establish our demand level so we can plan to take care of our customers requirements. Incidental to this is a culling out of obsolete patterns which are in our storage.

We have many new patterns which have been received during the past 4 months and we are expecting many more.

We have orders for two new Shell Mold patterns with quotes on two more we expect to be active shortly.

L & M pattern delivered a new cylinder pattern on April 27. Arrow specialties has sent in orders on several machine molding jobs and we are beginning to reap the fruits of an expanded sales effort since the first of the year by Jack Graves and Dick Batten.

These patterns are the result of two prime causes. First they are an expression in the reliability of Acme Foundry to provide Quality Castings on time. Secondly, they are the result of being "Competitive to the market". We have a good reputation for quality, and Bob Miller's group has done a good job in "on time delivery", but this is not enough. We must be competitive with other foundries in order to secure the work.

Part of this is the continuity of production.

To have this, it is necessary to be sure our work force is here every day. Absenteeism has increased lately to over four per cent, meaing we have an average of seven people absent daily. This makes it more difficult to operate and strains the balance of the department which has to fill in.

Unemployment in Blackwell is low, as indeed it is in the whole area.

Our Personnel Department has been working hard to fill the gaps in our work force caused by the usual exodus to summer jobs, such as farming and oil field work, which are more attractive in the warmer weather.

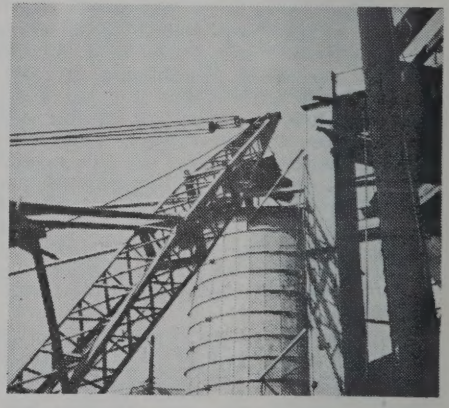
We have been advertising in areas more remote from Blackwell and have some successes.

We welcome to our operation several new faces among the women of Acme Foundry. We are using women in areas which have until recently, been thought to be a "man's job." We wish these ladies good luck and hope they will fit in easily to the operation and be able to perform the duties assigned to them.

Negotiations of our contract have started and it is the Company's desire that an amicable settlement is reached speedily so that we can get back to doing the things we do best, **making good reliable castings.**

by Fred Allon

Dismantling the Elevator

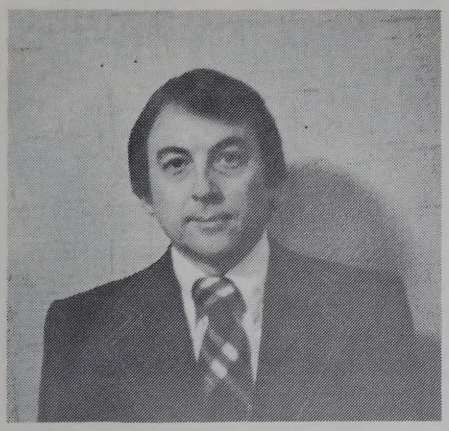


Pictured are some of our Maintenance department taking down the elevator that sits between the Core Room and the Ductile department. Replacing it will be a new 100 ton sand tank, that will be installed May 13th. The tank will sit on a concrete base of 17 yards of concrete, and will hold the sand for the new no-bake continuous mixing machine purchased from Kloster Associates.

A transporter will transport the sand from the tank through a pipe to a hopper, that will feed the sand to the air-set sand machine. The tank itself is 41 feet tall and weighs 10,600 lbs.

This is another sign of the progress we're making at Acme Foundry.

Robert L. Fenton



BOB FENTON

Bob Fenton will join Acme Foundry on May 1st and will be the sales and service representative for the southern area which will include parts of Louisiana, southern Oklahoma and Texas.

Bob is a native of Blackwell having graduated from Blackwell in 1953 and after attending Northern Oklahoma College started to work for Black, Sivalls & Bryson, Inc. as sales and service engineer selling and serviceing oil field equipment in this part of Oklahoma. He was area Supt. for Acme from 1959 to1969 and was foundry manager for M. W. Hartman, Inc. Hutchinson, Kansas. He has been a project engineer for American Metals Climax-Blackwell Plant and comes to us from CFM Corporation-Cast Metals Division where he served as general manager for the past three years.

He is married to Phyllis Fenton and has three children, Phillip, Julia and Tara Marie. They reside at 234 Fair view in Blackwell.

He is a member of the American Foundryman's Society and was past chairman of the Plain's States Chapter. Aviation Boosters Club of Ponca City, AOPA Pilots Assn., Air Safety Foundation, a board member of the Blackwell Industrial Foundation and was a commissioner for the City of Blackwell for three years.

Bob is an active 1200 hour pilot and has been involved in general aviation in this area for many years.

ANNIVERSARIES

Happy Anniversary in May and June to Lester Bruce, Ralph Epperly, Rick Sharp, Jim Junkens, Kenneth Williams, Dick Batten, Alfred Potts, Garald Crowe, James Zachary, Sharon Anaya, James Brooks, Bill Curtis, Gary Bretch, John Hood, Oren Peres, Everett Stebbins, Tom Howard, Bernard Bartosovsky, Tim Kelly, Estell Cain, Jack Moore, Joe Hatcher, W. E. Duggins, Art DeCamp, and Diane Hightower, and Roland Humble had an anniversary in March that we missed. Sorry Roland.

The reason ideas die quickly in some heads is because they can't stand solitary confinement.

ACME'S LAB

The lab is the first place of quality control. In the lab, iron samples are tested to determine their compatability with set specifications. A series of chemical, physical and visual tests are performed daily to insure these quality standards are met. Chemical tests performed locally tell us the sulphur, carbon and silicon content of the iron. Physical testing includes the pulling of test bars. Tensile strength as well as yield and elongation are recorded and compared to respective American Society for testing and materials specifications. isual examination of ductile iron microplugs requires the cutting and polishing of one sampe button from each tap poured daily. The microstructure of this nodular iron can prove to be a quick check otthe knowledgeable foundryman of the physical characteristics of the finished castings. A combined study of all these varied test results establish a means for determining the suitability of additions made and the correctness of amount in the raw iron that produce the desired qualities of the finished castings.

Another important aspect of quality control dealt with in the lab is the control of molding sand. From the results of daily sand tests we find and correct any variances in molding sand standards through the use of approved additives. Some of the tests included in the daily check of molding sand are to determine permeability, green compression, green shear, mold hardness and moisture, as well as other characteristics. Bv controlling the qualities of our molding sand we can assure a stable mold into which the iron is poured.

The tests performed in the lab provide conclusive evidence of conformation to specification and requirements of qualityy control being maintained and reflect Acme's fine standing with all of her customers, as a Quality Casting Producer.

SHERY COX, Lab

We're happy to announce the promotion of Shari Cox from Lab Assistant to Lab Technician. Shari is replacing Ray Brown, and has been with Acme since the first of the year.

(Continued on Page 4)

Acme's Tour of Pittsburg University

Louise Sims and Fred Allon visited Pittsburg State University in Pittsburg, Kansas on April 11th to interview graduates of the Industrial Science Course. Pittsburg is now a fully credited University with a four year course.

We were well received by the faculty, however most of the graduates had already been placed. We did interview 3 young men who have since visited Blackwell, and one at this time will start work on June 5th as Plant Engineer.

We are still hoping to have one of the graduates take up a position of Industrial Engineer.

The choice of Pittsburg University was deliberate, as the class of students is usually from a farming background and has some instinct for hard work already instilled. Again of course Blackwell is a small community, and frequently people from a large town do not like a small community, whereas there's nothing nicer if you were born in one.

The Professor arranged for us to visit with each of the department heads and we can be sure next time we will be able to know the graduates in their prior to graduation years, which will make our recruiting job easier.

We were fortunate too, to have a guided tour through the facility and have agreed to serve on the Advisory Committee, which is concerned this year on enlarging the foundry facility.

Thev also have a full machine shop facility where they are teaching computerized tape controlled machining.

The young man who is joining us on June 5th is an Electronics major and will be useful during our modernization programs.

Fred Allon

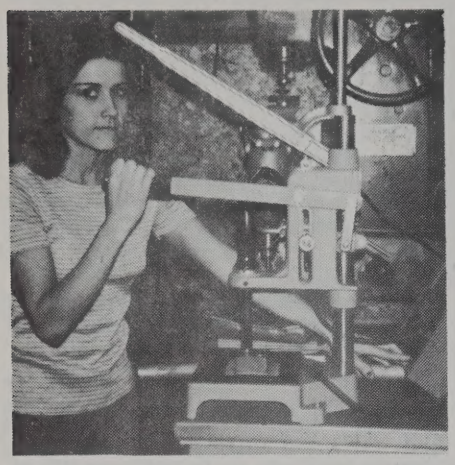
REPRESENTATIVES OF MASTER MACHINE.

Acme recently had a visit from two representatives of Master Machine Tools, Inc. Becky Ratzlaff, casting buyer for Master's, and Merle Hoyer, purchasing agent, flew to Blackwell and went through our plant. The purpose of the trip was to become more familiar with our facility and get better acquainted with the Company.

We enjoy showing visitors through the plant, and they're always welcome.

ACME'S LAB

(Continued From Page 3)



LISA HAMILTON, Lab

Lisa Hamilton is our new Lab Assistant, and will be working with Shari. Lisa has a young daughter and resides in Blackwell.

Lisa, polishing line melt ductile and cupola ductile buttons.

ACME'S SECURITY

As you all know, in the past several of the employees have lost some valuable items from the bath house and from their cars in the parking lot. Acme has also lost some valuable materials.

In an effort to curtail these losses, we have added new fence and repaired the old one, and installed armed security guards for week ends.

If any of you see any unauthorized personnel on Acme property, it would help tremendously if you would report it.

Thanks, Max Payne

ANNOUNCEMENT

Don Nickles, a vice-president of one of our major customers, Nickles Machine Co., of Ponca City, is running for State Senator in Oklahoma. We are pleased to see people of industrial background taking an interest in our state government.

RED CROSS

Red Cross course completed by 8 Acme people.

Eight employees recently completed a Red Cross Multimedia first and course, and received certificates for their newly gained knowledge.

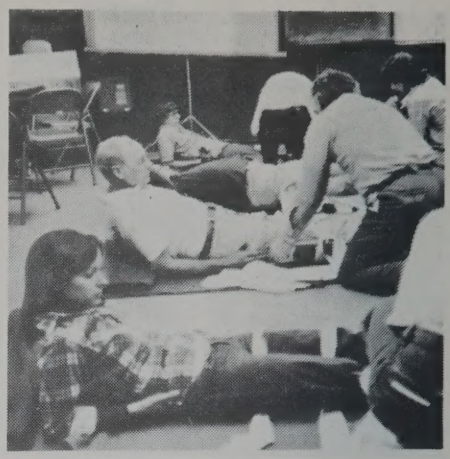
Shari Cox of the Lab, Teresa Fowler and Jack Bell from the main office, Ronald Younger and Garald Crowe of Ductile, Kenneth Green of the pour off crew, John Hood, foreman of the shell core, and Max Payne, our personnel director volunteered for the course, and spent 8 hours each, learning how to save a life in an emergency situation.

They had an interesting eight hours of study and practice, and everyone seemed to enjoy the class.

You can recognize current certified first aiders in our plant by the Red Cross patch on their hats.

We hope to have another class in the near future.

Pictured is Teresa putting a leg splint on Shari.

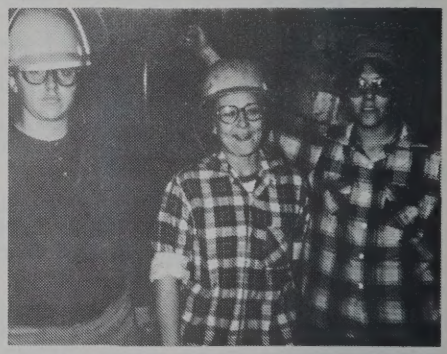


FIRST AID STUDENTS

MANS WORLD?

There is a new trend in industry today, as there is in any business, politics, and in the world, and that is the positions women are holding that were previously held by men. Ladies in hard hats and steel toed shoes are a common sight throughout our foundry, and a practical addition to the workforce.

When asked how the first women in



Left to right, Sharon Wilson, Sharon Anaya, and Shelly Cantu.

(Continued on Page 5)

"I'm caught up with my work Mr. Payne, and the thought occured to me that you might like to shoot the breeze."

MANS WORLD?

(Continued From Page 4)

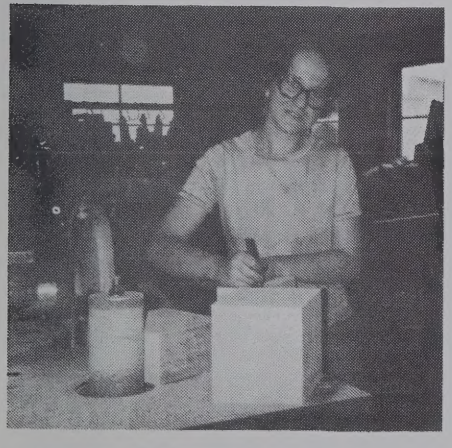
the Pour Off Department are working out on their new jobs, Art De Camp, foreman of that department, and A. C. Pratt, assistant foreman, stated that the ladies are very reliable, dependable, and are hard workers. They also added that they wish more of their people were as dependable.

The first woman in the Pour Off Department was Sharon Anaya. Sharon has been with Acme for a year, and previously worked in the Core Room. She operates the overhead five ton crane in Pour Off. Sharon lives in Ponca City and has a 12 year old son.

Shelly Cantu and A. C. Pratt of Pour Off.

Shelly Cantu was the second woman in Pour Off. She skims metal on the main bay, assists in pouring metal, and tells us she loves her job. Shelly is a single lady and resides in Blackwell.

Sharon Wilson is new to pour off, and pours iron. Sharon has three children and is a Blackwell resident.



KAREN REEVES, new employee in the Pattern Shop.

Karen Reeves recently began working in the Pattern Shop. She will be training in the areas of gating and mounting, pattern repair, pattern storage and filling schedules. Karen is single and a Blackwell resident.

"Good will cannot be insured. The only way to retain it is to keep earning it." Frank Tyger

S A F E T Y

BREAK THE LAW EVERY CHANCE YOU GET

Have you ever heard of a guy called "Murphy"? Nobody really knows who he is and, as far as I know, nobody's ever seen him either. But once, long ago, he did something which has been hanging over our heads ever since. He made up his own law, and over the years it's come to be known as "Murphy's Law." As laws go, it is not very long or difficult, but this particular piece of legislation has had far-reaching effects on every one of us who works for a living.

Ever since the first small hand tool was devised by prehistoric man and used to pound, hammer or chip something, Murphy has been hanging around, waiting for a chance to put his law into effect. He didn't have to wait long. One day the cave man accidentally smashed his thumb with his stone hammer and old Murphy was in business.

Right down to this day, Murphy and his law are alive and well and functioning in every area of human endeavor, at home, at work, on the highways and in the skies - - anwhere that people work, play or travel.

What are the features of Murphy's Law? It's simple. Here they are:

1. If it can fail, it will.
2. If it fails, it will be at the worst possible time and place.
3. If it can be picked up, hooked up, operated or taken apart wrong or or unsafely, then someone, somehow, sooner or later, will do it that way.

How prevalent is Murphy's Law in our everyday life? Just take a quick look at the accident statistics in our own country. Look at these shocking figures detailing automobile deaths and injuries, injuries and deaths on the job, in the home, and everywhere else.

In contrast to the good laws that man has devised, Murphy's Law is a real bummer. It's the only law I know of that we should all work hard to violate, every chance we get. And how do we break Murphy's Law? Easy, there's nothing to it.

Stay alert. Be watchful for hazards at work, on the highway, at home, and at play. Try to anticipate what could go wrong and take preventive action to ensure that it doesn't. Alertness and common sense will break Murphy's Law every time and, if we put Murphy out of business, that will mean better safety records and fewer injuries in everything we do.

"It may make a difference to all eternity whether we do right or wrong today." James F. Clarke

Minds are like parachutes; they only function when they are open.

To err is human but to really foul things up requires a computer.

LEISURE TIME

In this part of the country, fishing is a pastime enjoyed by a very large number of the population. And in some instances, the preparation begins long before arrival at the lake, pond, or river.

James Zachary is a Coremaker on the main bay side in the Core Room. He is also quite a fisherman. But James spends more time on the hobby than just fishing. He makes his own fishing jigs. This is quite a process, and definitely requires skill and talent.

James tells us that first he must buy or make a mold for the jig, and then he pours the lead into the mold. He hand paints the jig, and in some instances puts several coats of liquid plastic over the paint. He puts the feathers, badger hair, or squirrel tail on the jig and ties it.

The photograph really doesn't do the jigs justice. They're quite beautiful and colorful. James states that they're primarily for sand bass and stripers, but caught a 20 lb. flathead on one of the larger ones.

James worked for Acme for 13 years previously, and returned one year ago. He and wife, Ruth, are Blackwell residents.

Jigs made by James Zachary.

"I see they've improved the price 15 cents a box, too!"

INDUSTRIAL RELATIONS DEPARTMENT

Considering all aspects of business, in my opinion, Personnel and Safety are by far the most interesting and rewarding. People bring variation to each day's work, in the areas of interviewing and meeting people, and giving assistance to current employees.

Our Industrial Relations Department consists of the Personnel and Safety Director Max Payne, and his assistant. That's me. Max has been with Acme for 11 years. He and wife, Ces, have been Blackwell residents most of their lives. My family consists of my husband, Terry, and our two children. We've lived in Blackwell since 1970.

We'll divide the department into parts and explain each, beginning with Personnel. We are responsible for keeping a balance of employees in each department. This includes advertising for employees, taking applications at all times, interviewing these people briefly, and interviewing in depth for specific positions. All new employees must have a physical examination before reporting to work, and more information taken concerning each person. We issue safety equipment to all new people, and indoctrinate them as to its use and importance. We will show new employees round our plant and explain the operation.

We maintain files on each employee consisting of their work record, absentee records, medical information, documentation of industrial accidents, special progress and learning, etc. We maintain this file even though a person may terminate employment with us.

On occasion, disciplinary action may originate from this office. This is documented and filed, for future reference, as is disciplinary action taken by supervisors throughout the plant.

Special commendations and merit citations are also recorded and filed..

Rates and payroll records are kept and filed.

We enroll new employees in our group insurance plan, and assist others in matters of claims, information concerning their policies, etc. We contact our insurance company to expedite an insurance compensation check to an employee who has been ill and off work.

We assist employees in certain areas concerning the pension plan, and handle withdrawals for them.

In the area of Safety, we hold safety committee meetings, nad conduct regular safety tours of the plant.

We investigate all industrial accidents and make reports on them to be sent to our claims service, and recorded in the OSHA Log and First Aid Log. These reports are used for Workmen's Compensation payments. A yearly report of these accidents is made also. This information must be kept on the premises for a period of five years.

We administer first aid for minor injuries in the personnel office, and direct more serious injuries to a doctor or our local hospital.

We conduct Red Cross First Aid Classes for our employees and our instructor continues to take any classes available.

We are continually working on a program of presenteeism. This includes keeping in touch with employees while they're off work for any reason, requesting a doctor's certificate to return to work on numerous occasions. We keep a daily report on who is working and who isn't working, and supply the payroll department with this information.

We gather information, take photographs of visitors to our foundry, write articles, and make a layout of our newspaper. This is a very interesting and time consuming part of my job, and I welcome any news you might have,

Louise Sims and Max Payne

either about the foundry, yourself, or your family. We mail many copies of this publication to our customers and other people interested in Acme Foundry.

We order uniforms, for our employees who want them, and have charge of our uniform rental. This includes keeping a simple set of books of weekly and monthly charges for each person using uniforms; taking and reporting to our rental company—complaints or shortages; getting credit for an employee who has been off work for several days; and making sure that when a person terminates employment with us, he leaves all uniforms, or is charged for those he keeps.

We supervise the janitorial services, vending machine service, and Security service.

We order all safety equipment used in the plant. This includes respirators, spats, safety glasses, hats, gloves, prescription safety glasses, all safety shoes, etc. We issue the equipment from this office.

We try to keep communications open between the union and management, and deal with second step grivances as the General Managers designate.

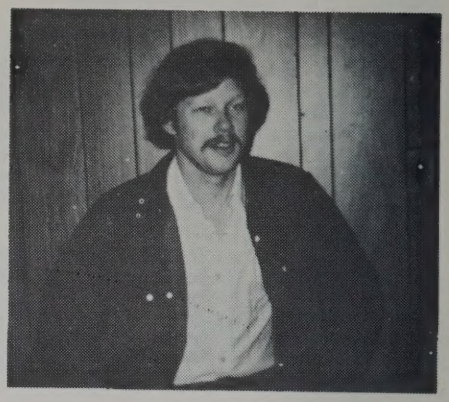
Payroll checks are distributed through this office.

We are here to help you at all times. If we can be of service, do not hesitate to call on us.

We are a service oriented department.

by Louise Sims

NEW PLANT ENGINEER



On June 5th, Ed Koch (pronounced Cook) will assume his duties as our plant engineer. Ed is a spring graduate of Pittsburg State University with a degree in Electronics. He has served in the Navy, is married, and has a young son. Ed and family will be moving to Blackwell in the near future. We're very happy to have Ed and his family in our community and associated with Acme.

A five-year-old boy was asked by a new neighbor how many there were in his family.

"Seven," was the reply.

"My, that many children mus cost a lot," the neighbor exclaimed.

"Oh, no," said the child. "We don't buy them, we raise them."

DO YOU KNOW YOUR INSURANCE POLICIES?

Chances are, few of us know our policies and all of the facts they contain, as well as we should, to get the maximum benefit from them.

Here is some information that might be of use to you.

Save those doctors' statements, or in some cases, receipts from your doctor. Be sure the document states for which member of your family treatment was given. Also save the individual statements from your pharmacist, stating for whom a prescription was prepared.

These expenses add up and can be applied against your Major Medical coverage. Our policies are $100.00 deductible for each member of the family in each calendar year. So if you're likely to spend over $100.00 on medical treatment for any member of your family, it's possible you'll get 80% of your money back, if you submit these charges to our insurance company.

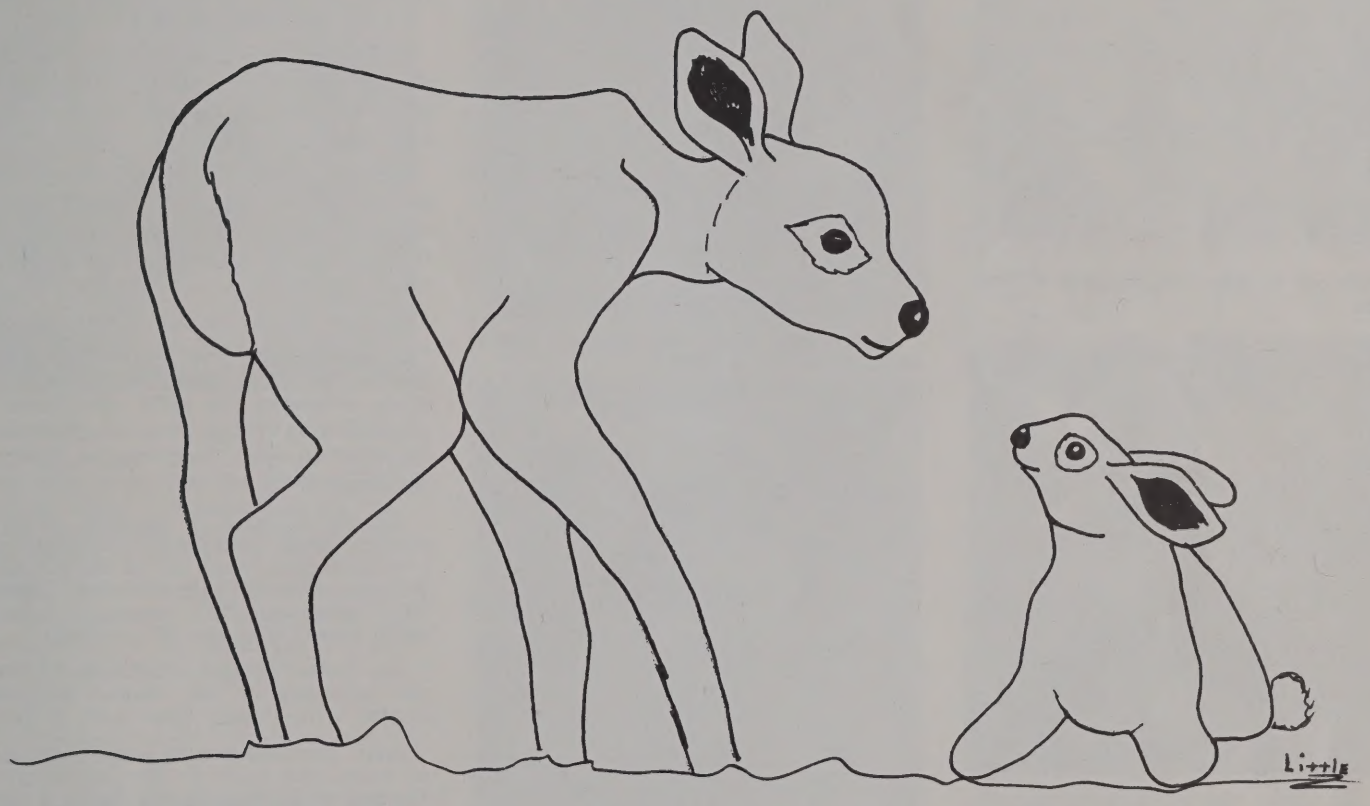
If you have questions concerning your policy, consult the Personnel Office. We're here to be of assistance to you.

In the next issue of our paper we'll cover another point of insurance.

ACME TODAY

ACME TODAY | Edited by Louise Sims | Blackwell, Oklahoma | December, 1981

MERRY CHRISTMAS to ALL



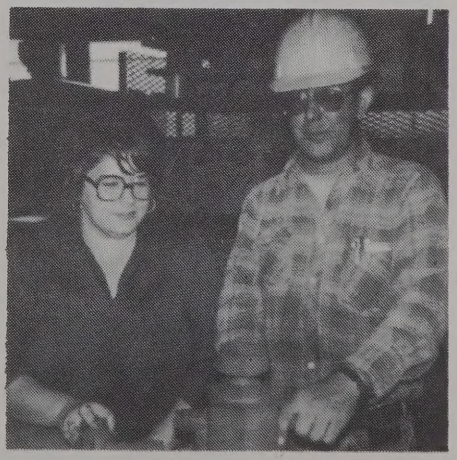
FEATURED DEPARTMENT

This month's featured department is Shell Core and Shell Mold. The shell process was developed by Dr. Johannes Croning of Hamburg, Germany, in 1943. It was kept secret by Dr. Croning and his associates until 1947, when it was uncovered by U. S. Government Office of Technical Services investigators and revealed to the U. S. public.

Acme's Shell Core and Shell Mold Department is headed by Foreman, John Hood. John has been with the company for 12½ years. John's interests away from the job are bowling, playing soft ball, and drawing. He is a talented artist, and two of his drawings are elsewhere in this edition. John's assistant foreman, Howard (Butch) Scott, joined Acme in July of this year.

We have five shell core machines in operation at this time. These operators are Richard Staten, Gary Betz, John Shepherd, William Goatley, and Teri Beach.

The sand mixture is put into a hopper, which sets above the shell core machine, and from there it goes into the sand tank on the machine. It is blown into the machine, which is operated at a designated temperature, decided upon by the machine operator. When the machine has completed a cycle, it will open the operator will remove a core. A Shell operator can average 200 complete cycles in one 8 hour shift.



Rita Looper is discussing a core with foreman, John Hood.

The core will now go to the paste table, to Mari Lynn Swopes and Rita Looper, where the seams will be gently scraped and the core cleaned. If there are any flaws, it will be mudded. The paste table workers may also glue a paste on core onto the core in some

(Continued on Page 2)

CONGRATULATIONS TO HOUSTON HALL FOR 35 YEARS WITH ACME.

Featured Department

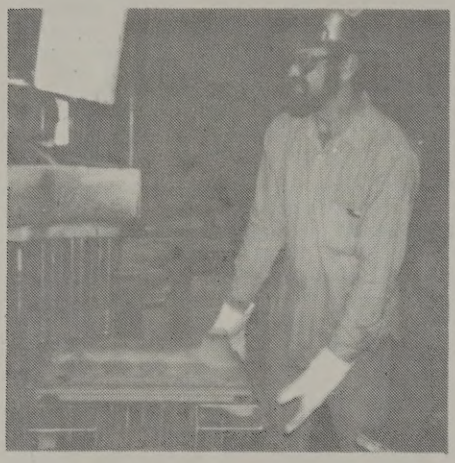
(Continued from Page 1)

instances.

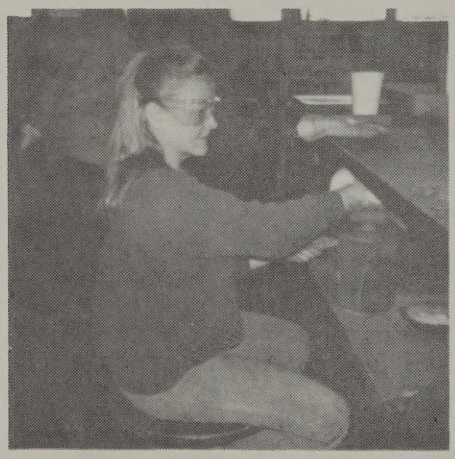
Now the core is ready to be dipped in a solution of isopropal alcohol and EZ Dry graphite. This produces a smooth finish required on some cores. The worker will also give the core any special care that might be necessary, after which it will be placed in a drying oven, in preparation for the molding department. One finisher can complete around 100 cores a day. The Shell Department can supply the foundry with 900-1500 cores per day.

Kenny Epperly is lead man in Shell Core. Kenny has been with Acme for 7 years. Kenny also takes iron temperatures and checks scrap castings for core problems.

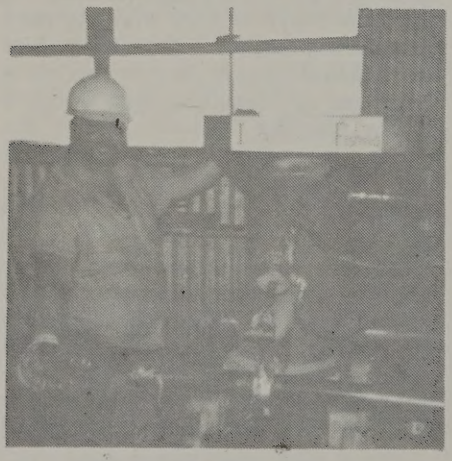
Acme's Shell Mold department is made up of machine operator, Ray Tull, and William Gable, helper.



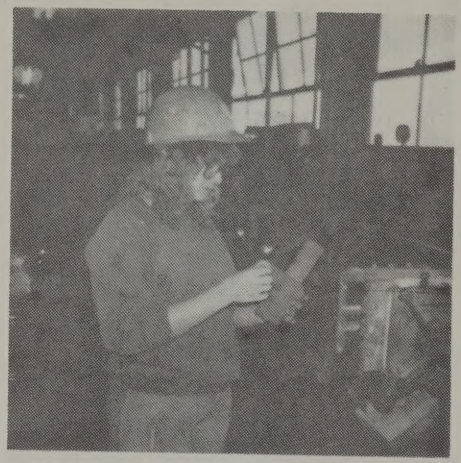
Pictured is Ray Tull, making a shell mold.



Mari Lynn Swopes is cleaning a freshly made core.



Apparently, there are things Richard Staten would rather be doing, but you wouldn't know it by the quality of his work.



Teri Beach, Shell Core machine operator, examines a core.

William Gable, Shell Mold helper.

Shell Core wouldn't be complete without mascot, Clyde. This name should be Clydette.

Ray can produce 110-150 molds a day from any of 14 different patterns. The cost of a shell mold pattern will run from $8,000-$12,000. We supply castings from our shell molds to several different cutomers, some of which are Haliburton, Kimray, Fisher, and Phillips Petroleum.

One shell mold pattern can make from 2-34 castings per mold, depending on the job we're running.

The Shell Core and Shell Mold Department is a very efficiently run department, filled with the quality of work they turn out.

THANKS TO YOU

Thanks To You It Works For All Of Us The UNITED WAY. . . .

This year Acme employees gave or pledged a total of $2,608.00 to the United Way. This is, by far, the best we have done.

The United Way is an excellent way for us to give and help make it possible for several agencies to continue to operate. By giving, you help your town and yourself.

We can benefit by our children being able to participate in Cub Scouts, Boy Scouts, Bluebirds, Campfire Girls, Red Cross swimming and child care lessons, free blood (a charge is received by the hospital, though), and Youth Center activities.

Anyone in need is welcome to get clothing from Associated Charities, as well as donate items you no longer use. We also benefit from the Red Cross blood program, CPR lessons, and disaster relief, like the '55 tornado.

Any Senior Citizen is welcome to join the activities at the Senior Citizens Center. They really have a lot of fun.

Last, retarded people have a chance to learn and work at the Opportunity Center, which helps make them a useful part of society.

All of these agencies make Blackwell a better place to live and raise our children. Most of us do directly benefit from at least one of these agencies, and it's great to be able to give something back, isn't it?

Here's how the different crews gave:

Cupola	$505
Cleaning Room	$468
Electric Furnace	$278
Molding	$210
Production Office	$186
Main Office	$130
Shipping	$104
Maintenance	$ 74
Pattern Shop	$ 30
Core Room	$ 25
Shell Core & Mold	$ 10
Other	$588

Thanks to everyone who gave from the UNITED WAY!

Molding Foreman, Harding Rose, Celebrates 35 Years at Acme.

Harding Rose grew up on a farm in Oklahoma. His family moved to the oilfield in 1936. Harding began his foundry career in Valeo, Calif., in the Naval Shipyard Foundry, as an Apprentice Floor Molder 36 years ago. A year later he moved back to Oklahoma and began as an Apprentice Molder at Acme Foundry. He was a Journeyman

Molder for 21 years, before becoming a working supervisor in 1967. About a year later he became the Molding Foreman at Acme. Harding and his wife, Doris, raised three children in Blackwell, two daughters and a son. People like Harding Rose are the backbone of our nation's industry. We extend our contratulations to Harding for 35 productive years with Acme.

FELLOW WORKERS LEND ASSISTANCE

Employee, Bill Avery was recently burned in an accident, severely enough to be placed in Baptist Burn Center in Oklahoma City. Bill underwent skin graft surgery, and is reported doing quite well.

Friends and fellow workers rallied to Bill's aid when they set up a contribution fund, to assist with utility bills, groceries, and other necessities for Bill and his wife and young son. They had collected approximately $300.00

You are all great people to think of another person in this thoughtful way.

All of us wish Bill a speedy recovery!

PURCHASING DEPT.

Lawrence Shreck and Mindy London are sharing the purchasing of all the foundry supplies and maintenance items. If you have any suggestions on how we might decrease any waste or save money, they would like to hear from you. They would also like to know if you receive any damaged supplies or if a supply is not working well. Any information will be greatly appreciated.

Number, Please? 472.1 Million

One of few things on earth increasing faster than the number of people is the number of telephones they use.

A new study by the American Telephone & Telegraph Company shows that, globally, telephones nearly doubled in number between 1970 and 1980, to 472.1 million. World population rose about 20 percent during the same period, to some 4.4 billion.

The latest count means that the earth has about 11 phones for every 100 people. But distribution is uneven. The Soviet Union, for example, has only 8.4 phones per 100 residents—35th among the 44 nations that were listed by AT&T. The top 20:

	Phones In Service	Phones Per 100 Persons
United States	175,505,000	79.1
Sweden	6,407,031	77.1
Switzerland	4,446,205	70.4
Canada	15,560,264	65.6
Denmark	3,144,558	61.4
New Zealand	1,729,916	55.0
Australia	7,396,212	52.0
Netherlands	6,852,776	48.6
Britain	26,651,384	47.7
Japan	55,421,515	47.6
Finland	2,244,365	47.1
West Germany	26,632,302	43.4
Norway	1,725,678	42.3
France	22,211,952	41.4
Austria	2,812,678	36.6
Belgium	3,447,697	35.0
Italy	18,084,996	31.8
Hong Kong	1,517,294	30.2
Spain	11,107,624	29.4
Greece	2,664,050	28.2

U.S.NEWS & WORLD REPORT, Oct. 5, 1981

A father has been described as a parent who owns a wallet in which his children's pictures are used as a substitute for money.

DIAL "TEL - MED"

Presbyterian Hospital in Oklahoma City, is a remarkable facility, beautifully equipped for medical care, and staffed with some very special, efficient people. They also have an excellent educational department, aimed at training and aiding the public in medical training and information. One of these services is "Tel-Med", a free library of health-related tapes provided by Presbyterian Hospital as a public service. What can Tel-Med do?

Tel-Med is not to be used for emergencies, to identify your illness or to replace your family doctor. Tel-Med is NOT designed to tell you why you are sick, only your personal physican can do that. If you need a physician, call your local county medical society.

How does Tel-Med work? It's easy! Just call and give the library operator the number of the tape you wish to hear the same tape again, or any other tape, call back and the operator will be happy to play it for you. For more information about Tel-Med, call tape 429, "What is Tel-Med?" A complete listing of the Tel-Med tapes currently available is in a brochure, which may be obtained by sending a self-addressed, stampted envelope to: Tel-Med, Presbyterian Hospital, Northeast 13th at Lincoln Blvd., Oklahoma City, Okla. 73104.

Examples of available tapes:

Mumps	224
Chicken Pox	229
Deabetes in Children	233
Children's Vision	471
Genetics and Heredity	5010
Birth Control	54
Breast Cancer	6
Lung Cancer	179
Cancer (7 warning signs)	183
Ulcers	44
Arthrites-Rheumatism	127
Alcoholism (scopes)	942

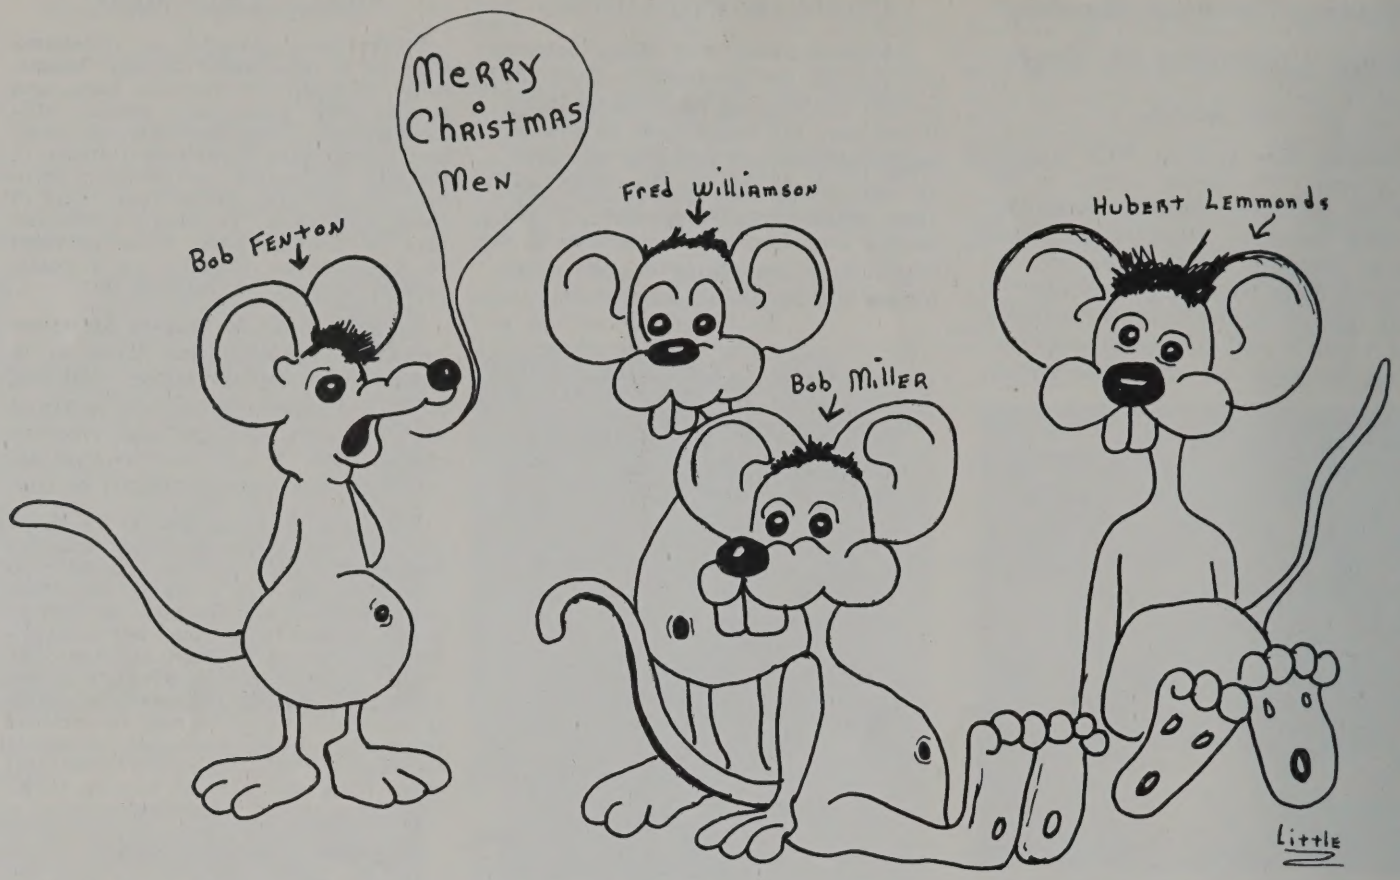
Closed Sundays and Holidays.

If you have a medical question, give the library a call. It will only cost you a phone call.

Full of It

The lion sprang upon the bull and devoured him. After he had feasted, he felt so good that he roared and roared. The noise attracted hunters and they killed him.

The moral of the tale is that when you are full of bull, you should keep your mouth shut.



DAYDREAMING DANGERS

Think back to any injuries or near-misses you've experienced. Were you concentrating on what you were doing at the time? Or was your mind off somewhere in the next county, or the next century?

The lion's share of injuries happen, not because of lack of your command And it's when we concentrate that we're most likely to use all the knowledge we have.

It's easy to say, "Latch your mind onto whatever you're doing." But our thoughts naturally tend to slip the leash, jump the fence, and go roaming.

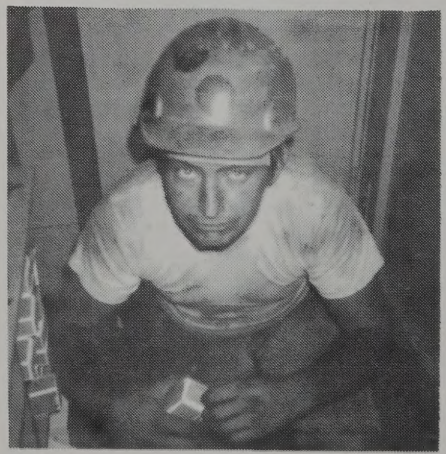
If there is anything to be thankful for, it's an active and free-roving mind, but there is a right time and place. If your mind is exploring the far-away places when you're planning for a difficult job, or when you're driving down the expressway, you're risking the chance of getting your mental wing clipped for good!

It's easy for us to clamp our minds onto our work for short periods, but it's not so easy over the long haul. You probably concentrate when you're in the midst of something that you know is risky; but what about sawing a post or hammering a wedge in place?

You probably concentate on your driving in frantic, rush-hour traffic, but what about when you're pedaling gas down a long, lonely highway?

It's great to let the mind wander through distant and unknown territory, but not when you're on the job, on the road, or in the swing of any activity.

SAFETY PAYS



Tim Kelly says "I am sure glad I had my hard hat on when that guy accidentally hit me in the head with a sledge hammer."

Refrigerator Freezer Buyers:

SIDE-BY-SIDE MODELS MAY LET YOU DOWN --

In the market for a new refrigerator? Considering one of the highly promoted side-by-side models rather than the traditional freezer-on-the-top and refrigerator-on-the-bottom units? These newer models do save a little stooping and offer about 7% more usuable space in comparable models (according to a leading consumer product testing firm). But the advantages of side-by-side models don't come cheaply! Not only do side-by-sides cost about a third more to buy (based on a comparison of suggested prices of the leading models), but they cost about 20 percent more to operate. Over the 15-year life of an average refrigerator-freezer, a side-by-side model is likely to cost an extra $310 in electricity charges (at a typical 6.2c per kwh).

PROFESSIONAL

As the banquet was about to begin, the chairman realized no minister was present to give the invocation. He whispered to the main speaker. "Sir, since there is no minister here, will you please ask the blessing?"

The speaker arose, bowed his head and with deep feeling said, "There being no minister present, let us thank God."

WOMAN

WOMAN—She's an angel in truth, a demon in fiction—
A woman's the greatest of all contradiction;
She's afraid of a cockroach, she'll scream at a mouse,
But she'll tackle a husband as big as a house.
She'll take him for better, she'll take him for worse;
She'll split his head open and then be his nurse;
And when he is well and can get out of bed,
She'll pick up a teapot and throw at his head.
She's faithful, deceitful, keen sighted and blind.
She's crafty, she's simple, she's cruel, she's kind.
She'll lift a man up, she'll cast a man down,
She'll make him her hero, her ruler, her clown.
You fancy she's this but you find that she's that,
For she'll play like a kitten and fight like a cat.
In the morning she will, in the evening she won't,
And you're always expecting she will but she won't.

GEOGRAPHICAL AGES OF WOMEN

From 15 to 25, she is like Africa
Half virgin, half explored.

From 25 to 35, she is like Asia
Hot, torrid, and mysterious.

From 35 to 45, she is like America
Streamlined, efficient, and cooperative.

From 45 to 55, she is like Europe
Devastated, but still good.

After 55, she is like Australia
Everyone knows where it is, but—
nobody goes there!

WOMAN

WOMAN—She's an angel in truth, a demon in fiction—
A woman is the greatest of all contradiction;
She's afraid of a cockroach, she'll scream at a mouse,
But she'll tackle a husband as big as a house.
She'll take him for better, she'll take him for worse;
She'll split his head open and then be his nurse;
And when he is well and can get out of bed,
She'll pick up a teapot and throw at his head.
She's faithful, deceitful, keen sighted and blind;
She's crafty, she's simple, she's cruel, she's kind.
She'll lift a man up, she'll cast a man down,
She'll make him her hero, her ruler, her clown.
You fancy she's this but you find that she's that,
For she'll play like a kitten and fight like a cat.
In the morning she will, in the evening she won't,
And you're always expecting she will but she won't.

Imperial Turtle

OFFICIAL MEMBERSHIP CARD

21 South Jefferson
SHERIDAN, WYOMING 82801

As a member in good standing you can subscribe new Turtles as follows:—

I. We assume all prospective turtles own a Jack Ass. On this assumption is the reason for the password.
This password must be given if you are ever asked by a fellow member, "Are you a turtle?". You MUST then reply "You bet your sweet ass I am". If you do not give the password in full because of embarrassment or some other reason, you forfeit a beverage of his choice. So always remember the password.

II. To become an official Turtle you must first solve the following riddles:
1. What is it that a cow has four of and a woman has only two of? (answer: Legs)
2. What is it a lady does sitting down, a man does standing up, and a dog does on three legs? (Answer: Shake hands)
3. What is it that is round and hard, has hair around it. when sticking out of a man's pajamas he can hang his hat on it? (Answer: His Head)
4. What is that goes in hard and firm and comes out soft and sticky? (Answer: Chewing gum)

III. You are now a member of the Turtle club. Govern yourself accordingly and procure new members.

Congratulations

PRAYER THOUGHT:

Dear Lord,

I want to believe the scripture which says "All things work together for good to those who are called of God," yet, I'm not sure how my being here can "work for good." Some say that hardships are the raw material for increased growth and goodness. Help me to turn this situation over to you so that this all works out for the better and I don't become bitter.

Amen

Please feel free to ask your physician, nurse, or volunteer to request the Chaplain if you wish to contact him.

Ethan C. Graham Dies; Rites Thursday, 2 p.m.

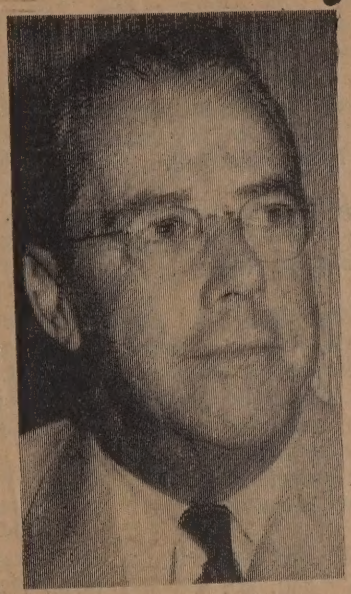
Ethan Canfield Graham, 68, Blackwell industrial pioneer, died at Blackwell General hospital Monday at 7 p.m. His residence was at 505 North Sixth.

Funeral for the owner and founder of Acme Foundry and Machine Company has been set for 2 p.m. Thursday at the Presbyterian Church with Rev. Lawerence Woodcock, pastor and Rev. Lynn Butcher, former pastor, officiating.

Burial is to be in Blackwell IOOF cemetery by Roberts and Son Funeral Home.

The body will lie in state at the funeral home until 1 p.m. Thursday and will lie in state at the church until time for the service Thursday. The casket will not be opened following the service.

Friends wishing to honor Mr. Graham's memory have been asked to make contributions to the Cancer Society in care of Roberts and Son Funeral home.



ETHAN C. GRAHAM

Mr. Graham was born Aug. 3, 1902 at Independence, Kans. and came to Blackwell in 1926 to found Acme Foundry.

Tuesday morning upon learning of Mr. Graham's death, friends, business associates and employees described him as a man who was always generous beyond the call of duty.

At Blackwell General hospital Sister Mary Angelia, administerator, commented, "We feel we've lost a tremendous friend." He was one of those rare men, who helped, when help was most needed and often anticipated your need and yet, never looked for public recognition."

Mr. Graham was treasurer of the Western Kay County hospital Association, which was instrumental in obtaining money from the community for the construction of the hospital. He had also held the position of member on the advisory board to the school of practical nursing for the past 12 years and was instrumental in providing many scholarships to needy student nurses.

During the depression days, when Blackwell was hit the very hardest, Mr. Graham was chairman of the Beatty Milk Fund, which was organized by the Junior Chamber of Commerce. The fund provided between 45,000 and 50,000 quarts of milk to needy children in Blackwell following its organization in 1932.

For many years he played a vital role in the work of the Blackwell Junior Chamber of Commerce and along with five others was instrumental in forming the organization in Blackwell.

He served as local and state Jaycee president and was also a director of the Blackwell Chamber of Commerce.

A leader in local industry, he always expressed faith in the growth potential of Kay County. An avid pilot, Mr. Graham was also a pioneer in the use of the airplane to make calls upon customers of his firm.

He was a member of the board of directors of First National Bank for many years, and this bank as well as Security Bank and Trust Company will close for the day at 1 p.m. Thursday in tribute to Mr. Graham.

Mr. Graham was a member of the Presbyterian Church in Blackwell and the Masonic lodge.

Survivors are his wife, Virginia; a daughter, Mrs. John (Mary Kay) Thompson of Blackwell; a sister, Mrs. Fred Fogg, Colorado Springs; two brothers, Glenn Graham of Coffeyville, Kans.; Kenneth Graham, Mineapolis, and three grandchildren, Ethan, Ginny and Patricia.

Boling rites scheduled Saturday

The funeral for Elbert T. Boling of Blackwell and Nardin is set for 2 p.m. Saturday in the Nardin Methodist Church.

Rev. Mark Davis and Rev. Verlyn Snell will officiate. Burial will be in Rosemound Cemetery at Medford under the direction of Hackler-Porter Funeral Home.

Mr. Boling died Thursday morning, Jan. 28 in his home after a long illness. He was 86.

Casketbearers will be Jack Smith, Bud Eakins, Paul Kuehney, Alan Reese, Harvey Paige and Harold Lambring.

The casket will be open for visitation until 11:30 a.m. Saturday at the funeral home and from 12 noon until 2 p.m. at the church. The casket will then be closed.

Mr. Boling was born Sept. 17, 1901 in Grant County, Oklahoma to Roy Eugene Boling and Myrtle May (Williams) Boling. He was raised in Grant County.

He married the former Stella May Cupp Aug. 26, 1925 in Caldwell, KS. They resided near Caldwell for nine years before moving to a farm in the Nardin community.

Mr. Boling retired in 1975 and moved to Blackwell. He was a member of the Nardin Methodist Church.

He is survived by his wife, Stella, of the home; two sons, Robert E. Boling of Artesia, NM and Elbert C. Boling of Madisonville, KY; one daughter, Wilma Lee Rockett of Wichita, KS; one brother, Roy Eugene Boling of Caldwell, KS; 10 grandchildren, and 14 great-grandchildren.

Mr. Boling was preceded in death by his parents.

The family suggests memorials be made to the Oklahoma Cancer Society. Hackler-Porter Funeral Home will act as custodian of the fund.

Deaths

Former Blackwellite dies in California

Frank Pittman, former Blackwell resident, died Monday morning in a hospital at Downey, Calif., where he had been hospitalized. He was 86.

Mr. Pittman and his wife have been gone from Blackwell for about 15 years. He was a telegrapher for the Santa Fe Railroad station in Blackwell and lived in retirement on the west coast.

He is survived by his wife, Maud; a daughter, Mrs. C.D. (Frances) Mocabee, Jr.; a granddaughter and a great-grandson.

Arrangements are pending, according to a telephone call from Mrs. Mocabee to Mrs. Dale Brenner in Blackwell.

Military service slated for Henry Buskuhl

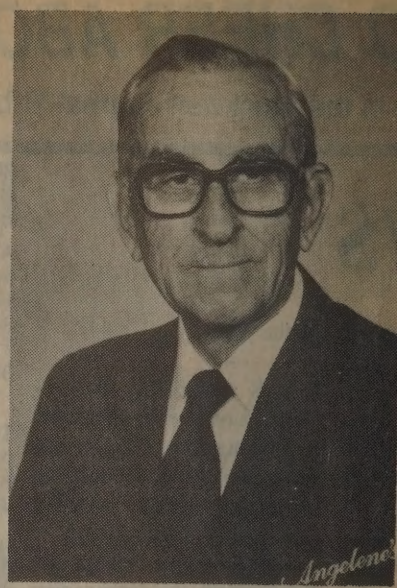
Full military rites for Henry Buskuhl, 83, of Blackwell will be conducted Tuesday, Jan. 8 at 10 a.m. in St. Joseph's Catholic Church. Rev. Joe Burger will officiate, and burial will be in the IOOF Cemetery. Services are under the direction of Roberts and Son Funeral Home.

Mr. Buskuhl was born on July 20, 1907 in West Fallon, Germany. He moved to Nebraska in 1928, where he lived with an uncle until 1930, when he moved to Enid. He later moved to Blackwell.

He married Ione Ingraham on June 20, 1936 in Arkansas City, Kan., and the couple made their home in Blackwell. He operated the Black and White cab company. He was a veteran of WW II, where he served in the US Navy. When he returned to Blackwell, he began working as a carpenter and cabinetmaker. He retired in 1985.

He was a past commander of the American Legion, past exalted ruler of the BPOE, was a member of the Blackwell Chamber of Commerce and the Christian Men's Fellowship, where he was a cook.

Surviving are his wife, Ione of the home; one son, Joe Buskuhl of Dallas; two grandchildren.



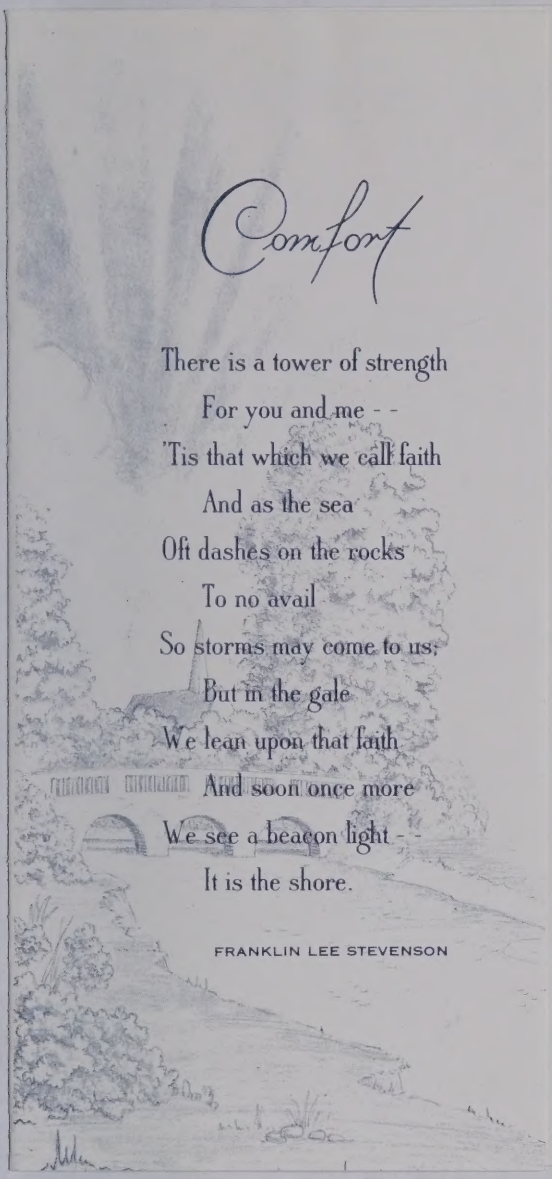
HENRY BUSKUHL

He was preceded in death by two brothers, Joseph and Alfons Buskuhl.

Pallbearers will include Jack Whaylen, R.L. Ballard, Melvin Kahle, Dale Shaw, R.D. Congram, and Kenneth Nunn.

Honorary pallbearers will include Harold Cox, and Howard Congram.

MR. AND Mrs. Joe Buskuhl, Jill and Mark, have returned to their home in Dallas after attending the funeral of Joe Buskuhl's father, Henry Buskuhl, on Tuesday.



Comfort

There is a tower of strength
For you and me - -
'Tis that which we call faith
And as the sea
Oft dashes on the rocks
To no avail
So storms may come to us;
But in the gale
We lean upon that faith
And soon once more
We see a beacon light - -
It is the shore.

CHARLES W. WILLIAMSON

CHARLES W. WILLIAMSON

Charles Warren Williamson, longtime resident and businessman in Blackwell, died at 12:34 p.m. Saturday, May 22, in Blackwell Regional Hospital. He was 83.

His funeral is set for 10 a.m. Tuesday in Memory Chapel of Hackler-Porter Funeral Home.

David Ridenour, minister of the Church of Christ, will officiate.

Casketbearers will be DeWayne Morgan, Earl Byler, Bud Dillow, R.C. Bechtel, Bob Richardson and John Bickford.

Honorary bearers will be Albert Buellesfeld, Frank Murray, Lyle Fulton and Victor Hudson.

Burial will be in the Blackwell I00F Cemetery.

Mr. Williamson was born March 12, 1910, in Newkirk, the son of Fred and Grace (Biddle) Williamson. He attended Blackwell schools and graduated from Blackwell High School in 1929.

After completing his education, he worked for Acme Foundry until World War II when he was employed by Beech Aircraft. He later opened his own pattern shop and went to Tacoma, Wash., and established a shop in 1946. He returned to Blackwell in 1948 and opened Blackwell Pattern Works.

In 1952, when Blackwell was about to lose its bowling alley, he built Bowlarena Lanes on West Doolin.

On Jan. 22, 1953, he married Louise Kucera. They made their home in Blackwell until 1958, moving to Temple, Texas, that year. After building Temple Lanes, they lived in Temple until returning to Blackwell in 1968.

Mr. Williamson remained active in the bowling alley in Blackwell until 1992. His memberships included Blackwell Elks Lodge, Moose Lodge 1031 in Ponca City, and lifetime member of the Blackwell Country Club. He also served on the Blackwell-Tonkawa Airport Authority board.

Survivors are his wife, Louise; one son, Fred Williamson of Blackwell; two daughters, Joann Cartwright of Blackwell and Barbara Larkin, Huffman, Texas; six grandchildren, 10 great-grandchildren and one brother, Fred N. Williamson, Wichita, Kan.

One brother, Howard Williamson, preceded him in death.

Hackler-Porter Funeral Home is in charge of arrangements.

The family has suggested a memorial in Mr. Williamson's name to the Blackwell Public School Foundation. The funeral home will serve as custodian of the fund.

Charles Warren Williamson

Charles Warren Williamson, longtime Blackwell resident and businessman, died Saturday, May, 22, 1993, at Blackwell Regional Hospital. He was 83.

The funeral will be held at 10 a.m., Tuesday, in the Hackler-Porter Memory Chapel with David Ridenour of the Church of Christ, officiating. Burial will be in the Blackwell IOOF Cemetery.

Williamson was born March 12, 1910, at Newkirk, the son of Fred and Grace (Biddle) Williamson. He attended school in Blackwell, where he graduated from high school in 1929. After completing his education, he was employed by Acme Foundry until World War II when he went to work for Beech Aircraft. Williamson later opened his own pattern shop, then moved to Tacoma, Wash., where he established a shop in 1946. In 1948, he returned to Blackwell and opened the Blackwell Pattern Works. He built Bowlarena Lanes bowling alley on West Doolin Street in 1952.

On Jan. 22, 1953, he was married to Louise Kucera and the couple made their home in Blackwell. They moved to Temple, Texas, in 1958, and built the Temple Lanes bowling alley. They returned to Blackwell in 1968. Williamson remained active in the Blackwell bowling alley until 1992.

Williamson was a member of the Blackwell Elks Lodge, Moose Lodge 1031 of Ponca City, a lifetime member of the Blackwell Country Club, and had served on the Blackwell-Tonkawa Airport Authority board of directors. He was an active bowler and golfer all his life.

Survivors include his wife, Louise, of the home; one son, Fred Williamson of Blackwell; two daughters, Joann Cartwright of Blackwell and Barbara Larkin of Huffman, Texas; one brother Fred N. Williamson of Wichita; six grandchildren and 10 great-grandchildren. He was preceded in death by his parents and one brother, Howard Williamson.

Casket bearers will be DeWayne Morgan, Earl Byler, Bud Dillow, R.C. Bechtel, Bob Richardson and John Bickford. Honorary casket bearers will be Albert Buellesfeld, Frank Murray, Lyle Fulton and Victor Hudson.

Memorial contributions may be made in Mr. Williamson's name to the Blackwell Public School Foundation, c/o Hackler-Porter Funeral Home, 301 West Blackwell, Blackwell, OK 74631.

DAVID RUGGS, JR.

Area farmer's service set

David Christian Ruggs, Jr., retired Tonkawa farmer, died at 2:45 a.m. Sunday in Blackwell Regional Hospital. He was 63.

The funeral service is set for 2 p.m. Wednesday, March 5, in the First Christian Church of Tonkawa with Rev. Brooks officiating.

The body will lie in state at Roberts and Son Funeral Home in Blackwell until 12 noon Wednesday. The casket will be closed at the church.

Members of Post 2855, Veterans of Foreign Wars in Blackwell, where Mr. Ruggs was a member, will make a flag presentation at the graveside in the Tonkawa IOOF cemetery.

Mr. Ruggs was born Jan. 19, 1923, in Tonkawa and grew up on a farm south of Tonkawa. He moved to California in 1942 and entered the U.S. Army in 1943.

Upon his discharge, he returned to Tonkawa and lived on a farm south of town. He married Doris Patricia Jones on Nov. 21, 1942, in Hollywood, In 1952, the family moved to farm southwest of Blackwell.

Mr. Ruggs was an avid bowler and rode with Highway Patrol Troopers for many years. He was an honorary member of the State Troopers Association. He was also a talented carpenter and took pride in building fine pieces.

Survivors are his wife, Doris; two daughters, Mrs. Charles (Patricia Carol) Holcomb, Houston, TX, and Mrs. Scott (Nancy)O'Hair, Ponca City; one son, Eugene Ruggs, Tonkawa; four grandchildren; one great-grandchild and one brother, Donald Ruggs, Conroe, TX.

The TWENTY-THIRD PSALM

THE LORD IS MY SHEPHERD; I SHALL NOT WANT.
HE MAKETH ME TO LIE DOWN IN GREEN PASTURES:
HE LEADETH ME BESIDE THE STILL WATERS.
HE RESTORETH MY SOUL: HE LEADETH ME IN THE
PATHS OF RIGHTEOUSNESS FOR HIS NAME'S SAKE..
YEA, THOUGH I WALK THROUGH THE VALLEY OF
THE SHADOW OF DEATH, I WILL FEAR NO EVIL:
FOR THOU ART WITH ME; THY ROD AND THY STAFF
THEY COMFORT ME. THOU PREPAREST A TABLE
BEFORE ME IN THE PRESENCE OF MINE ENEMIES:
THOU ANOINTEST MY HEAD WITH OIL; MY CUP
RUNNETH OVER..SURELY GOODNESS AND
MERCY SHALL FOLLOW ME ALL THE DAYS
OF MY LIFE; AND I WILL DWELL IN THE
HOUSE OF THE LORD FOR EVER.....

ANN HATTIE FRISCH

ANN HATTIE FRISCH

Ann Hattie Frisch died at 9:17 a.m. Friday, Dec. 27, in Blackwell Regional Hospital. She was 86.

There will be a Christian Wake service at 7 p.m. Sunday in Roberts Funeral Home chapel with Rev. Joe Berger officiating.

The funeral mass is set for 10 a.m. Monday in St. Joseph Catholic Church in Blackwell with Rev. Berger, pastor, officiating.

Casketbearers will be Bill Jueschke, Leo Jueschke, Melvin Chermack, Neil Chermack, Joe Chermack and Randy Gabriel.

Burial will be in the Braman Cemetery.

Mrs. Frisch was a native of Waukomis, born there Feb. 18, 1905, the daughter of Joseph and Mary (Karel) Chermack. She grew up on the farm near Waukomis, attended White rural school and later Waukomis schools.

In 1936, she married Joseph Theodore Frisch in Bison and they settled on a farm northeast of Braman. After her husband's death July 4, 1970, she moved into Blackwell to make her home.

She was an active member of St. Joseph Catholic Church and the Altar Society.

Western Kay Red Cross Chapter honored her recently with the Clara Barton Award for outstanding volunteer service. Mrs. Frisch was one of the original Gray Ladies at the Blackwell hospital and had over 5,000 volunteer hours in Red Cross. She also was longtime volunteer in the hospital Auxiliary.

In addition, she was a member of Lowe Center Club.

Survivors are six grandchildren, six great-grandchildren; three sisters, Emma Neal and Mollie Jueschke, both of Ponca City, and Eve Stalder of Crescent and one brother, Fred Chermack of Blackwell.

Besides her husband, she was preceded in death by one son, Robert Frisch; two brothers, Joe Chermack and John Chermack, and three sisters, Bessie Nelligan, Mary Pekarek and Fannie Oliver.

The family has established a memorial in her name to Blackwell Regional Hospital. Contributions may be made directly through the hospital administration office or the funeral home, custodian of the fund.
